

Contents

1	The General Scenario	1
1.1	Cosmic Rays	1
1.1.1	General Properties of Cosmic Rays	2
1.1.2	Cosmic Rays in the Solar System	4
1.2	The Unperturbed System	5
1.3	Particle Diffusion and the TGK Formulation	8
1.3.1	Mean Square Displacements and Diffusion Coefficients	8
1.3.2	The TGK Formulation	9
1.4	The Physics of Parallel Scattering	11
1.4.1	The Two-Dimensional Fokker-Planck Equation	11
1.4.2	The Diffusion Equation	12
1.4.3	Solution of the Diffusion Equation	15
1.5	The Physics of Perpendicular Scattering	16
1.6	The Diffusion Tensor and Momentum Diffusion	20
1.6.1	Fokker-Planck vs. Diffusion Coefficients	22
1.6.2	Cosmic Ray Momentum Diffusion Due to Electric Fields	23
1.7	Cosmic Ray Mean Free Paths Deduced from Observations	23
1.7.1	Observed Mean Free Paths in the Heliosphere	24
1.7.2	Transport in the Interstellar Medium	26
2	On Astrophysical Turbulence	29
2.1	General Forms of the Magnetic Correlation Tensor	29
2.1.1	The Isotropic Correlation Tensor	30
2.1.2	Axisymmetric Turbulence and Vanishing Magnetic Helicity	32
2.1.3	The Correlation Length	36
2.2	The Magnetostatic Slab Model	36
2.2.1	The Slab Correlation Function	37
2.2.2	The Slab Correlation Length	38

2.3	The Magnetostatic 2D Model	40
2.3.1	The 2D Correlation Function	40
2.3.2	The Correlation Length for Pure 2D Turbulence	43
2.3.3	The Vector Potential of Pure 2D Turbulence.....	43
2.4	Linear and Nonlinear Theories for Stochastic Field Line Wandering ..	44
2.4.1	The Initial Free-Streaming Regime	45
2.4.2	Field Line Random Walk for Slab Turbulence.....	46
2.4.3	Quasilinear Theory of Field Line Random Walk	47
2.4.4	The Nonlinear Approach for Field Line Random Walk	47
2.4.5	The Diffusion Limit of Matthaeus et al	50
2.5	Dynamical Turbulence and Plasma Wave Propagation Effects.....	52
2.5.1	Damping and Random Sweeping Models.....	52
2.5.2	Plasma Wave Turbulence	53
2.5.3	The Nonlinear Anisotropic Dynamical Turbulence Model	54
3	The Quasilinear Theory	57
3.1	The Quasilinear Approximation	57
3.2	General Forms of Quasilinear Fokker–Planck Coefficients	59
3.2.1	General Form of the Pitch-angle Fokker–Planck Coefficient	59
3.2.2	General Form of the Fokker–Planck Coefficient of Perpendicular Diffusion.....	62
3.3	Standard QLT (Magnetostatic Slab Turbulence)	63
3.3.1	The Pitch-angle Fokker–Planck Coefficient	63
3.3.2	The Parallel Mean Free Path.....	64
3.3.3	The Perpendicular Mean Free Path.....	65
3.4	Quasilinear Theory for Magnetostatic 2D Turbulence.....	66
3.4.1	Pitch-angle Diffusion in Pure 2D Turbulence by Using the Traditional Approach.....	66
3.4.2	Pitch-angle Diffusion in Pure 2D Turbulence by Using a Vector-potential Approach	67
3.4.3	Perpendicular Diffusion in Pure 2D Turbulence	69
3.5	Quasilinear Transport in the Slab/2D Composite Model	71
3.6	Test-particle Simulations	73
3.6.1	The Simulations of Giacalone and Jokipii	74
3.6.2	The Simulations of Qin	74
3.6.3	Confirmation of QLT for Parallel Diffusion in the Slab Model	74
3.7	The Three Problems of QLT	75
3.7.1	The 90°-Scattering Problem	75
3.7.2	The Problem of Perpendicular Diffusion.....	78
3.7.3	The Geometry Problem	79

4	The Nonlinear Guiding Center Theory	83
4.1	The Nonlinear Closure Approximation	83
4.1.1	The Results of the NCA	84
4.1.2	Test of the NCA by Comparing it with Simulations	87
4.2	The Bieber and Matthaeus Model	87
4.2.1	The Basic Formulas of the BAM Theory	88
4.2.2	Results of the BAM Theory for Slab Geometry	90
4.2.3	The BAM Theory for Slab/2D Composite Geometry	91
4.3	The Nonlinear Guiding Center Theory	91
4.4	Analytical Solutions of the NLGC Theory for Magnetostatic Slab Turbulence	93
4.5	NLGC Theory for Slab/2D Composite Geometry	95
5	The Weakly Nonlinear Theory	99
5.1	The Basic Idea of a Nonlinear Transport Theory	99
5.2	The Weakly Nonlinear Resonance Function	101
5.3	The Nonlinear Fokker–Planck Coefficients for Two-component Turbulence	104
5.3.1	The Fokker–Planck Coefficient $D_{\mu\mu}^{\text{slab}}$	104
5.3.2	The Fokker–Planck Coefficient $D_{\mu\mu}^{2D}$	105
5.3.3	The Fokker–Planck Coefficient $D_{\mu\mu}^{\text{slab}}$	106
5.3.4	The Fokker–Planck Coefficient $D_{\perp}^{2D}$	106
5.4	Results of WNL for the Parallel and the Perpendicular Mean Free Path	108
5.4.1	The Nonlinear Fokker–Planck Coefficients $D_{\mu\mu}$ and $D_{\perp}$	108
5.4.2	$\lambda_{\parallel}$, $\lambda_{\perp}$, and $\lambda_{\perp}/\lambda_{\parallel}$ for Two-component Turbulence	109
5.4.3	The Parallel Mean Free Path as a Function of $\delta B_{\text{slab}}^2/\delta B^2$	112
5.4.4	Equal Bendover Scales in the Composite Model	112
5.5	Is the Weakly Nonlinear Theory Reasonable?	114
6	The Second-order QLT	115
6.1	Nonlinear Pitch-angle Diffusion in Pure Slab Turbulence	115
6.1.1	The Quasilinear Velocity Correlation Function	116
6.1.2	The Time-dependent Pitch-angle Fokker–Planck Coefficient	117
6.1.3	The Ensemble Averaged Parallel Position	119
6.1.4	The Quasilinear Mean Square Displacement	119
6.2	The Resonance Function of SOQLT	121
6.2.1	The 90°-Approximation	121
6.2.2	The 90°-Late-time Approximation	122
6.3	Comparison with Previous Theories	122
6.3.1	The Nonlinear Perturbation Theory	123
6.3.2	The Partially Averaged Field Theory	123

6.3.3	The Heuristic Ansatz by Völk	124
6.3.4	The Strong Turbulence, Weak Coupling Theory	125
6.4	Analytical Results of SOQLT	125
6.4.1	Different Forms of the Wave Spectrum	126
6.4.2	Analytical Results for 90°-Scattering	127
6.5	Numerical Results for Fokker–Planck Coefficients and Mean Free Paths	128
6.5.1	Numerical Results for $D_{\mu\mu}^{(2)}$	129
6.5.2	Numerical Results for $\lambda_{\parallel}^{(2)}$	129
6.5.3	Steep Wave Spectra	132
6.6	Aspects of SOQLT	132
7	The Extended Nonlinear Guiding Center Theory	135
7.1	The Slab Problem of Perpendicular Transport	135
7.2	Integration of the Equations of Motion	136
7.3	Application of Quasilinear Theory	137
7.3.1	Time-dependent Perpendicular Transport	138
7.3.2	Finite Box-size Effects	139
7.4	The Nonlinear Guiding Center Model	141
7.4.1	Analytical and Numerical Results of the Nonlinear Model	142
7.4.2	Running Diffusion Coefficient and Velocity Correlation Function	144
7.5	The Extended Nonlinear Guiding Center Theory	145
7.5.1	Analytic Forms of the Perpendicular Mean Free Path	147
7.6	Comparison with Test-particle Simulations	147
7.6.1	Run 1: Pure Slab Geometry	148
7.6.2	Run 2: Strong Slab Geometry	148
7.6.3	Run 3: Strong 2D Geometry	149
7.7	Compound Subdiffusion for Pure Slab Turbulence	150
7.8	Aspects of ENLGC Theory	152
8	Applications	155
8.1	Particle Transport in the Heliosphere	155
8.1.1	The Quasilinear Parallel Mean Free Path	156
8.1.2	The Nonlinear Perpendicular Mean Free Path	160
8.1.3	Numerical Results Obtained by Using the NADT Model	162
8.1.4	Can We Indeed Reproduce Heliospheric Observations?	167
8.2	Particle Acceleration at Perpendicular Shock Waves	168
8.2.1	Interplanetary Shock Waves	169
8.2.2	The Perpendicular Diffusion Coefficient	171
8.2.3	The Shock Acceleration Time Scale	172
8.2.4	Influence of Nonlinear Diffusion on Shock Acceleration	174

8.3	Primary-to-Secondary Abundance Ratio of Galactic Cosmic Rays	175
8.3.1	Rigidity Dependence of the Weakly Nonlinear Parallel Mean Free Path	176
8.3.2	Importance of Nonlinear Effects	177
8.3.3	Validity of the WNLТ Results	177
9	Summary and Outlook	179
9.1	Summary	179
9.1.1	Turbulence and Cosmic Rays	179
9.1.2	Specific Conclusions	180
9.2	Outlook	183
9.2.1	Future Test-particle Simulations	184
9.2.2	Future Theoretical Work	184
9.2.3	Future Observational Work	185
