

Contents

1	Introduction	1
1.1	Hyperviscid Burgers Equation	2
1.2	Navier-Stokes Equation in Two Dimensions	5
1.3	Navier-Stokes Equation in Three Dimensions	7
1.4	Physical Applications	10
1.4.1	Renormalization Group Theory	10
1.4.2	Numerical Computation of Burgers Turbulence	11
2	Burgers Equation	13
2.1	Linear Results	15
2.2	Existence and Uniqueness Results	32
2.3	Approximation in Probability	39
2.4	Approximation in Expectation	43
2.5	Applications in Fluid Mechanics	49
3	Navier-Stokes Equation in Two Dimensions	55
3.1	Existence and Uniqueness Results	55
3.1.1	Formulation of the Problem	55
3.1.2	The Main Result	59
3.1.3	Local Existence	59
3.1.4	Global Existence	62
3.2	Approximation Results	65

3.2.1	Linear Results	66
3.2.2	Convergence in Probability	68
3.2.3	Convergence in Expectation	72
4	Navier-Stokes Equation in Three Dimensions	75
4.1	Existence and Uniqueness Results	75
4.1.1	Formulation of the Problem	75
4.1.2	A Local Existence Result	77
4.1.3	Global Existence	83
4.2	Approximation Results	92
4.2.1	Linear Results	93
4.2.2	Approximation of Local Solutions	94
4.2.3	Stopping Times in Local Approximation Theory	96
4.2.4	Global Approximation Results	99
