Preface	XII
Acknowledgements	XIII
Editors' Notes on the Use of This Book	XIV

Chapter 1: Synthesis from a Different Perspective: How Nature Does It

George Britton, Synnøve Liaaen-Jensen and Hanspeter Pfander

A. Introduction	1
B. History of Carotenoid Biosynthesis	2
1. Starting with building blocks	2
2. Pathfinders	2
3. Sequence of successes	3
4. Areas of difficulty	4
5. Classical genetics	4
6. Success of sequences	5
7. Biosynthesis today	5
8. Biotechnology	6
C. Chemosystematics	6
D. Metabolism	6
1. What is metabolism?	6
2. Metabolism in animals	7
3. Carotenoids and colour in animals	8
4. Carotenoids in mammals	9
5. Carotenoids in humans	9
6. Carotenoids and vitamin A	10
7. Other metabolic processes in mammals	11
E. Questions of Nomenclature	11
F. Looking to the Future	12

Chapter 2: Overview of Carotenoid Biosynthesis

George Britton

A. Introduction	13
B. Carotenoid Biosynthesis and the Isoprenoid Pathway	14
C. Origin of the Isoprene Unit	16
1. The acetate - mevalonate pathway	16
2. Conversion of mevalonate into IDP	21
3. Formation of IDP by a route that does not involve mevalonate.....	22
4. Origin of the isoprene unit in chloroplasts and chromoplasts	24
D. Formation of Geranylgeranyl Diphosphate	25
1. Isomerization of IDP and DMADP	26
2. Chain elongation: prenyl transferases	29
3. GGDP synthase	30
E. Formation of Phytoene	30
1. Phytoene or lycopersene?.....	30
2. Prephytoene diphosphate.....	31
3. Phytoene synthase	32
4. (<i>E</i>)- or (15 <i>Z</i>)-Phytoene	32
5. Stereochemistry and mechanism	32
F. Desaturation	35
1. Geometrical isomerization and desaturation	36
2. Mechanism of desaturation	37
3. Biosynthesis of (<i>Z</i>)-isomers.....	39
G. Further Reactions of Acyclic End Groups	42
1. Hydroxy and methoxy carotenoids of phototrophic bacteria	42
2. Other modifications of the acyclic end group	52
H. Cyclization	54
1. General	54
2. Use of inhibitors	57
3. The cyclization reaction	58
4. Independent formation of the different ring types.....	61
5. Stereochemistry of cyclization	62
6. Stereochemistry of formation of the β ring	63
7. Formation of the ϵ and γ end groups	66
8. Formation of the ϵ ring.....	67
9. Stereochemistry of folding	69
I. Later Reactions of Cyclic End Groups	72

1. Formation of aromatic end groups	72
2. Introduction of oxygen functions	74
3. Esterification and glycosylation	83
J. Oxidation of Methyl Groups	84
1. Terminal methyl groups	85
2. Side-chain methyl groups, C(19) and C(20)	87
K. Modifications of the Polyene Chain	88
1. Acetylene and allene groups.....	88
2. Trinor carotenoids	89
3. Apocarotenoids.....	90
L. Biosynthesis of C₄₅- and C₅₀-Carotenoids	94
1. Acyclic compounds	94
2. Cyclic compounds	95
3. Stereochemistry of biosynthesis of C ₄₅ -and C ₅₀ -carotenoids	97
M. Enzymes of Carotenoid Biosynthesis.....	100
1. Plants	101
2. Algae	105
3. Fungi.....	105
4. Non-phototrophic bacteria.....	107
5. Phototrophic bacteria.....	108
6. Regulated enzymes.....	108
7. Over-expressed enzymes	108
N. Organization and Coordination of Carotenogenic Enzymes	110
1. One gene - one enzyme - one reaction	110
2. Membranes and complexes	112
3. Organization of the carotenogenic complex: the daffodil model	113
4. Factors that determine the end product	115
O. Inhibitors of Carotenoid Biosynthesis	117
1. General aspects.....	117
2. Mode of action.....	118
3. Inhibition of steps in the biosynthetic pathway	118
4. Inhibitors of carotenoids biosynthesis as herbicides	121
P. Effects of Environmental, Nutritional and Developmental Factors on Carotenoid Biosynthesis	122
1. Higher plants	123
2. Algae	129
3. Fungi.....	131
4. Phototrophic bacteria.....	135
5. Non-phototrophic bacteria.....	136

Q. Concluding Remarks	139
References	140

Chapter 3: Molecular Biology of Carotenoid Biosynthesis

Joseph Hirschberg

A. Introduction	149
B. Classical Genetics: Mutations that Affect Carotenoid Biosynthesis	149
C. Recombinant DNA Technology: an Overview	151
1. DNA vectors	152
2. Constructing DNA libraries	155
3. Screening a gene library for specific clones	156
4. Positional cloning	158
5. Cloning by gene tagging	158
6. Genomics	158
D. Application of Various Techniques for Cloning Genes Involved with Carotenoid Biosynthesis	159
1. Phototrophic bacteria	159
2. Non-phototrophic bacteria	161
3. Fungi	162
4. Cyanobacteria, algae and plants	164
E. Gene Sequence Databases	167
F. Characteristics of the Genes and Enzymes, as Deduced from Gene Cloning	168
1. Geranylgeranyl diphosphate synthase	168
2. Phytoene synthase	168
3. Phytoene desaturase and ζ -carotene desaturase	169
4. Cyclases	171
5. Hydroxylases	172
6. Epoxidation and deepoxidation	173
7. Capsanthin-capsorubin synthase	174
8. β -C(4)-Oxygenase	176
9. Formation of acyclic xanthophylls in phototrophic bacteria	176
10. Transit peptide sequences	177
11. Enzyme complexes	177
G. Regulation of Carotenoid Biosynthesis	177
1. Phototrophic bacteria	178

2. Photoregulation: <i>Myxococcus xanthus</i> and <i>Streptomyces setonii</i>	178
3. <i>Neurospora crassa</i>	178
4. Plants	178
5. Algae	180
6. Post-translational regulation	180
H. Phylogeny and Evolution of Carotenoid Biosynthesis Genes	181
I. Application of Carotenoid Genes in Biotechnology	183
References	191

Chapter 4: Degraded Carotenoids

Inger Wahlberg and Ann-Marie Eklund

A. Introduction	195
B. Absciscic Acid and its Metabolites	196
1. Introduction	196
2. Biosynthesis.....	196
3. Metabolism.....	199
C. Other Degraded Carotenoids	201
1. Structural diversity	201
2. Products of primary cleavage reactions.....	203
3. Products of secondary reactions	207
D. Concluding Remarks	212
References	213

Chapter 5: Carotenoids in Chemosystematics

Synnøve Liaaen-Jensen

A. Principles of Taxonomy and Chemosystematics	217
B. Carotenoids as Chemosystematic Markers	218
C. Approach and Parameters	219
D. Prokaryota: Eubacteria	220
1. Anoxygenic phototrophic bacteria	220
2. Oxygenic phototrophic bacteria	224
3. Non-phototrophic bacteria.....	226
E. Prokaryota: Archaea	230

1. Thermophilic archaea	230
2. Halophilic archaea	230
F. Eukaryota: Algae	230
1. Rhodophyta	233
2. Chromophyta	233
3. Euglenophyta	238
4. Chlorophyta	239
G. Eukaryota: Higher Plants	243
H. Eukaryota: Yeasts and Fungi	244
I. Scope and Limitations	244
J. Phylogenetic Implications	245
References	246

Chapter 6: Metabolism of Carotenoids in Mammals

Florian J. Schweigert

A. Introduction	249
B. Absorption of Carotenoids	252
1. Basic features of digestion	252
2. Digestive phase of the absorption of carotenoids	252
3. Uptake of carotenoids by intestinal cells	254
4. Bioavailability of carotenoids	254
5. Methods for determining efficiency of absorption	256
C. Intracellular Metabolism of Carotenoids	258
1. Absorption of intact carotenoids in humans	258
2. (<i>E/Z</i>)-Isomerization of β,β -carotene	262
3. Conversion of carotenoids into vitamin A	263
D. Transport of Carotenoids in Lymph and Blood Plasma	268
1. Incorporation into chylomicrons	269
2. Transport of carotenoids in blood plasma	269
E. Carotenoids in Tissues	271
1. Uptake and intracellular transport of carotenoids	271
2. Distribution of carotenoids in tissues	272
F. Removal of Carotenoids from the Body	276
1. Removal of carotenoids in urine and faeces	276
2. Transfer across the placenta	276

3. Transfer into milk	276
G. Conclusions	277
References	278

Chapter 7: Absorption and Metabolism of Carotenoids in Birds, Fish and Crustaceans

Katharina Schiedt

A. Introduction	285
1. Occurrence, functions and commercial applications	285
2. Scope of the Chapter	286
3. General features of absorption, transport and metabolic transformations of carotenoids	286
4. Carotenoids, vitamin A and vision	288
B. Birds	291
1. Carotenoids and coloration	291
2. Absorption and transport of carotenoids in the chicken	292
3. Distribution and deposition of carotenoids in tissues of the chicken	296
4. Deposition of carotenoids and metabolites in egg yolk	297
5. Molecular modifications of carotenoids in the chicken	305
6. Carotenoids in avian retinal oil droplets	309
7. Carotenoids in wild and captive birds	311
C. Fish	316
1. Carotenoids and coloration in fish	316
2. Absorption, transport and deposition of carotenoids in salmonids	317
3. Metabolic transformations of carotenoids in salmonids	321
4. Metabolic transformations in other fishes	328
5. Carotenoids in fish eggs and fry	333
6. Xanthophylls as vitamin A precursors in fish	340
7. Apocarotenoids in fish and invertebrates	344
D. Crustaceans	346
1. General considerations	346
2. Some commercially or biologically important examples of carotenoid deposition and transformations in crustaceans	347
E. Conclusion	351
References	352

Chapter 8: Carotenoids in Food Chains

Synnøve Liaaen-Jensen

A. Overview	359
B. Selected Food Chains Based on Microalgae	360
1. Sponges	360
2. Green algae - zooplankton.....	362
3. Microalgae – mussels – starfish	362
4. Microalgae – other molluscs and tunicates	365
5. Microalgae – fish	365
6. Microalgae – crustaceans – fish	367
C. Selected Food Chains Based on Higher Plants.....	368
1. Higher plants – insects	368
2. Higher plants – birds	369
D. Selected Food Chains Based on Fungi	370
1. Fungi – insects.....	370
E. Conclusion.....	370
References.....	371

Chapter 9: Guidance on Practical Strategies and Procedures

George Britton

Part I: Use of Radioactive and Stable Isotopes	373
A. Use of Isotopes: General Comments	373
B. Assay of Radioisotopes.....	374
1. Liquid scintillation counting: colour quenching	374
2. Sample purity and purification	375
C. Assay of Stable Isotopes.....	375
1. Mass Spectrometry	376
2. NMR spectroscopy	376
D. Experimental Strategies and Applications of Radioisotopes.	377
1. Single isotope labelling	377
2. Double-isotope methods: ^3H : ^{14}C ratios.	377
E. Experimental Strategies and Applications of Stable Isotopes.....	378
1. Carbon-13 (^{13}C)	378

2. Deuterium (^2H).....	382
3. Application of ^2H and ^{13}C labelling in studies of nutrition and metabolism.	386
Part II: Applications of Inhibitors	387
A. Culturing Micro-organisms in the Presence of an Inhibitor	387
B. Time-course Studies Following Removal of the Inhibitor	388
1. Practical points:	388
Part III: Cell-free and Enzyme Systems	389
A. Introduction.....	389
B. General Aspects	391
1. Choice of material	391
2. Extraction	391
3. Solubilization and fractionation.	392
4. Isolation and purification of individual enzymes	392
5. Incubations	392
6. Substrates.....	393
7. Assays.....	393
8. Storage.....	393
C. Selection of Procedures.....	393
D. Example 1: Higher Plants	394
1. Tomato (<i>Lycopersicon esculentum</i>)	394
2. Red pepper (<i>Capsicum annuum</i>)	396
3. Daffodil (<i>Narcissus pseudonarcissus</i>).....	398
E. Example 2: Fungi	399
1. <i>Phycomyces blakesleeana</i>	400
2. <i>Neurospora crassa</i>	401
F. Example 3: Bacteria	402
1. <i>Flavobacterium</i>	402
References.....	404
Index.....	405
