

Table of Contents

1. Introduction _____ 9

1.1. Motivation _____ 9

1.2. Structure _____ 12

2. State of Knowledge _____ 13

2.1. Derivation of the Time-Harmonic Wave Equation _____ 13

2.2. Control of Time-Harmonic Waves _____ 16

2.2.1. Frequency Domain Multichannel Control _____ 16

2.2.2. Active Noise Control as an Inverse Problem _____ 18

2.2.3. Minimal Sound Power of two Isotropic Sources _____ 20

2.2.4. Transform Domain Adaptive Filtering _____ 22

2.3. Literature Review of Active Noise Control for Infinite Domains _____ 25

2.3.1. Angular Control – Experimental Results _____ 25

2.3.2. Angular Control – Numerical Results _____ 27

2.3.3. Global Control – Experimental Results _____ 28

2.3.4. Global Control – Numerical Results _____ 29

2.4. Scientific Contribution _____ 32

3. Methods _____ 33

3.1. Literature Review of Boundary Element Simulations of Active Noise Control _____ 33

3.2. Simulation of Active Noise Control using Speakers _____ 36

3.2.1. Direct Boundary Element Ansatz _____ 36

3.2.2. Validation of Radiation Simulation _____ 38

3.2.3. Validation of the Adequacy of One-sided Fluid Structure Interaction Modelling _____ 42

3.3. Technical Implementation of an Active Global Control System _____ 44

3.3.1. Hardware _____ 44

3.3.2. Frequency Response Function Identification Algorithm _____ 45

3.3.3. Frequency Domain Control Algorithm _____ 47

4. Results _____ 50

4.1. Field Measurement of the Time-Harmonic Noise Emission of a Ferry at Berth _____ 50

4.2. Performance Simulation of Active Noise Control applied to a Ferry Noise Source _____ 50

4.3. Boundary Element Simulations of a Phase-locked Control Strategy _____ 59

4.4. Laboratory Experiments Using the Phase-locked Control Strategy _____ 64

5. Conclusions _____ 69

Table of Figures	71
Bibliography	73
Addendum	82
A1. Non-uniqueness problems in MIMO Active Noise Control	82
A2. Numerical Benchmark of Scattering from a Sound-hard Sphere	83
A3. Phase Measurements	84
A4. Actuator Model Data and Code	85
