

Structure of Lie Groups and Lie Algebras

V. V. Gorbatsevich, A. L. Onishchik, E. B. Vinberg

Translated from the Russian
by V. Minachin

Contents

Introduction	7
Chapter 1. General Theorems	8
§1. Lie's and Engel's Theorems	8
1.1. Lie's Theorem	8
1.2. Generalizations of Lie's Theorem	10
1.3. Engel's Theorem and Corollaries to It	11
1.4. An Analogue of Engel's Theorem in Group Theory	12
§2. The Cartan Criterion	13
2.1. Invariant Bilinear Forms	13
2.2. Criteria of Solvability and Semisimplicity	13
2.3. Factorization into Simple Factors	14
§3. Complete Reducibility of Representations and Triviality of the Cohomology of Semisimple Lie Algebras	15
3.1. Cohomological Criterion of Complete Reducibility	15
3.2. The Casimir Operator	15
3.3. Theorems on the Triviality of Cohomology	16
3.4. Complete Reducibility of Representations	16
3.5. Reductive Lie Algebras	17
§4. Levi Decomposition	18
4.1. Levi's Theorem	18
4.2. Existence of a Lie Group with a Given Tangent Algebra	19
4.3. Malcev's Theorem	20
4.4. Classification of Lie Algebras with a Given Radical	20
§5. Linear Lie Groups	21

5.1.	Basic Notions	21
5.2.	Some Examples	22
5.3.	Ado's Theorem	24
5.4.	Criteria of Linearizability for Lie Groups. Linearizer	24
5.5.	Sufficient Linearizability Conditions	25
5.6.	Structure of Linear Lie Groups	27
§6.	Lie Groups and Algebraic Groups	27
6.1.	Complex and Real Algebraic Groups	27
6.2.	Algebraic Subgroups and Subalgebras	28
6.3.	Semisimple and Reductive Algebraic Groups	29
6.4.	Polar Decomposition	31
6.5.	Chevalley Decomposition	32
§7.	Complexification and Real Forms	33
7.1.	Complexification and Real Forms of Lie Algebras	33
7.2.	Complexification and Real Forms of Lie Groups	35
7.3.	Universal Complexification of a Lie Group	36
§8.	Splittings of Lie Groups and Lie Algebras	38
8.1.	Malcev Splittable Lie Groups and Lie Algebras	38
8.2.	Definition of Splittings of Lie Groups and Lie Algebras	39
8.3.	Theorem on the Existence and Uniqueness of Splittings	40
§9.	Cartan Subalgebras and Subgroups. Weights and Roots	41
9.1.	Representations of Nilpotent Lie Algebras	41
9.2.	Weights and Roots with Respect to a Nilpotent Subalgebra	43
9.3.	Cartan Subalgebras	43
9.4.	Cartan Subalgebras and Root Decompositions of Semisimple Lie Algebras	45
9.5.	Cartan Subgroups	46
	Chapter 2. Solvable Lie Groups and Lie Algebras	48
§1.	Examples	48
§2.	Triangular Lie Groups and Lie Algebras	49
§3.	Topology of Solvable Lie Groups and Their Subgroups	50
3.1.	Canonical Coordinates	50
3.2.	Topology of Solvable Lie Groups	51
3.3.	Aspherical Lie Groups	52
3.4.	Topology of Subgroups of Solvable Lie Groups	52
§4.	Nilpotent Lie Groups and Lie Algebras	53
4.1.	Definitions and Examples	53
4.2.	Malcev Coordinates	55
4.3.	Cohomology and Outer Automorphisms	56
§5.	Nilpotent Radicals in Lie Algebras and Lie Groups	58
5.1.	Nilradical	58
5.2.	Nilpotent Radical	58
5.3.	Unipotent Radical	59

§6. Some Classes of Solvable Lie Groups and Lie Algebras	59
6.1. Characteristically Nilpotent Lie Algebras	59
6.2. Filiform Lie Algebras	61
6.3. Nilpotent Lie Algebras of Class 2	62
6.4. Exponential Lie Groups and Lie Algebras	63
6.5. Lie Algebras and Lie Groups of Type (I)	65
§7. Linearizability Criterion for Solvable Lie Groups	66
 Chapter 3. Complex Semisimple Lie Groups and Lie Algebras	67
§1. Root Systems	67
1.1. Abstract Root Systems	68
1.2. Root Systems of Reductive Groups	70
1.3. Root Decompositions and Root Systems for Classical Complex Lie Algebras	72
1.4. Weyl Chambers and Simple Roots	73
1.5. Borel Subgroups and Subalgebras	76
1.6. The Weyl Group	77
1.7. The Dynkin Diagram and the Cartan Matrix	79
1.8. Classification of Admissible Systems of Vectors and Root Systems	82
1.9. Root and Weight Lattices	83
1.10. Chevalley Basis	85
§2. Classification of Complex Semisimple Lie Groups and Their Linear Representations	86
2.1. Uniqueness Theorems for Lie Algebras	86
2.2. Uniqueness Theorem for Linear Representations	88
2.3. Existence Theorems	90
2.4. Global Structure of Connected Semisimple Lie Groups . . .	91
2.5. Classification of Connected Semisimple Lie Groups	92
2.6. Linear Representations of Connected Reductive Algebraic Groups	94
2.7. Dual Representations and Bilinear Invariants	96
2.8. The Kernel and the Image of a Locally Faithful Linear Representation	99
2.9. The Casimir Operator and Dynkin Index	100
2.10. Spinor Group and Spinor Representation	102
§3. Automorphisms and Gradings	104
3.1. Description of the Group of Automorphisms	104
3.2. Quasitori of Automorphisms and Gradings	105
3.3. Homogeneous Semisimple and Nilpotent Elements	106
3.4. Fixed Points of Automorphisms	107
3.5. One-dimensional Tori of Automorphisms and $\mathbb{Z}$ -gradings .	108
3.6. Canonical Form of an Inner Semisimple Automorphism . .	110

3.7.	Inner Automorphisms of Finite Order and $\mathbb{Z}_m$ -gradings of Inner Type	112
3.8.	Quasitorus Associated with a Component of the Group of Automorphisms	115
3.9.	Generalized Root Decomposition	117
3.10.	Canonical Form of an Outer Semisimple Automorphism	119
3.11.	Outer Automorphisms of Finite Order and $\mathbb{Z}_m$ -gradings of Outer Type	121
3.12.	Jordan Gradings of Classical Lie Algebras	123
3.13.	Jordan Gradings of Exceptional Lie Algebras	127
Chapter 4. Real Semisimple Lie Groups and Lie Algebras		127
§1.	Classification of Real Semisimple Lie Algebras	127
1.1.	Real Forms of Classical Lie Groups and Lie Algebras	128
1.2.	Compact Real Form	131
1.3.	Real Forms and Involutory Automorphisms	133
1.4.	Involutory Automorphisms of Complex Simple Algebras	134
1.5.	Classification of Real Simple Lie Algebras	135
§2.	Compact Lie Groups and Complex Reductive Groups	137
2.1.	Some Properties of Linear Representations of Compact Lie Groups	137
2.2.	Self-adjointness of Reductive Algebraic Groups	138
2.3.	Algebraicity of a Compact Lie Group	139
2.4.	Some Properties of Extensions of Compact Lie Groups	139
2.5.	Correspondence Between Real Compact and Complex Reductive Lie Groups	141
2.6.	Maximal Tori in Compact Lie Groups	142
§3.	Cartan Decomposition	143
3.1.	Cartan Decomposition of a Semisimple Lie Algebra	143
3.2.	Cartan Decomposition of a Semisimple Lie Group	145
3.3.	Conjugacy of Maximal Compact Subgroups of Semisimple Lie Groups	147
3.4.	Topological Structure of Lie Groups	148
3.5.	Classification of Connected Semisimple Lie Groups	149
3.6.	Linearizer of a Semisimple Lie Group	151
§4.	Real Root Decomposition	153
4.1.	Maximal $\mathbb{R}$ -Diagonalizable Subalgebras	153
4.2.	Real Root Systems	154
4.3.	Satake Diagrams	156
4.4.	Split Real Semisimple Lie Algebras	157
4.5.	Iwasawa Decomposition	158
4.6.	Maximal Connected Triangular Subgroups	160
4.7.	Cartan Subalgebras of a Real Semisimple Lie Algebra	162
§5.	Exponential Mapping for Semisimple Lie Groups	163

5.1. Image of the Exponential Mapping	163
5.2. Index of an Element of a Lie Group	164
5.3. Indices of Simple Lie Groups	165
Chapter 5. Models of Exceptional Lie Algebras	167
§1. Models Associated with the Cayley Algebra	167
1.1. Cayley Algebra	167
1.2. The Algebra G_2	169
1.3. Exceptional Jordan Algebra	172
1.4. The Algebra F_4	173
1.5. The Algebra E_6	175
1.6. The Algebra E_7	176
1.7. Unified Construction of Exceptional Lie Algebras	177
§2. Models Associated with Gradings	178
Chapter 6. Subgroups and Subalgebras of Semisimple Lie Groups and Lie Algebras	182
§1. Regular Subalgebras and Subgroups	182
1.1. Regular Subalgebras of Complex Semisimple Lie Algebras	182
1.2. Description of Semisimple and Reductive Regular Subalgebras	184
1.3. Parabolic Subalgebras and Subgroups	187
1.4. Examples of Parabolic Subgroups and Flag Manifolds	188
1.5. Parabolic Subalgebras of Real Semisimple Lie Algebras	190
1.6. Nonsemisimple Maximal Subalgebras	192
§2. Three-dimensional Simple Subalgebras and Nilpotent Elements	193
2.1. $\mathfrak{sl}_2$ -triples	193
2.2. Three-dimensional Simple Subalgebras of Classical Simple Lie Algebras	195
2.3. Principal and Semiprincipal Three-dimensional Simple Subalgebras	197
2.4. Minimal Ambient Regular Subalgebras	199
2.5. Minimal Ambient Complete Regular Subalgebras	200
§3. Semisimple Subalgebras and Subgroups	203
3.1. Semisimple Subgroups of Complex Classical Groups	203
3.2. Maximal Connected Subgroups of Complex Classical Groups	205
3.3. Semisimple Subalgebras of Exceptional Complex Lie Algebras	206
3.4. Semisimple Subalgebras of Real Semisimple Lie Algebras	207
Chapter 7. On the Classification of Arbitrary Lie Groups and Lie Algebras of a Given Dimension	209
§1. Classification of Lie Groups and Lie Algebras of Small Dimension	209
1.1. Lie Algebras of Small Dimension	209
1.2. Connected Lie Groups of Dimension ≤ 3	212

§2. The Space of Lie Algebras. Deformations and Contractions . . .	213
2.1. The Space of Lie Algebras	213
2.2. Orbits of the Action of the Group $GL_n(k)$ on $\mathcal{L}_n(k)$	214
2.3. Deformations of Lie Algebras	216
2.4. Rigid Lie Algebras	219
2.5. Contractions of Lie Algebras	220
2.6. Spaces $\mathcal{L}_n(k)$ for Small n	222
