|                                                                                                                                                |     |
|------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| The Success Story of the Transfer and Development of Methods<br>from Geophysics to Helioseismology<br><i>Douglas Gough</i>                     | 1   |
| Filtering in Inversion for Solar Internal Structure<br><i>Sarbani Basu, J.Christensen-Dalsgaard, F. Pérez Hernández and<br/>M. J. Thompson</i> | 32  |
| Averaging Kernels, Error Correlation Functions and Linear Methods<br>in Helioseismology<br><i>Rachel Howe and Michael J. Thompson</i>          | 40  |
| Inversion for the Velocity Field in the Solar Interior<br><i>Jesper Schou</i>                                                                  | 48  |
| On the Choice of Trade-off Parameter in Helioseismic SOLA Inversion<br><i>A. A. Stepanov and J. Christensen-Dalsgaard</i>                      | 54  |
| Prospects for Binary Star Research Using Disentangling<br><i>Pierre Maxted</i>                                                                 | 60  |
| Estimating Bidirectional Transport Parameters for the Blood-<br>Retina Barrier - A Feasibility Study <i>Peter Dalgaard</i>                     | 64  |
| Determination and variability of depth profiles from XPS backgrounds<br><i>Kamil L. Aminov, J.S. Jørgensen, and J.B. Pedersen</i>              | 73  |
| Uncertainties in Seismic Inverse Calculations<br><i>John A. Scales</i>                                                                         | 79  |
| Constrained Waveform Inversion of Seismic Well Data<br><i>Marwan Charara, C. Barnes, and A. Tarantola</i>                                      | 98  |
| Geological Information and the Inversion of Seismic Data<br><i>Christophe Barnes, M. Charara, and A. Tarantola</i>                             | 113 |
| A Study of Model Covariances in Amplitude Seismic Inversion<br><i>Wences Gouveia</i>                                                           | 122 |
| Resolution and Error Propagation Analysis for Tomographic Data<br>with Correlated Errors<br><i>Lars Nielsen and Bo Holm Jacobsen</i>           | 131 |

|                                                                                                                                                     |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Estimating Background Velocity from Reflection Seismic Data<br>- A Feasibility Study<br><i>Lisbeth Engell-Sørensen, T.-J. Moser, and J. Pajchel</i> | 139 |
| Phase Migration: An Approach to Inversion<br>of Wide-Angle Seismic Data<br><i>Konstantin S. Osypov, Zhengsheng Yao, and R.G. Roberts</i>            | 151 |
| Location of Seismic Events - A Quest for Accuracy<br><i>Wojciech Dębski</i>                                                                         | 161 |
| Inverse Estimation of Parameters in Petroleum Reaction Networks<br><i>Søren B. Nielsen, T. Barth, and L.C. Dahl</i>                                 | 167 |
| Inversion of a Simple Petroleum Expulsion Model<br><i>Jens Martin Hvid and Søren B. Nielsen</i>                                                     | 178 |
| Inversion of Transient Hydraulic Head Variation<br>Caused by a controlled Point Source<br><i>Dorte Dam, N.B. Christensen, and K.I. Sørensen</i>     | 186 |
| Deconvolution of Geophysical Multioffset Resistivity Profile Data<br><i>Ingelise Møller, N.B. Christensen, and B.H. Jacobsen</i>                    | 197 |
| Imaging of Transient Electromagnetic Soundings<br>Using a Scaling Approximate Frechet Derivative<br><i>Niels B. Christensen</i>                     | 205 |
| A Case of Processing Design Using Inversion: Simple Gating<br>versus Iterative Reweighted Least Squares Inversion<br><i>M.S. Munkholm</i>           | 215 |
| Inverting Magnetotelluric Data Using Genetic Algorithms<br>and Simulated Annealing<br><i>Oliver Bäumer</i>                                          | 223 |
| Ionospheric Tomography<br><i>Manabu Kunitake</i>                                                                                                    | 231 |
| Application of Inversion to Global Ocean Tide Mapping<br><i>Ole B. Andersen</i>                                                                     | 239 |
| Inversion of STEP-Observation Equation Using<br>Barnach's Fixed-Point Principle<br><i>Wolfgang Keller</i>                                           | 247 |

|                                                                                                                  |     |
|------------------------------------------------------------------------------------------------------------------|-----|
| Improving the Planar Isotropic Covariance Models<br><i>Gabriel Strykowski</i>                                    | 254 |
| Optimal Linear Estimation Theory<br>for Continuous Fields of Observations<br><i>F. Sacerdote and F. Sansò</i>    | 262 |
| Least Squares Adjustment of High Degree Spherical Harmonics<br><i>Wolf-Dieter Schuh</i>                          | 276 |
| Piecewise Polynomial Solutions to Linear Inverse Problems<br><i>Per Christian Hansen and Klaus Mosegaard</i>     | 284 |
| Regularization Methods for Almost Rank-Deficient Nonlinear Problems<br><i>Jerry Eriksson and Per-Åke Wedin</i>   | 295 |
| Constant Thermodynamic Speed Simulated Annealing<br><i>Bjarne Andresen and J.M. Gordon</i>                       | 303 |
| Mean Field Reconstruction with Snaky Edge Hints<br><i>Peter Alshede Philipsen, L.K. Hansen, and P. Toft</i>      | 312 |
| An Object-Oriented Toolbox for Studying Optimization Problems<br><i>H. Lydia Deng, W. Gouveia, and J. Scales</i> | 320 |
| Maximum Mixing Method<br><i>Jens Hjorth</i>                                                                      | 331 |
| Subject Index                                                                                                    | 337 |
