

TABLE OF CONTENTS

CHAPTER ONE. The Trace Formula for Compact Riemann Surfaces.

1. Preliminaries	1
2. Some elementary non-Euclidean geometry	5
3. Point-pair invariants	8
4. Technicalities	15
5. Setting up the trace formula	22
6. Carrying out the computation	24
7. Final form of the trace formula	30
Notes for chapter one	35

CHAPTER TWO. The Selberg Zeta Function.

1. Introduction	39
2. Primitive applications of the trace formula	42
3. Essentially primitive applications of the trace formula	53
4. Basic properties of $Z(s)$	66
5. The explicit formula for $\Psi_1(x)$	82
6. A more refined approach to the PNT	95
7. Structure theorem for $\mathcal{N}(T)$	115
8. An improved upper bound for $S(T)$	119
9. Bounds for the integrated functions $S_m(T)$	140
10. Integral representations for $Z'(s)/Z(s)$ and $\text{Log } Z(s)$	148
11. An explicit formula for $\Psi(x)$ [part one]	156
12. An explicit formula for $\Psi(x)$ [part two]	175
13. Behavior of the explicit formula near $x = 1$	189
14. Some applications of the explicit formula to the PNT	214
15. Further applications (using a different method)	239
16. Irregularities in the distribution of pseudo-primes	255
17. Proof of an \mathcal{L} result for $S(T)$	280
18. Some comments about mean-square results	297
Notes for chapter two	316

CHAPTER THREE. The Trace Formula for Vector-Valued Functions.

1. Preliminary remarks	326
2. The $L_2(\Gamma \backslash H, \mathcal{K})$ spectral theory [part one]	326
3. The $L_2(\Gamma \backslash H, \mathcal{K})$ spectral theory [part two]	335
4. Development of the trace formula for $L_2(\Gamma \backslash H, \mathcal{K})$	345
5. The trace formula for groups with elliptic elements	350
6. Some miscellaneous comments	352
Notes for chapter three	354

CHAPTER FOUR. The Trace Formula for Automorphic Forms of Weight m .

1. Introduction	355
2. Basic definitions, results, and notation	356
3. Recollection of some fundamental results of Roelcke	372
4. Setting up the trace formula for $L_2(\mathcal{N}, m)$	373
5. Recollection of some further results of Roelcke	407
6. Explicit computation of some convenient trace formulas	409
7. Main applications to analytic automorphic forms	430
8. Some remarks about the general $L_2(\mathcal{N}, m)$ trace formula	434
9. Final form of the trace formula for $m = 0$ and $m = 1$	438
10. An over-view of the situation (some miscellaneous remarks)	451
Notes for chapter four	453

CHAPTER FIVE. The Selberg Trace Formula for Modular Correspondences.

1. Introduction	462
2. Preliminaries and notation	462
3. Setting up the trace formula	479
4. The bootstrap lemma	488
5. Computation of some convenient trace formulas	489
6. Applications to analytic automorphic forms	491
7. Remarks about the general formula for $\text{Tr}(L\mathcal{M})$	494
8. Final form of $\text{Tr}(L\mathcal{M})$ for $m = 0$ and $m = 1$	494
9. The unified trace formula and some miscellaneous comments	496
Notes for chapter five	499

INDEX OF NOTATION. 500
