

Table of contents

1	Introduction	1
2	Single droplet drying.....	4
2.1	A short history of single droplet drying	4
2.2	Heat transfer	6
2.2.1	Conductive heat transfer	6
2.2.2	Convective heat transfer	6
2.2.3	Radiative heat transfer	7
2.3	Diffusion	11
2.3.1	Fick's first law of diffusion	12
2.3.2	Diffusion coefficients for gases	12
2.3.3	Convective mass transfer.....	13
2.4	Mass transfer theories.....	13
2.5	Evaporation of pure solvent droplets	14
2.5.1	Evaporation of a single droplet.....	14
2.5.2	The d^2 -law	15
2.5.3	Diffusion-controlled evaporation of single droplets.....	16
2.5.4	Evaporation of droplets containing solvent mixtures	16
2.6	Evaporation of solution and suspension droplets	17
2.6.1	Drying stages of solution and suspension droplets.....	17
2.6.2	Particle formation	20
2.6.3	Models for the drying of single droplets containing solids.....	22
3	Acoustic levitation	24
3.1	History and application of acoustic levitation	24
3.2	A short introduction to acoustics	25
3.3	Levitation forces.....	27
3.3.1	Standing acoustic wave	27
3.3.2	Interaction of ultrasonic wave and droplet.....	28
3.4	Acoustic streaming.....	29
3.4.1	Inner acoustic streaming.....	29

3.4.2	Outer acoustic streaming	30
3.5	Vertical position of the levitated droplet.....	31
3.6	Temperature of the levitation system.....	32
3.7	Single droplet drying using an acoustic levitator	32
3.7.1	Pure solvent droplets	32
3.7.2	Solution and suspension droplets.....	35
4	Materials and Methods	37
4.1	Materials	37
4.1.1	Proteins	37
4.1.1.1	Carbonic anhydrase	37
4.1.1.2	L-Lactic dehydrogenase	39
4.1.1.3	Trypsinogen and Trypsin.....	40
4.1.2	Itraconazole	41
4.1.3	Excipients and reagents	42
4.2	Methods	44
4.2.1	Acoustic levitation.....	44
4.2.2	Microdispensing system	48
4.2.3	Droplet size measurements	51
4.2.4	Droplet surface temperature measurements	51
4.2.5	Spray drying.....	52
4.2.6	Scanning electron microscopy	53
4.2.7	Enzyme activity assay of carbonic anhydrase	53
4.2.8	Enzyme activity assay of L-lactic dehydrogenase.....	54
4.2.9	Enzyme activity assay of trypsinogen.....	55
5	Results and Discussion	57
5.1	Preliminary experiments using the IR-camera	57
5.1.1	Heating-up of the levitation system	57
5.1.2	Influence of droplet size on the surface temperature measurement	58
5.1.3	Determination of emissivities	64
5.2	Evaporation of pure solvent droplets	67
5.2.1	Evaporation of pure water droplets	67

5.2.1.1	Influences of the initial droplet size on the evaporation process	67
5.2.1.2	Influence of the drying air stream on the evaporation process	84
5.2.2	Evaporation of pure organic solvent droplets.....	96
5.2.3	Evaporation of droplets containing solvent mixtures	103
5.3	Evaporation of excipient solution droplets.....	110
5.3.1	Trehalose solution droplets.....	110
5.3.2	Mannitol solution droplets.....	121
5.3.3	Sucrose solution droplets.....	133
5.3.4	Copolyvidone and HPMC solution droplets	136
5.4	Itraconazole formulation experiments.....	141
5.5	Drying of protein solutions.....	148
5.5.1	Bovine carbonic anhydrase (bCA) droplets	148
5.5.1.1	bCA-trehalose 10 % (w/v) total solids formulations	151
5.5.1.2	bCA 10 % (w/v) plus trehalose formulations	157
5.5.2	L-Lactic dehydrogenase (LDH) droplets	161
5.5.2.1	LDH-trehalose 10 % (w/v) total solids formulations.....	163
5.5.2.2	LDH 10 % (w/v) plus trehalose formulations	170
5.5.3	Trypsinogen droplets	174
6	Summary and Conclusions	177
7	Zusammenfassung	182
8	References	188
