Preface IX

1	Introduction	1
1.1	Spin	2
1.2	Spin-1/2 Basics	3
1.3	Quantum Dots	7
1.3.1	Spin-Based Quantum Information Processing with Artificial Atoms	8
1.3.2	Optically Active Quantum Dots	11
1.3.3	“Natural” Quantum Dots	11
2	Optically Active Quantum Dots: Single and Coupled Structures	15
2.1	Epitaxial Quantum Dots	15
2.2	“Natural” Quantum Dots Revisited	18
2.2.1	Structure and Fabrication	18
2.2.2	Energy Levels and Optical Transitions	19
2.3	Self-Assembled Quantum Dots	21
2.3.1	Strain-Driven Self-Alignment	22
2.3.2	Optical Properties and QD Shell Structure	24
2.4	Alternative Epitaxial Quantum Dot Systems	27
2.4.1	Electrically Gated Quantum Dots	27
2.4.2	Advanced MBE Techniques	29
2.4.3	Nanowire Quantum Dots	31
2.5	Chemically-Synthesized Quantum Dots	32
2.5.1	Colloidal Growth	33
2.5.2	Energy Level Structure and Optical Properties	34
3	Theory of Confined States in Quantum Dots	39
3.1	Band Structure of III–V Semiconductors	39
3.1.1	Effective Mass of Crystal Electrons	40
3.1.2	Spin–Orbit Interaction	41
3.1.3	Band Structure Close to the Band Edges	41
3.1.4	Band-Edge Bloch States	42
3.1.5	Coupling of Bands and the Luttinger Hamiltonian	43

3.1.6	Splitting of Heavy Hole and Light Hole Bands	46
3.1.7	Electrons and Holes	47
3.2	Quantum Confinement	47
3.2.1	One-Dimensional Confinement	48
3.2.2	Quantum Dot Confinement	48
3.3	Spherical Quantum Dot Confinement	49
3.3.1	Conduction-Band States	50
3.3.2	Valence Band States	53
3.3.3	Deviations from a Spherical Dot Shape	55
3.4	Parabolic Quantum Dot Confinement	55
3.5	Extensions of the Noninteracting Single-Electron Picture	57
3.5.1	Symmetry of Many-Particle States in Quantum Dots	57
3.5.2	Coulomb Interaction	58
3.5.3	The Concept of Excitons in Quantum Dots	59
3.5.4	Carrier Configurations in the s Shell and Energies	60
3.6	Few-Carrier Spectra of Self-Assembled Quantum Dots	61
3.6.1	From Ensemble to Single Quantum Dot Spectra	61
3.6.2	Transition Energies of Few-Particle States	63
4	Integration of Quantum Dots in Electro-optical Devices	67
4.1	Tuning Quantum Dots by Electric Fields	67
4.1.1	Semiconductor Diodes	67
4.1.2	Voltage-Controlled Number of Charges	69
4.1.3	Optically Probing Coulomb Blockade	71
4.1.4	Quantum Confined Stark Effect	73
4.2	Optical Cavities	77
5	Quantum Dots Interacting With the Electromagnetic Field	83
5.1	Hamiltonian for Radiative Transitions of Quantum Dots	83
5.1.1	Electromagnetic Field	83
5.1.2	Nonrelativistic Electron–Photon Interaction	84
5.1.3	Total Hamiltonian for a Quantum Dot and a Field	85
5.2	Electric Dipole Transitions	86
5.2.1	Electric Dipole Selection Rules	88
5.2.2	Interband Transitions in a III–V Semiconductor	89
5.2.3	Equivalent Classical Electric Dipole Picture	91
5.2.4	Semiclassical Interaction with a Laser Field	92
5.3	Magnetic Dipole Transitions	93
5.4	Generalized Master Equation of the Driven Two-Level System	93
5.4.1	The Driven Two-Level System	94
5.4.2	System-Reservoir Approach	94
5.5	Cavity Quantum Electrodynamics	97
5.5.1	Strong Coupling Regime	98
5.5.2	Weak Coupling Regime	99

5.6	Dispersive Interaction	100
5.6.1	Lamb Shift and AC Stark Shift	100
5.6.2	Two Emitters Interacting with a Cavity	102
6	Spin–spin Interaction in Quantum Dots	103
6.1	Electron–Electron–Spin Interaction	103
6.2	Electron–Hole Exchange Interaction	104
6.2.1	Exciton Fine Structure	105
6.2.2	Biexcitons and Polarization-Entangled Photons	107
6.3	Hyperfine Interaction	109
7	Experimental Methods for Optical Initialization, Readout, and Manipulation of Spins	111
7.1	Optical Spin Initialization	112
7.1.1	Nonresonant Spin Pumping	114
7.1.2	Resonant Spin Pumping	117
7.1.3	Nuclear Spin Pumping	120
7.2	Optical Spin Readout	123
7.2.1	Time-Resolved Photoluminescence	124
7.2.2	Spin Storage and Retrieval	125
7.2.3	Magnetic Ions	130
7.2.4	Spin-Selective Absorption	132
7.3	Observation of Spin Coherence and Optical Manipulation	134
7.3.1	The Hanle Effect	134
7.3.2	Ensemble Hanle Effect	135
7.3.3	Hanle Effect Measurement of a Single Quantum Dot	137
7.3.4	Time-Resolved Faraday Rotation Spectroscopy	140
7.3.5	Coherent Spin Echos – Measurement of T_2	145
7.3.6	Single Spin Kerr Rotation Measurement	148
7.3.7	Time-Resolved Observation of Single Spin Coherence	153
7.3.8	Optical Spin Manipulation	157
7.3.9	Putting It All Together	163
8	Controlling Charge and Spin Excitations in Coupled Quantum Dots	167
8.1	Tunable Coupling in a Quantum Dot Molecule	167
8.1.1	A Toy Model for Coupled Systems: The Two-Site Hubbard Model	167
8.1.2	An Exciton in a QD Molecule: A Coupled System	170
8.2	Molecular Theory of Confined States in Coupled Quantum Dots	173
8.3	Optically Probing Spin and Charge Excitations in a Tunable Quantum Dot Molecule	174
8.3.1	Optical Response with Initial and Final State Couplings	174
8.3.2	Electric Field Induced Coupling of Charged Trions in a QD Molecule	177
8.4	Future Directions	180

Appendix A Valence Band States for Spherical Confinement 183

Appendix B List of Constants 187

Appendix C Material Parameters 189
