ABSTRACT	4
ZUSAMMENFASSUNG	5
STRESZCZENIE	6
I. INTRODUCTION	7
II. MATERIAL AND METHODS	9
1 The study area	9
2 Geological development of the study area	10
3 The material studied	13
3.1 Description of the cores studied	16
3.2 Age of the sediments	18
III. RESULTS	20
1 Fossil diatom flora	20
1.1 Cores from a deep water area	20
1.2 Cores from a shallow water area	41
2 Subfossil diatom flora	46
3 Recent diatom flora	54
3.1 Coastal shallows (supralittoral and littoral) assemblage	55
3.2 Sublittoral assemblage	59
3.3 Deep water (pelagic) assemblage	62
3.4 Anthropogenic assemblage	63
4 Diatom taxa found in the sediments studied	66
4.1 Centrales	66
4.2 Pennales	83
IV. DISCUSSION	188
1 The Baltic fossil diatom flora	188
1.1 The Yoldia Sea	188
1.2 The Ancyclus Lake	191
1.3 The Mastogloia Sea	194
1.4 The Litorina Sea	197
1.5 The Postlitorina	201
2 The subfossil flora	203
3 The recent flora	207
V. CONCLUDING REMARKS	213
VI. REFERENCES	218
