## Invited Lectures

|                                                                  |    |
|------------------------------------------------------------------|----|
| Stability of Discrete Sampled Systems .....                      | 1  |
| <i>N. Halbwachs, J.-F. Héry, J.-C. Laleuf, X. Nicollin</i>       |    |
| Issues in the Refinement of Distributed Programs .....           | 12 |
| <i>Yoram Moses</i>                                               |    |
| Challenges in the Verification of Electronic Control Units ..... | 18 |
| <i>Werner Damm</i>                                               |    |

## Model Checking

|                                                                                                               |    |
|---------------------------------------------------------------------------------------------------------------|----|
| Scaling up Uppaal Automatic Verification of Real-Time Systems Using<br>Compositionality and Abstraction ..... | 19 |
| <i>Henrik Ejersbo Jensen, Kim Guldstrand Larsen, Arne Skou</i>                                                |    |
| Decidable Model Checking of Probabilistic Hybrid Automata .....                                               | 31 |
| <i>Jeremy Sproston</i>                                                                                        |    |

## Fault Tolerance

|                                                                      |    |
|----------------------------------------------------------------------|----|
| Invariant-Based Synthesis of Fault-Tolerant Systems .....            | 46 |
| <i>K. Lano, David Clark, K. Androutsopoulos, P. Kan</i>              |    |
| Modeling Faults of Distributed, Reactive Systems .....               | 58 |
| <i>Max Breitling</i>                                                 |    |
| Threshold and Bounded-Delay Voting in Critical Control Systems ..... | 70 |
| <i>Paul Caspi, Rym Salem</i>                                         |    |
| Automating the Addition of Fault-Tolerance .....                     | 82 |
| <i>Sandeep S. Kulkarni, Anish Arora</i>                              |    |
| Reliability Modelling of Time-Critical Distributed Systems .....     | 94 |
| <i>Hans Hansson, Christer Norström, Sasikumar Punnekkat</i>          |    |

## Scheduling

|                                                                          |     |
|--------------------------------------------------------------------------|-----|
| A Methodology for the Construction of Scheduled Systems .....            | 106 |
| <i>K. Altisen, G. Gößler, J. Sifakis</i>                                 |     |
| A Dual Interpretation of “Standard Constraints” in Parametric Scheduling | 121 |
| <i>K. Subramani, Ashok Agrawala</i>                                      |     |

## Validation

|                                                                                                           |     |
|-----------------------------------------------------------------------------------------------------------|-----|
| Co-simulation of Hybrid Systems: Signal-Simulink .....                                                    | 134 |
| <i>Stéphane Tudoret, Simin Nadjm-Tehrani, Albert Benveniste,<br/>Jan-Erik Strömberg</i>                   |     |
| A System for Object Code Validation .....                                                                 | 152 |
| <i>A. K. Bhattacharjee, Gopa Sen, S. D. Dhodapkar, K. Karunakar,<br/>Basant Rajan, R. K. Shyamasundar</i> |     |

## Refinement

|                                                              |     |
|--------------------------------------------------------------|-----|
| Real-Time Program Refinement Using Auxiliary Variables ..... | 170 |
| <i>Ian Hayes</i>                                             |     |
| On Refinement and Temporal Annotations .....                 | 185 |
| <i>Ron van der Meyden, Yoram Moses</i>                       |     |
| Generalizing Action Systems to Hybrid Systems .....          | 202 |
| <i>Ralph-Johan Back, Luigia Petre, Ivan Porres</i>           |     |

## Verification

|                                                          |     |
|----------------------------------------------------------|-----|
| Compositional Verification of Synchronous Networks ..... | 214 |
| <i>Leszek Holenderski</i>                                |     |
| Modelling Coordinated Atomic Actions in Timed CSP .....  | 228 |
| <i>Simeon Veloudis, Nimal Nissanke</i>                   |     |

## Logic and Automata

|                                                                                                         |     |
|---------------------------------------------------------------------------------------------------------|-----|
| A Logical Characterisation of Event Recording Automata .....                                            | 240 |
| <i>Deepak D'Souza</i>                                                                                   |     |
| Using Cylindrical Algebraic Decomposition for the Analysis of Slope<br>Parametric Hybrid Automata ..... | 252 |
| <i>Michaël Adlaide and Olivier Roux</i>                                                                 |     |
| Probabilistic Neighbourhood Logic .....                                                                 | 264 |
| <i>Dimitar P. Guelev</i>                                                                                |     |
| An On-the-Fly Tableau Construction for a Real-Time Temporal Logic ....                                  | 276 |
| <i>Marc Geilen, Dennis Dams</i>                                                                         |     |
| Verifying Universal Properties of Parameterized Networks .....                                          | 291 |
| <i>Kai Baukus, Yassine Lakhnech, Karsten Stahl</i>                                                      |     |
| Author Index .....                                                                                      | 305 |
