

Contents

1	Dynamical Systems Modelling of Landscape Transformations	1
1.1	The Dynamics of a Mediterranean Landscape	1
1.2	Regression and Transition Matrix Models	4
1.3	Building a Dynamical Systems Model	9
	References	14
2	Modelling Nonlinear and Complex Landscape Dynamics	17
2.1	From Linear to Non-Linear Differential Equations Models	17
2.2	Lotka-Volterra Models of Landscape Transformations	20
2.3	Nonlinear Dynamics and Lyapunov Stability	24
	References	26
3	Landscape Stability, Instability and Civilization Collapse	27
3.1	Landscape Stability in Geomorphology and Landscape Ecology	27
3.2	Landscape Instability and Civilization Collapse	33
3.3	Mathematical vs. Ecological Landscape Stability	35
	References	39
4	Markov Models of Landscape Dynamics	45
4.1	Building a Markov Model	45
4.2	Predictability of Landscape Dynamics with Markov Models	49
	References	55
5	Stochastic Landscape Simulation	59
5.1	Stochastic Simulation of Landscape Evolution	59
5.2	Terrain Simulation and Noise	70
	References	72
6	Stochastic Models of Complex Landscape Dynamics	75
6.1	Stochastic Lotka–Volterra Models	75
6.2	Modelling with Stochastic Differential Equations	78
6.3	Landscape Phase Transitions and Complexity	81

6.4	Determinism vs. Stochasticity in Modelling Landscape Dynamics	84
	References.	87
7	Modelling Landscape Sustainability	91
7.1	Landscape Sustainability	91
7.2	The Verhulst Model and Spatial Variants.	92
7.3	Landscape Stability and Sustainability	96
7.4	Stochastic Modelling of Landscape Sustainability	98
	References.	99
8	Modelling Landscape Resilience	101
8.1	Landscape Resilience.	101
8.2	Stochastic Differential Equations Modelling of Landscape Resilience.	103
	References.	115
9	Complexity, Non-Locality and Riddledness in Landscape Dynamics	119
9.1	Modelling Local Interactions with IBM/ABM Models.	120
9.2	Modelling Non-Local Interactions and Riddled Dynamics	123
9.3	Landscape Complexity, Computability and Dynamics	126
	References.	129
	Index.	135
