

TABLE OF CONTENTS

Introduction	ix
<u>Chapter I. Introduction and motivation: theta functions in one variable</u>	1
§1. Definition of $\vartheta(z, \tau)$ and its periodicity in z	1
§2. $\vartheta(x, it)$ as the fundamental periodic solution to the Heat equation	4
§3. The Heisenberg group and theta functions with characteristics	5
§4. Projective embedding of $\mathbb{C}/\mathbb{Z} + \mathbb{Z}\tau$ by means of theta functions	11
§5. Riemann's theta relations	14
§6. Doubly periodic meromorphic functions via $\vartheta(z, \tau)$	24
§7. The functional equation of $\vartheta(z, \tau)$	28
§8. The Heat equation again	33
§9. The concept of modular forms	34
§10. The geometry of modular forms	44
§11. ϑ as an automorphic form in 2 variables	53
§12. Interpretation of H/Γ_0 as a moduli space	60
§13. Jacobi's derivative formula	64
§14. Product expansion of ϑ and applications	66
§15. Representation of an integer as sum of squares	74
§16. Theta and Zeta	83
§17. Hurwitz maps	92
Appendix: Structure of the inverse limit \mathcal{H}	95
§18. Hecke operators	103
<u>References and Questions</u>	116
 <u>Chapter II. Basic results on theta functions in several variables</u>	 118
§1. Definition of ϑ and its periodicity in \vec{z}	118
§2. The Jacobian variety of a compact Riemann surface	135
§3. ϑ and the function theory on a compact Riemann surface	146
Appendix: The meaning of Δ	162
§4. Siegel's symplectic geometry	171
§5. ϑ as a modular form	189
Appendix: Generators of $\mathrm{Sp}(2g, \mathbb{Z})$	202
§6. Riemann's theta formula and theta functions associated to a quadratic form	211
§7. Theta functions with harmonic coefficients	227
