Introduction

Rotation, Lithium and Mixing, <i>E. Schatzman</i>	3
---	---

The Observational Facts

Surface Abundances, <i>G. Cayrel de Strobel</i>	29
Stellar Rotation Prior to the Main Sequence, <i>J. Bouvier</i>	47
The Internal Rotation of the Sun, <i>W. Däppen</i>	69
Loss of Mass and Angular Momentum: The Observational Point of View, <i>C. Catala</i>	87
Pre-Main-Sequence Evolutionary Tracks and Lithium Burning, <i>I. Mazzitelli</i>	89

Our Physical Knowledge

Mass Transport and Mixing by Waves, <i>E. Knobloch</i>	109
Turbulent Transport in Stratified and Rotating Fluids, <i>E. J. Hopfinger</i>	119
Penetration and Overshooting from a Convection Zone, <i>J. M. Massager</i>	129
Turbulent Transport in Stellar Radiation Zones: Causes and Effects, <i>J.-P. Zahn</i>	141
Will a Magnetic Field Inhibit Turbulent Transport?, <i>H. C. Spruit</i> . .	151
Fast Dynamo Action - A Critical Problem for Solar Magnetism, <i>H. K. Moffatt</i>	163

Interpreting the Observations

Observational Constraints on the Turbulent Diffusion Coefficient in Late Type Stars, <i>A. Baglin and P. Morel</i>	167
Probing Stellar Interiors, <i>S. Vauclair</i>	173
Conclusion, <i>J.-P. Zahn</i>	183
