

Contents

Preface	v
Acknowledgments	vii

I. Basics of Molecular Biology

1. Human Genome	3
The Genetic Message • The Genetic Code • Anatomy of a Gene • Physical Organization of the Genome • Human Genome Project	
2. Gene Regulation and Expression	19
Overview • DNA Replication • Gene Expression • Transcription • Translation • Antisense Oligonucleotides	
3. Tools of Recombinant DNA Technology	29
Restriction Enzymes • Southern Blot • Northern and Western Blots • In Situ Hybridization • Labeling Nucleic Acid Probes • Polymerase Chain Reaction • Cloning • Transgenic Animals • Conclusions	

II. Molecular Approach to Disease

4. Infectious Diseases	55
Introduction • Detection of Microorganisms by DNA Probes • Advantages and Disadvantages of Molecular	

	Detection • Examples of Molecular Diagnostic Applications • Microbial DNA Testing in Development • AIDS • Epidemiology of Infectious Diseases • Antisense Oligonucleotides as Antimicrobial Agents • Conclusions	
5.	Genetic Diseases	77
	Introduction • Basic Genetics • DNA Fingerprinting • Hemophilia • Cystic Fibrosis • Sickle Cell Anemia • Issues Surrounding Molecular Prenatal Diagnosis • Familial Hypercholesterolemia • Mitochondrial Eve—An Aside • Conclusions	
6.	Immune System and Blood Cells	103
	Introduction • Molecular Biology of the Immune System • Hematopoiesis • Bone-Marrow Transplantation • The First Human Gene Transplant • Future Directions	
7.	Cancer	121
	Introduction • Carcinogenesis • DNA Repair • Oncogenes • Anti-Oncogenes, Tumor Suppressor Genes • Colon Cancer: Model of a Multistep Process • Lymphoma, Leukemia • Other Solid Tumors • Future Directions	
8.	Environmental Medicine	157
	Environmental Pathogens • Molecular Testing of Environmental Pathogens	
	Conclusion	169
	Index	171
