I. Harmonic Analysis on Homogeneous Spaces

V. F. Molchanov

Translated from the Russian
by G. van Dijk and V. F. Molchanov

Contents

§0. Introduction	3
Chapter 1. Harmonic Analysis on Homogeneous Spaces of Lie Groups	11
§1. Manifolds	11
§2. Lie Groups and Lie Algebras	12
§3. Homogeneous Spaces of Lie Groups	16
§4. Symmetric Spaces	18
§5. Semisimple Symmetric Spaces	21
§6. Riemannian Symmetric Spaces	26
§7. Invariant Differential Operators	28
§8. Unitary Representations of Class One	33
§9. Relative Discrete Series	39
§10. Gelfand Pairs	41
§11. Harmonic Analysis on Symmetric Spaces of the Non-Compact Type	45
§12. Harmonic Analysis on Symmetric Spaces of the Compact Type	52
§13. A Duality Principle	56
§14. Harmonic Analysis on Semisimple Symmetric Spaces	60

Chapter 2. Harmonic Analysis on Semisimple Symmetric Spaces of Rank One	62
§15. Semisimple Symmetric Lie Algebras of Rank One	63
§16. The Tangent Representation	68
§17. Orbits of the Group H on X	75
§18. The Averaging Map	78
§19. The Manifolds $\mathcal{Y}$ and S	83
§20. The Laplace-Beltrami Operator	85
§21. The Group V	87
§22. Orbits of the Group H on the Manifold S	89
§23. Representations of the Non-Unitary Principal Series	91
§24. Intertwining Operators	92
§25. Intertwining Operators on Simplest K -types	97
§26. Invariants of the Group H	99
§27. The Fourier and Poisson Transform. Spherical Functions	101
§28. Eigenfunctions of the Radial Part of the Laplace-Beltrami Operator	104
§29. Explicit Expressions for the Spherical Functions	108
§30. The Plancherel Formula	110
§31. The Case $r^+ = 1$	120
References	127
