

Table of Contents

Readiness of the ATLAS liquid argon calorimeter for LHC collisions	1
1 Introduction	13
2 LAr calorimeter hardware status and data taking conditions	13
2.1 Main characteristics of the LAr calorimeter	13
2.2 Cryostat operation	13
2.3 High voltage status	14
2.4 Readout cell status	15
2.5 Data taking conditions	15
3 Electronic performance and quality of cell energy reconstruction	15
3.1 Energy reconstruction in the LAr calorimeter	16
3.2 Electronic stability	18
3.3 LAr calorimeter timing	20
3.4 Signal reconstruction studies and impact on intrinsic global energy resolution constant term	21
4 In situ EM calorimeter performance with cosmic muons	25
4.1 Monte Carlo simulation	25
4.2 Uniformity of the electromagnetic barrel calorimeter	25
4.3 Electromagnetic shower studies	28
5 Conclusions and perspectives	29
References	30
 The ATLAS Inner Detector commissioning and calibration	 33
1 Introduction	44
2 The ATLAS Inner Detector	45
3 Data samples and operation conditions	46
3.1 Data-taking periods	46
3.2 Operating conditions	47
3.3 Track reconstruction	48
3.4 Tracking triggers	49
3.5 Simulation	49
4 Detector timing	49
4.1 TRT timing	50
4.2 Pixel Detector timing	51
4.3 SCT timing	51
4.4 BCM timing	52
5 Sub-detector calibration	52
5.1 Pixel Detector calibration	52
5.2 SCT calibration	54
5.3 TRT calibration	54
6 Alignment	56
6.1 Global alignment	57
6.2 Local alignment of the Pixel Detector and SCT	57
6.3 Local alignment of the TRT	58
6.4 Summary and perspectives	58
7 Detector performance	59
7.1 Intrinsic detector efficiency	59
7.2 Lorentz angle measurement	60
7.3 Track parameter resolution	62

7.4 Energy-loss measurement	64
7.5 Transition radiation measurement.....	65
8 Conclusions	66
References.....	66
Drift Time Measurement in the ATLAS Liquid Argon Electromagnetic Calorimeter using Cosmic Muons.....	69
1 Introduction	80
2 Ionization signal in the calorimeter.....	81
3 Prediction of the ionization pulse shape.....	84
3.1 RTM method	85
3.2 FPM method.....	85
4 Description of the data	86
5 Extraction of the drift time	87
6 Results in the calorimeter barrel.....	89
6.1 Drift time measurement in pseudorapidity and azimuthal angle	89
6.2 Response uniformity	91
6.3 Electrode shift	91
7 Results in the calorimeter endcap.....	92
7.1 Drift time measurement in pseudorapidity and azimuthal angle	92
7.2 Response uniformity	92
7.3 Electrode shift	93
8 Drift time and velocity measurements	93
9 Systematic uncertainties	95
9.1 Comparison of the results obtained in the barrel with the two prediction methods	96
9.2 Different fit strategies.....	96
9.3 Variation of parameters of the cell.....	96
9.4 Effect of electron attachment	96
9.5 Variation of the bent triangle contribution.....	96
9.6 Variation of the parameter α	97
9.7 Summary of the systematic uncertainties.....	97
10 Direct determination of local gap and drift velocity at operating point	97
11 Conclusions.....	98
References.....	99
Commissioning of the ATLAS Muon Spectrometer with cosmic rays	101
1 The ATLAS Muon Spectrometer	112
2 Data sample and reconstruction software.....	114
2.1 Data sample	114
2.2 Muon reconstruction software.....	115
2.3 Muonboy track reconstruction	115
2.4 Moore track reconstruction	115
3 Trigger configuration during data taking	116
3.1 Barrel level-1 trigger	116
3.2 End-cap level-1 trigger.....	116
4 Data quality assessment.....	117
4.1 Introduction	117
4.2 MDT chambers.....	117
4.3 Barrel trigger chambers: RPC	117
4.4 End-cap trigger chambers: TGC	119
5 MDT chamber calibration	120
5.1 Calibration method.....	120
5.2 End-cap chambers calibration with monitoring chamber	122
6 Detector performance: efficiency and resolution.....	123
6.1 MDT	123
6.2 RPC	126

6.3 TGC	127
7 MDT optical alignment	128
7.1 End-cap chamber alignment	129
7.2 Barrel chamber alignment	131
8 Pattern recognition and segment reconstruction	134
9 Track reconstruction	136
9.1 Resolution	136
9.2 Efficiency	136
9.3 Momentum measurement	137
10 Summary	140
References	141
The ATLAS Simulation Infrastructure	143
1 Introduction	154
2 ATLAS offline software overview	154
2.1 ATLAS simulation overview	156
2.2 Large-scale production system	157
3 Event generation overview	158
3.1 Generator framework	158
3.2 General purpose generators	159
3.3 Specialized generators	160
3.4 New C++ generators	161
3.5 Parton distribution functions	162
3.6 Monte Carlo truth	162
3.7 Default parameters, tuning and bug fixing	162
4 ATLAS detector description	162
4.1 Simulated detector geometry	163
4.2 Databases and configuration	165
4.3 GeoModel and translations	165
4.4 Alternate layouts	166
5 Core simulation	167
5.1 Simulation input	168
5.2 Simulation initialization	169
5.3 Monte Carlo truth information	170
5.4 Physics list	171
5.5 Simulation optimizations	172
5.6 Hit storage format	174
5.7 Visualization	175
6 Digitization	175
6.1 Digitization configuration	176
6.2 Pile-up	177
6.3 RDO storage format	179
7 Fast simulations	180
7.1 Fast G4 simulation	180
7.2 ATLFast-I	181
7.3 ATLFast-II	183
7.4 Computing performance	185
7.5 Physics performance	186
8 Validation	186
8.1 Automated testing	188
8.2 Computing performance benchmarking	188
8.3 Physics validation	189
9 Summary and conclusions	190
References	191

Readiness of the ATLAS Tile Calorimeter for LHC collisions	195
1 Introduction	206
2 Detector and data taking setup	207
2.1 Overview of the Tile Calorimeter	207
2.2 Detector and data taking overview	209
3 Detector performance and signal reconstruction	210
3.1 Detector and data quality status overview	210
3.2 Energy and time reconstruction	211
3.3 Noise performance	213
4 Calibration	214
4.1 Charge injection system and gain calibration in the readout electronics	215
4.2 Calibration with laser system	216
4.3 Calibration based on ^{137}Cs radioactive γ -source	217
4.4 Calorimeter intercalibration	220
4.5 Uncertainty on the propagation of the EM scale from testbeam	221
4.6 Timing calibration	222
5 Performance with cosmic ray muons	223
5.1 Muon response compared to noise	224
5.2 Methods for muon response studies	224
5.3 Performance of energy response	227
5.4 ITC and gap/crack scintillator calibration	233
5.5 Performance of time response	235
6 Conclusions	237
