

CONTENTS.

Ch.1. AN ELEMENTARY INTRODUCTION TO ALGEBRAIC TOPOLOGY

1.1. Introduction	1
1.2. Some examples	2
1.3. Topology of Defects (the case of planar spins)	4
1.4. The Fundamental Group	8
1.5. The Abstract Fundamental Group. Conjugacy Classes and Freely Homotopic Loops	18
1.6. The Order-Parameter Space as a Coset Space	28
1.7. Preliminary Theorems Concerning Fundamental Groups	42
1.8. Higher Homotopy Groups	46
1.9. Relative Homotopy and Relative Homotopy Groups	57
1.10. The Exact Homotopy Sequence	58

Ch.2. TOPOLOGICAL METHODS IN CLASSICAL FIELD THEORY

2.1. Introduction	67
2.2. The Pontrjagin Index and the Hopf Invariant	74

2.3. The $SO(3)$ Nonlinear Sigma-Models in One and Two Space Dimensions	85
2.4. The $d=2$ $SO(3)$ Nonlinear Sigma-Model as a Gauge Theory	95
2.5. The Ginzburg-Landau Theory of Superconductivity	104

Ch.3. INEQUIVALENT QUANTIZATIONS IN MULTIPLY CONNECTED SPACES. BRAID GROUPS AND ANYONS

3.1. Introduction	114
3.2. Quantum Mechanics in Nonsimply-connected Spaces	117
3.3. The Case of Identical Particles	124
3.4. Dynamical Implementation of Braid Statistics	135

Ch.4. TOPICS IN CHERN-SIMONS PHYSICS

4.1. Introduction	145
4.2. Chern-Simons Lagrangians	146
4.3. Charged Particles Interacting with a CS Field	153
4.4. Gauge Fixing and an Explicit Solution for A_μ	159
4.5. Effective Lagrangian for (Statistical) Particle Interaction	167

Ch.5. A SHORT INTRODUCTION TO CONNECTIONS ON $U(1)$ BUNDLES AND TO BERRY'S PHASE

5.1. Introduction	172
--------------------------	------------

5.2. Light Polarization, the Hopf Bundle and Pancharatnam's Phase	173
5.3. The Quantum Adiabatic Phase	181

**Ch.6. ELECTRONS IN A MAGNETIC FIELD, AND A CURSORY
LOOK AT THE QUANTUM HALL EFFECT**

6.1. Introduction	191
6.2. Preliminaries	194
6.3. The Classical Hall Effect	201
6.4. Bloch Electrons in a Magnetic Field	203
6.5. The Integer Quantum Hall Effect	210
6.6. The Fractional Quantum Hall Effect	217
6.7. Fractionally-Charged Quasiparticles and the Hierarchy of Quantum Hall States	222
