ANHA Series Preface	vii
Preface	ix
1 Introduction	1
1.1 What this Book is About	1
1.2 Different Meanings of Equality	4
1.2.1 Defining Equalities	4
1.2.2 Equality in the Sense of Zero Mean-Squared Error	5
1.2.3 Big-O Notation	6
1.2.4 A Philosophical View of Equality and Inequality	7
1.3 Other Useful Shortcuts	8
1.3.1 Simplifying Notation	8
1.3.2 Nice, Well-Behaved, Non-Pathological Functions	9
1.4 Modern Mathematical Notation and Terminology	10
1.4.1 What is Modern Mathematics?	10
1.4.2 Stating Mathematical Results	11
1.4.3 Sets and Mappings	11
1.4.4 Transformation Groups	17
1.4.5 Understanding Commutative Diagrams	17
1.5 Transport Phenomena and Probability Flow	19
1.5.1 Continuum Mechanics	20
1.5.2 Heat Flow and Entropy	25
1.6 Organization of this Book	27
1.7 Chapter Summary	28
1.8 Exercises	28
References	29
2 Gaussian Distributions and the Heat Equation	31
2.1 The Gaussian Distribution on the Real Line	31
2.1.1 Defining Parameters	31
2.1.2 The Maximum Entropy Property	34
2.1.3 The Convolution of Gaussians	36
2.1.4 The Fourier Transform of the Gaussian Distribution	37
2.1.5 Diffusion Equations	38
2.1.6 Stirling's Formula	39

2.2	The Multivariate Gaussian Distribution	40
2.2.1	Conditional and Marginal Densities	40
2.2.2	Multi-Dimensional Integrals Involving Gaussians	42
2.3	The Volume of Spheres and Balls in $\mathbb{R}^n$	43
2.4	Clipped Gaussian Distributions	45
2.4.1	One-Dimensional Clipped Gaussian Distributions	45
2.4.2	Multi-Dimensional Clipped Gaussian Distributions	46
2.5	Folded, or Wrapped, Gaussians	47
2.6	The Heat Equation	48
2.6.1	The One-Dimensional Case	48
2.6.2	The Multi-Dimensional Case	50
2.6.3	The Heat Equation on the Unit Circle	51
2.7	Gaussians and Multi-Dimensional Diffusions	51
2.7.1	The Constant Diffusion Case	51
2.7.2	The Time-Varying Case	52
2.8	Symmetry Analysis of Evolution Equations	53
2.8.1	Symmetries in Parameters	54
2.8.2	Infinitesimal Symmetry Operators of the Heat Equation	54
2.8.3	Non-Linear Transformations of Coordinates	57
2.9	Chapter Summary	58
2.10	Exercises	58
	References	60
3	Probability and Information Theory	63
3.1	Probability Theory in Euclidean Space	64
3.1.1	Basic Definitions and Properties of Probability Density Functions	64
3.1.2	Change of Variables	65
3.1.3	Marginalization, Conditioning, and Convolution	65
3.1.4	Mean and Covariance	66
3.1.5	Parametric Distributions	67
3.2	Conditional Expectation	68
3.2.1	Jensen's Inequality and Conditional Expectation	71
3.2.2	Convolution and Conditional Expectation	72
3.3	Information Theory	73
3.3.1	Entropy of Conditional and Marginal Density Functions	74
3.3.2	Entropy and Gaussian Distributions	75
3.3.3	Mutual Information	76
3.3.4	Information-Theoretic Measures of Divergence	76
3.3.5	Fisher Information	77
3.3.6	Information and Convolution	78
3.3.7	Shift and Scaling Properties	80
3.4	Parameter Estimation	81
3.4.1	Unbiased Estimators	82
3.4.2	The Cramér-Rao Bound	82
3.4.3	Demonstration with Gaussian Distributions	84
3.4.4	The de Bruijn Identity	84
3.4.5	The Entropy Power Inequality	85
3.4.6	Entropy of a Weighted Sum of Disjoint PDFs	87
3.4.7	Change of Coordinates	88
3.4.8	Computation of Entropy via Discretization	89

3.5	The Classical Central Limit Theorem	91
3.5.1	The Central Limit Theorem (Fourier Version)	91
3.5.2	The Central Limit Theorem (RMSD Error Version)	92
3.5.3	The Central Limit Theorem (Information-Theoretic Version)	94
3.5.4	Limitations of the Central Limit Theorem	94
3.6	An Alternative Measure of Dispersion	95
3.7	Chapter Summary	95
3.8	Exercises	96
	References	97
4	Stochastic Differential Equations	101
4.1	Motivating Examples	101
4.1.1	The Discrete Random Walker	102
4.1.2	Continuous-Time Brownian Motion in Continuous Space	103
4.2	Stationary and Non-Stationary Random Processes	105
4.2.1	Weak and Strong Stationarity	105
4.2.2	Non-Stationary Processes	106
4.3	Gaussian and Markov Processes	106
4.4	Wiener Processes and Stochastic Differential Equations	108
4.4.1	An Informal Introduction	108
4.4.2	Abstracted Definitions	111
4.5	The Itô Stochastic Calculus	112
4.5.1	Itô Stochastic Differential Equations in $\mathbb{R}^d$	114
4.5.2	Numerical Approximations	115
4.5.3	Mathematical Properties of the Itô Integral	116
4.5.4	Evaluating Expectations is Convenient for Itô Equations	118
4.5.5	Itô's Rule	119
4.5.6	The Fokker–Planck Equation (Itô Version)	120
4.6	The Stratonovich Stochastic Calculus	121
4.7	Multi-Dimensional Ornstein–Uhlenbeck Processes	123
4.7.1	Steady-State Conditions	124
4.7.2	Steady-State Solution	126
4.7.3	Detailed Balance and the Onsager Relations	128
4.8	SDEs and Fokker–Planck Equations Under Coordinate Changes	130
4.8.1	Brownian Motion in the Plane	130
4.8.2	General Conversion Rules	134
4.8.3	Coordinate Changes and Fokker–Planck Equations	134
4.9	Chapter Summary	136
4.10	Exercises	136
	References	138
5	Geometry of Curves and Surfaces	141
5.1	An Introduction to Geometry Through Robotic Manipulator Kinematics	142
5.1.1	Forward (or Direct) Kinematics	142
5.1.2	Reverse (or Inverse) Kinematics	144
5.2	A Case Study in Medical Imaging	147
5.2.1	A Parametric Approach	148
5.2.2	An Implicit Approach	151
5.3	Differential Geometry of Curves	154
5.3.1	Local Theory of Curves	155

5.3.2	Global Theory of Curves	157
5.4	Differential Geometry of Surfaces in $\mathbb{R}^3$	159
5.4.1	The First and Second Fundamental Forms	161
5.4.2	Curvature	163
5.4.3	The Sphere	166
5.4.4	The Ellipsoid of Revolution	167
5.4.5	The Torus	169
5.4.6	The Gauss–Bonnet Theorem and Related Inequalities	170
5.5	Tubes	171
5.5.1	Offset Curves in $\mathbb{R}^2$	171
5.5.2	Parallel Fibers, Ribbons, and Tubes of Curves in $\mathbb{R}^3$	172
5.5.3	Tubes of Surfaces in $\mathbb{R}^3$	175
5.6	The Euler Characteristic: From One Dimension to N Dimensions	176
5.6.1	The Euler Characteristic of Zero-, One-, and Three-Dimensional Bodies	176
5.6.2	Relationship Between the Euler Characteristic of a Body and Its Boundary	178
5.6.3	The Euler Characteristic of Cartesian Products of Objects	179
5.7	Implicit Surfaces, Level Set Methods, and Curvature Flows	179
5.7.1	Implicit Surfaces	179
5.7.2	Integration on Implicitly Defined Surfaces and Curves in $\mathbb{R}^3$	181
5.7.3	Integral Theorems for Implicit Surfaces	184
5.7.4	Level Sets and Curvature Flows	184
5.8	Chapter Summary	186
5.9	Exercises	186
	References	190
6	Differential Forms	193
6.1	An Informal Introduction to Differential Forms on $\mathbb{R}^n$	194
6.1.1	Definitions and Properties of n -Forms and Exterior Derivatives	194
6.1.2	Exterior Derivatives of $(n - 1)$ -Forms on $\mathbb{R}^n$ for $n = 2, 3$	197
6.1.3	Products of Differential Forms	199
6.1.4	Concise Notation for Differential Forms and Exterior Derivatives	200
6.2	Permutations	201
6.2.1	Examples of Permutations and Their Products	201
6.2.2	The Sign of a Permutation	202
6.2.3	Multi-Dimensional Version of the Levi–Civita Symbol	202
6.3	The Hodge Star Operator	204
6.4	Tensor Products and Dual Vectors	206
6.5	Exterior Products	207
6.5.1	A Concrete Introduction to Exterior Products	207
6.5.2	Abstract Definition of the Exterior Product of Two Vectors	208
6.5.3	The Exterior Product of Several Vectors	209
6.5.4	Computing with Exterior Products	210
6.5.5	The Exterior Product of Two Exterior Products	210
6.5.6	The Inner Product of Two Exterior Products	211
6.5.7	The Dual of an Exterior Product	211
6.6	Invariant Description of Vector Fields	211
6.7	Push-Forwards and Pull-Backs in $\mathbb{R}^n$	213
6.7.1	General Theory	213

6.7.2	Example Calculations	214
6.8	Generalizing Integral Theorems from Vector Calculus	221
6.8.1	Integration of Differential Forms	221
6.8.2	The Inner Product of Forms	222
6.8.3	Green's Theorem for a Square Region in $\mathbb{R}^2$	223
6.8.4	Stokes' Theorem for a Cube in $\mathbb{R}^3$	223
6.8.5	The Divergence Theorem for a Cube in $\mathbb{R}^3$	224
6.8.6	Detailed Examples	224
6.8.7	Closed Forms and Diffusion Equations	226
6.9	Differential Forms and Coordinate Changes	227
6.10	Chapter Summary	228
6.11	Exercises	229
	References	232
7	Polytopes and Manifolds	233
7.1	Properties and Operations on Convex Polytopes in $\mathbb{R}^n$	234
7.1.1	Computing the Volume and Surface Area of Polyhedra	235
7.1.2	Properties of Minkowski Sums	235
7.1.3	Convolution of Bodies	237
7.2	Examples of Manifolds	238
7.3	Embedded Manifolds, Part I: Using Vector Calculus	246
7.3.1	The Inner Product of Vector Fields on Manifolds Embedded in $\mathbb{R}^n$	246
7.3.2	An Example: A Hyper-Spherical Cap	247
7.3.3	Computing Normals Extrinsically Without the Cross Product	250
7.3.4	The Divergence Theorem in Coordinates	253
7.3.5	Integration by Parts on an Embedded Manifold	254
7.3.6	Curvature	257
7.4	Covariant vs. Contravariant	258
7.4.1	Tensors	258
7.4.2	Derivatives and Differentials	259
7.5	Embedded Manifolds, Part II: Using Differential Forms	261
7.5.1	Push-Forwards and Pull-Backs (Revisited)	261
7.5.2	Expressing Pull-Backs of Forms in Coordinates	262
7.5.3	Volume Element of an Embedded Manifold	263
7.5.4	Conversion to Vector Notation	264
7.5.5	General Properties of Differential Forms on Embedded Manifolds	265
7.6	Intrinsic Description of Riemannian Manifolds	266
7.6.1	Computing Tangent Vectors and Boundary Normals in Local Coordinates	269
7.6.2	Stokes' Theorem for Manifolds	270
7.6.3	The Gauss–Bonnet–Chern Theorem	277
7.7	Fiber Bundles and Connections	278
7.7.1	Fiber Bundles	279
7.7.2	Connections	281
7.8	The Heat Equation on a Riemannian Manifold	283
7.9	Chapter Summary	283
7.10	Exercises	284
	References	286

8	Stochastic Processes on Manifolds	289
8.1	The Fokker–Planck Equation for an Itô SDE on a Manifold: A Parametric Approach	289
8.2	Itô Stochastic Differential Equations on an Embedded Manifold: An Implicit Approach	291
8.2.1	The General Itô Case	291
8.2.2	Bilinear Itô Equations that Evolve on a Quadratic Hyper-Surface in $\mathbb{R}^n$	292
8.3	Stratonovich SDEs and Fokker–Planck Equations on Manifolds	293
8.3.1	Stratonovich SDEs on Manifolds: Parametric Approach	293
8.3.2	Stratonovich SDEs on Manifolds: Implicit Approach	294
8.4	Entropy and Fokker–Planck Equations on Manifolds	295
8.5	Examples	296
8.5.1	Stochastic Motion on the Unit Circle	296
8.5.2	The Unit Sphere in $\mathbb{R}^3$: Parametric Formulation	297
8.5.3	SDEs on Spheres and Rotations: Extrinsic Formulation	299
8.5.4	The SDE and Fokker–Planck Equation for the Kinematic Cart	299
8.6	Solution Techniques	300
8.6.1	Finite Difference and Finite Elements	300
8.6.2	Non-Parametric Density Estimation	301
8.6.3	Separation of Variables: Diffusion on $SE(2)$ as a Case Study	301
8.7	Chapter Summary	308
8.8	Exercises	309
	References	309
9	Summary	313
	References	314
A	Review of Linear Algebra, Vector Calculus, and Systems Theory	315
A.1	Vectors	315
A.1.1	Vector Spaces	315
A.1.2	Linear Mappings and Isomorphisms	317
A.1.3	The Scalar Product and Vector Norm	317
A.1.4	The Gram–Schmidt Orthogonalization Process	319
A.1.5	Dual Spaces	319
A.1.6	The Vector Product in $\mathbb{R}^3$	320
A.2	Matrices	321
A.2.1	Matrix Multiplication and the Trace	322
A.2.2	The Determinant	323
A.2.3	The Inverse of a Matrix	325
A.2.4	Pseudo-Inverses and Null Spaces	326
A.2.5	Special Kinds of Matrices	327
A.2.6	Matrix Norms	328
A.2.7	Matrix Inequalities	331
A.3	Eigenvalues and Eigenvectors	331
A.4	Matrix Decompositions	334
A.4.1	Jordan Blocks and the Jordan Decomposition	334
A.4.2	Decompositions into Products of Special Matrices	335
A.4.3	Decompositions into Blocks	336
A.5	Matrix Perturbation Theory	337

A.6	The Matrix Exponential	338
A.7	Kronecker Products and Kronecker Sums	340
A.8	Complex Numbers and Fourier Analysis	342
A.9	Important Inequalities from the Theory of Linear Systems	344
A.10	The State-Transition Matrix and the Product Integral	346
A.11	Vector Calculus	349
A.11.1	Optimization in $\mathbb{R}^n$	349
A.11.2	Differential Operators in $\mathbb{R}^n$	351
A.11.3	Integral Theorems in $\mathbb{R}^2$ and $\mathbb{R}^3$	351
A.11.4	Integration by Parts in $\mathbb{R}^n$	353
A.11.5	The Chain Rule	353
A.11.6	Matrix Differential Calculus	354
A.12	Exercises	356
	References	360
