

Contents

1	The Concept of Continuum and Kinematics	1
1.2	Kinematics	1
Problem 1.2-1	Calculation of material coordinates for given pathlines	1
Problem 1.2-2	Velocity and acceleration in material and spatial coordinates with given pathlines .	2
Problem 1.2-3	Material description of a potential vortex flow	5
Problem 1.2-4	Material description of an axisymmetric stagnation point flow	7
Problem 1.2-5	Pathlines, streamlines, and streaklines of an unsteady flow field	9
Problem 1.2-6	Kinematics of an irrotational and divergence free flow field	14
Problem 1.2-7	Kinematics of an unsteady, plane stagnation point flow	19
Problem 1.2-8	Streakline of a water jet	23
Problem 1.2-9	Streamlines and Streaklines in cylindrical coordinates	26
Problem 1.2-10	Streamlines and pathlines of standing gravity waves	29
Problem 1.2-11	Change of material line elements in a Couette-flow	31
Problem 1.2-12	Change of material line elements in a three-dimensional flow	34
Problem 1.2-13	Angular velocity vector and the change of material line elements in a two-dimensional flow field	38

Problem 1.2-14	Rate of deformation and spin tensors of an unsteady two-dimensional flow	43
Problem 1.2-15	Time change of the kinetic energy of a fluid body	45
2	Fundamental Laws of Continuum Mechanics	50
2.1	Conservation of Mass, Equation of Continuity	50
Problem 2.1-1	One-dimensional unsteady flow with given density field	50
Problem 2.1-2	Plane, steady flow with a given density field	52
Problem 2.1-3	Velocity at the exit of a container	54
Problem 2.1-4	Steady flow through a circular channel	56
Problem 2.1-5	Squeeze film flow	58
Problem 2.1-6	Moving Piston	60
Problem 2.1-7	Flow between two inclined flat plates	63
Problem 2.1-8	Oscillating journal bearing	65
Problem 2.1-9	Effect of boundary layer displacement thickness	68
Problem 2.1-10	Flow through a diffuser with a linear velocity change in flow direction	71
Problem 2.1-11	Temperature boundary layer along a cold wall	73
Problem 2.1-12	Flow in a lubrication gap	74
2.2	Balance of Momentum	78
Problem 2.2-1	Principal axes of a stress tensor	78
Problem 2.2-2	Fluid forces on a manifold	80
Problem 2.2-3	Calculation of drag force	82
Problem 2.2-4	Force on a slender nozzle	85
2.3	Balance of Angular Momentum	87
Problem 2.3-1	Torque on pipe with slot	87
Problem 2.3-2	Moment exerted on the inlet guide vanes of a water turbine	90
Problem 2.3-3	Curvature radius of circular arc profiles of a circular cascade	93
2.4	Momentum and Angular Momentum in an Accelerating Frame	96
Problem 2.4-1	Fluid sprayed on a rotating disk	96
Problem 2.4-2	Velocity of a moving container with a nozzle	100
Problem 2.4-3	Acceleration and velocity of a rocket	107
Problem 2.4-4	Thrust reversal	109
Problem 2.4-5	Torque on a rotating bent pipe	111
Problem 2.4-6	Thrust of a jet engine	114

2.5	Applications to Turbomachines	117
Problem 2.5-1	Circulation around a blade profile in a circular cascade	117
Problem 2.5-2	Axial turbine stage	119
Problem 2.5-3	Kaplan turbine	121
Problem 2.5-4	Torque converter	125
Problem 2.5-5	Balancing of axial thrust	129
2.6	Conservation of Energy	131
Problem 2.6-1	Cylinder with heat flux	131
Problem 2.6-2	Energy balance in an axial turbine stage	134
3	Constitutive equations	138
Problem 3-1	Velocity of a raft	138
Problem 3-2	Energy balance in a journal bearing	140
Problem 3-3	Pressure driven flow of paper pulp	144
Problem 3-4	Flow of a non-Newtonian fluid	146
Problem 3-5	Extensional flow	148
4	Equation of Motion for Particular Fluids	152
4.1	Newtonian Fluids	152
Problem 4.1-1	Poiseuille flow	152
Problem 4.1-2	Temperature distribution in a Poiseuille flow	156
Problem 4.1-3	Pressure driven flow in a channel with porous walls	159
Problem 4.1-4	Boundary layer suction	161
Problem 4.1-5	Mixing of streams of fluids	165
Problem 4.1-6	Drag on a flat plate	168
Problem 4.1-7	Two-dimensional water jet impinging on a wedge	173
Problem 4.1-8	Rigid body rotation and potential vortex	175
Problem 4.1-9	Energy balance in a potential vortex flow	180
4.2	Inviscid flow	184
Problem 4.2-1	Pressure and energy increase of fluid in a centrifugal pump	184
Problem 4.2-2	Pressure distribution within a spiral casing	189
Problem 4.2-3	Free surface in a potential vortex	190
Problem 4.2-4	Circulation in a Couette flow	192
Problem 4.2-5	Velocity induced by a vortex ring	193
Problem 4.2-6	Two infinitely long vortex filaments near a wall	194

Problem 4.2-7	Wing with an elliptic spanwise distribution of circulation	198
Problem 4.2-8	Airfoil in parallel flow	201
Problem 4.2-9	Jet angle in a Betz diffuser	204
Problem 4.2-10	Contraction coefficient of a Borda mouth-piece	206
Problem 4.2-11	Pressure distribution in an inviscid and axisymmetric flow	208
Problem 4.2-12	Increase of static pressure in a Betz diffuser	210
Problem 4.2-13	Fluid flowing out of a tank	212
Problem 4.2-14	Air bubble moving in a channel	214
Problem 4.2-15	Aircraft above the ground	217
Problem 4.2-16	Flow between two rotating cylinders, circulation and vorticity	223
Problem 4.2-17	Power of a Pelton turbine	225
4.3	Initial and Boundary Conditions	230
Problem 4.3-1	Oscillation of an elliptic cylinder in fluid .	230
Problem 4.3-2	Flat plate with a pitching and oscillating motion	231
Problem 4.3-3	Rotating cylinder moving through fluid .	232
Problem 4.3-4	Vortical flow inside an elliptic cylinder . .	234
5	Hydrostatics	236
5.1	Hydrostatic Pressure Distribution	236
Problem 5.1-1	U-tube manometer	236
Problem 5.1-2	Hydraulic safety clutch	237
Problem 5.1-3	Rotating container filled with fluid	239
Problem 5.1-4	Centrifugal casting process	241
Problem 5.1-5	Depth gauge	242
5.2	Hydrostatic Lift, Force on Walls	244
Problem 5.2-1	Force and moment on a throttle valve . .	244
Problem 5.2-2	Half sphere closing an orifice	246
Problem 5.2-3	Force on a dam	248
Problem 5.2-4	Half sphere cup sealing by its own weight	250
Problem 5.2-5	Cylindrical submarine	252
Problem 5.2-6	Car under water	254
6	Laminar Unidirectional Flow	257
Problem 6-1	Flow in an annular gap	257
Problem 6-2	Crude oil transport through pipeline . . .	261
Problem 6-3	Oscillating pipe flow	264

Problem 6-4	Comparison of a Couette-Poiseuille flow of a Newtonian fluid, a Stokes fluid, and a Bingham material	267
7	Fundamentals of Turbulent Flows	274
Problem 7-1	Turbulent Couette flow	274
Problem 7-2	Velocity distribution in turbulent Couette flow with given Reynolds number	277
Problem 7-3	Turbulent pipe flow	278
Problem 7-4	Crystal growth on pipe walls	280
Problem 7-5	Comparison of momentum and energy flux in laminar and turbulent flow in a pipe	282
Problem 7-6	Velocity distribution in a turbulent pipe flow resulting from the Blasius friction law	285
Problem 7-7	Location of a pipe leakage	287
Problem 7-8	Cooling of superheated steam by water injection	289
8	Hydrodynamic Lubrication	293
Problem 8-1	Bearing with step slider	293
Problem 8-2	Friction torque transmitted by the shaft to the journal	297
Problem 8-3	Slider load in squeeze flow: Comparison between different slider geometries	299
9	Stream filament theory	302
9.1	Incompressible Flow	302
Problem 9.1-1	Rotating tube acting as pump	302
Problem 9.1-2	Volume flux through an orifice	305
Problem 9.1-3	Injector pump	306
Problem 9.1-4	Radial pump	308
Problem 9.1-5	Bulb turbine	312
Problem 9.1-6	Coanda effect	315
Problem 9.1-7	Principle of a shaped charge	316
Problem 9.1-8	Penstock and nozzle of a Pelton turbine	319
Problem 9.1-9	Operating characteristic of a fan	321
Problem 9.1-10	Water power plant	325
Problem 9.1-11	Flow through an exhaust gas analyser	328
Problem 9.1-12	Flow deflection through a screen	329
Problem 9.1-13	Hovercraft	331
Problem 9.1-14	Wind turbine	333

Problem 9.1-15	Discharge pipe of a reservoir: Comparison between different pipe geometries	337
Problem 9.1-16	Vibrating system consisting of a fluid column and a spring suspended piston	339
Problem 9.1-17	Unsteady flow in a tube with flexible walls	343
Problem 9.1-18	Plunger pump	346
Problem 9.1-19	Flow within an urethra prothesis	350
9.2	Steady Compressible Flow	352
Problem 9.2-1	Force on a plate in subsonic flow	352
Problem 9.2-2	Channel flow with heat addition	355
Problem 9.2-3	Normal shocks in an inlet guide vane	358
Problem 9.2-4	Blunt body in supersonic flow	363
Problem 9.2-5	Shock waves in the divergent part of a Laval nozzle	365
Problem 9.2-6	Supersonic nozzle in a spinneret	367
Problem 9.2-7	Ram jet in subsonic flow	370
Problem 9.2-8	High speed train in a tunnel	373
Problem 9.2-9	Labyrinth seal of a turbomachine	376
Problem 9.2-10	Gas flow through an orifice	379
9.3	Unsteady Compressible Flow	381
Problem 9.3-1	Traveling normal shock in a pipe	381
Problem 9.3-2	Shock tube	383
Problem 9.3-3	Motion of a piston in a tube	386
Problem 9.3-4	Reflection of a normal shock wave at the open end of a tube	389
Problem 9.3-5	Principle of an expansion tube	392
Problem 9.3-6	Propagation of acoustic waves in a closed tube	394
10	Potential Flow	399
10.3	Incompressible Potential Flow	399
Problem 10.3-1	Expanding sphere	399
Problem 10.3-2	Sphere in a translational flow	402
Problem 10.3-3	Flow near the stagnation point of a body in parallel flow	406
Problem 10.3-4	Point source in a rotationally symmetric stagnation point flow	409
Problem 10.3-5	Point source above an impermeable wall	412
Problem 10.3-6	Source distribution in parallel flow	414
Problem 10.3-7	Expanding sphere in an inviscid and in a viscous flow	416

Problem 10.3-8	Growth of a vapor filled cavity	420
Problem 10.3-9	Contraction coefficient for a circular orifice	423
Problem 10.3-10	Sphere rising in water	427
Problem 10.3-11	Unsteady motion of a cylinder perpendicular to its axis	430
Problem 10.3-12	Rotor oscillating in an inviscid fluid	432
10.4	Plane Potential Flow	436
Problem 10.4-1	Flow in the squeeze gap between a moving piston and a wall	436
Problem 10.4-2	Sink distribution in a stagnation point flow	439
Problem 10.4-3	Circle theorem	442
Problem 10.4-4	Half cylinder in stagnation point flow	447
Problem 10.4-5	Dipol flow around a circular cylinder	451
Problem 10.4-6	Flow around a thin plate	454
Problem 10.4-7	Airfoil over a fixed wall	457
Problem 10.4-8	Semi infinite body in a channel	461
Problem 10.4-9	Kármán's vortex street	464
Problem 10.4-10	Joukowski mapping of a circular cylinder in a uniform flow	467
Problem 10.4-11	Plane circular cascade	470
Problem 10.4-12	Schwarz-Christoffel transformation of a wall of infinite extent	473
Problem 10.4-13	Schwarz-Christoffel transformation of a convergent channel	476
Problem 10.4-14	Cavitation in a channel	480
Problem 10.4-15	Representation of a slender body by a source distribution	483
Problem 10.4-16	Distribution of vortex intensity and mean camber line of a slender airfoil	488
Problem 10.4-17	Straight cascade	492
Problem 10.4-18	Vortex distribution of a flat-plate cascade	497
Problem 10.4-19	Compressible flow over a wavy wall	503
11	Supersonic Flow	509
11.1	Oblique Shock Waves	509
Problem 11.1-1	Wedge with a thin plate in front of it	509
Problem 11.1-2	Inlet of a plane channel	511
11.3	Reflection of Oblique Shock Waves	514
Problem 11.3-1	Flow over a wedge in a supersonic wind tunnel	514
Problem 11.3-2	Supersonic flow in a convergent channel	516

Problem B-13	Liquid in container	574
Problem B-14	Sluice gate	575
Problem B-15	Pressure driven flow in the radial gap between two concentric ring plates	576
Problem B-16	Pressure driven channel flow with variable viscosity	577
Problem B-17	Temperature induced flow	578
Problem B-18	Shock absorber	579
Problem B-19	Frequency of a Helmholtz resonator	580
Problem B-20	Chamber and exhaust pipe of an internal combustion engine	582
Problem B-21	Pump-turbine storage plant	583
Problem B-22	Overexpanded Laval nozzle	584
Problem B-23	Nozzle inlet	585
Problem B-24	Solid propellant rocket engine	586
Problem B-25	Ram jet	587
Problem B-26	Ludwig-tube	588
Problem B-27	Dipole above an impermeable wall	589
Problem B-28	Virtual mass of a thin plate	591
Problem B-29	Removal of liquid through a plane channel	592
Problem B-30	Unsteady flow over a wavy wall	593
Problem B-31	Wing section for given source and vortex distribution	594
Problem B-32	Infinitely thin plate with aileron	595
Problem B-33	Supersonic inlet	596
Problem B-34	Infinitely thin, flat plate in two-dimensional supersonic flow	598
Problem B-35	Guide vane cascade of a supersonic compressor	599
Problem B-36	Boundary layer on a foil	600
