Nomenclature	v
Abstract	xi
Kurzfassung	xiii
1 Introduction	1
1.1 Motivation	1
1.2 Problem Statement	7
1.3 State of the Art	7
1.4 Research Contributions	12
1.5 Structure of the Thesis	13
2 Geometrical Modeling of Helicopter Main Rotor Vibrations	15
2.1 General Properties of Rotor Blade Dynamics	16
2.2 Steady-State Transfer Behavior of Linear Time-Periodic Systems	22
2.3 Geometrical Modeling of Helicopter Main Rotor Vibrations .	30
3 Systematic Main Rotor Vibrations	39
3.1 Geometrical Model of Systematic Main Rotor Vibrations . . .	40
3.2 Analysis of Systematic Main Rotor Vibrations	57
4 Reduction of Systematic Vibration Through Individual Blade Control	67
4.1 Methods for IBC Vibration Reduction	68
4.2 Quasi-Steady Transfer Model for Individual Blade Control . .	72
4.3 Vibration Reduction Potential of an IBC System	74

4.4	Influence of the Number of Blades on Active Vibration Reduction	78
5	Random Main Rotor Vibrations	83
5.1	Stochastic Geometric Model for Random Main Rotor Vibration	84
5.2	Analysis of Random Main Rotor Vibrations	85
5.3	Influence of Number of Rotor Blades on Random Main Rotor Vibrations	99
6	Active Reduction of Random Vibration Using Individual Blade Control	103
6.1	In-Flight Tracking Control on a Four-Bladed Rotor	104
6.2	Ideal Rotor Model and Transfer Path Analysis	108
6.3	Control Algorithm for the N-Bladed Rotor	122
6.4	Closed-Loop Simulation	142
7	Summary and Outlook	157
	List of Figures	163
	Bibliography	165
