List of Contributors	xv
1 HIV Infection: A Cellular Approach	
<i>J.N. Weber</i>	1
The Human Immunodeficiency Viruses	1
Structure of HIV and Viral Protein Products	1
Simian Immunodeficiency Viruses	4
Use of the SIV Model	4
Strain Variations of HIV	4
Cellular Tropism of HIV	5
Pathogenesis of HIV Infection	6
Direct Cytopathic Effect of CD4-Positive Cells	6
Direct Infection of CD4-Negative Cells	6
Infection of Monocytes/Macrophages	6
Contribution of Other Infectious Co-factors	7
Immune Response to Infected Cells	7
2 Epidemiology and Natural History of HIV Infection: An Overview	
<i>I.V.D. Weller</i>	9
Introduction	9
Definition	9
Modes of Transmission of HIV	9
Global Epidemiology	10
Natural History of Infection: Classification	11
Centers for Disease Control (CDC) Classification System for HIV	
Infection	11
Progression to Symptomatic Disease	12
Natural History of Infection: Clinical Aspects	13
Prognostic Laboratory Markers	14
Tumours	15
Kaposi's Sarcoma	15
Lymphoma	15
Opportunistic Infections	15
Pulmonary Complications	16
Gastrointestinal and Hepatic Complications	16
Neurological Complications	17
Conclusions	17

3 Neurological Complications of HIV Infection: Clinical Aspects	
<i>M.J.G. Harrison</i>	21
Seroconversion Illness	22
Asymptomatic Period	23
HIV Meningitis	23
Peripheral Neuropathy	23
Myopathy/Polymyositis	23
ARC/AIDS	23
Mononeuritis Multiplex	23
Myelopathy	24
Peripheral Neuropathy	24
Encephalopathy	25
Cerebrovascular Disease	26
Myopathy	26
Opportunistic Infections	26
Parasites	26
Fungi	27
Viruses	28
Spirochaetes/Bacteria	29
Tumours	30
Paediatric AIDS	30
 4 Acquired Immune Deficiency: Neuroradiological Imaging	
<i>B. Kendall</i>	35
Pre-seroconversion	35
Seroconversion to HIV-Positive	35
AIDS	36
Cytomegalovirus Infection	37
Progressive Multifocal Leukoencephalopathy	38
Varicella Zoster Infection	38
Herpes Simplex Infection	38
Toxoplasmosis	39
Fungal Infections	42
Other Infections	44
B-Cell Lymphomas	44
Strokes	44
Paediatric AIDS	45
Response to Therapy	46
Imaging Methods	46
Imaging Abnormalities	47
Intracranial Lesions	47
Myelopathy	48
Head and Neck Disease	49
 5 General Pathology	
<i>J.N. Harcourt-Webster</i>	53
Introduction	53
Lymphoreticular System	53
Lymph Nodes	54
Neoplasms	56
Opportunistic Infections of Lymph Nodes	59
Spleen	60
Bone Marrow	60

Other Sites	61
Skin	61
Non-infectious Disorders	62
Infectious Diseases	62
Neoplasms	65
Respiratory System	68
<i>Pneumocystis carinii</i> Pneumonia	68
Cytomegalovirus Pneumonitis	70
Other Types of Pneumonitis	70
Neoplasms	72
Cardiovascular System	72
Alimentary System	73
Mouth and Pharynx	74
Oesophagus and Stomach	75
Intestinal Tract	76
Hepatopancreatic System	84
Anorectum	86
Genito-urinary System	87
Endocrine System	88
 6 Pathology of the Nervous System	
<i>F. Scaravilli, F. Gray, J. Mikol and E. Sinclair</i>	99
Introduction	99
Infections of the Central Nervous System by HIV	100
Neuropathology	101
Opportunistic Infections: Viral	107
Cytomegalovirus Encephalitis	107
Progressive Multifocal Leukoencephalopathy	113
Herpes Simplex Virus	117
Varicella Zoster Virus	119
Opportunistic Infections: Fungal	121
Cryptococcosis	122
Aspergillosis	123
Candidosis	124
Coccidioidomycosis	124
Other Mycoses	125
Opportunistic Infections: Protozoal	125
Toxoplasmosis	125
Other Protozoal Infections	131
Opportunistic Infections: Bacterial	133
<i>M. tuberculosis</i>	133
Atypical Mycobacteria	134
Other Bacterial Infections	135
Cerebrovascular Disorders	135
Neoplasms of the Central Nervous System	137
Non-Hodgkin's Lymphomas	137
Hodgkin's Disease	145
Lymphomatoid Granulomatosis	145
Kaposi's Sarcoma	146
Other Lesions	147
Lesions of the Pituitary Gland	148
Multiple Intracranial Lesions	149
Haemophilia and AIDS	150
Brain Biopsy	151

Appendix. Morphological Demonstration of Infectious Organisms Within the CNS in AIDS	152
Tissue Preparation	152
Rapid Preparations	153
Bacteria and Fungi	153
Protozoa	153
Viruses	153
Detection of Viral DNA by In Situ Hybridization with Biotinylated DNA Probes	155
HIV	156
Modified Avidin–Biotin Immunohistochemical Method, for HIV	156
 7 HIV-Related Dementia: Pathology and Possible Pathogenesis	
<i>H. Budka</i>	171
Introduction	171
Incidence and Definition of HIV-Related Dementia	171
HIV-Associated Neuropathology	172
HIV-Specific Central Nervous System Pathology	173
HIV-Associated (Possibly HIV-Induced) Central Nervous System Changes	175
Clinico-neuropathological Correlation	177
Neuroradiological–Neuropathological Correlation	178
Pathogenesis	179
Cellular Tropism of HIV in the Nervous System	180
Development of the Nervous Tissue Lesion by HIV: The Role of the Virus Load	180
Indirect Mechanisms of Damage	181
Special HIV Variants in the Nervous System	182
Contributory Role of Opportunistic Infections	182
Immune Pathogenesis	182
Metabolic Pathogenesis	182
 8 Myelopathies	
<i>C.K. Petito</i>	187
Introduction	187
HIV-Related Myelopathies	189
Vacuolar Myelopathy	189
Gracile Tract Degeneration	192
Delayed Myelination of Corticospinal Tracts	193
Human Immunodeficiency Virus Myelitis	193
Herpes Virus Myelitis	194
Cytomegalovirus	194
Herpes Simplex Virus	195
Varicella Zoster Virus	196
 9 Neuropathology of AIDS in Children	
<i>L.R. Sharer and M. Mintz</i>	201
Introduction	201
Clinical Manifestations	202
Pathologic Features	202
Gross Neuropathologic Findings	203
Microscopical Findings	203

Miscellaneous Findings	207
Review of Reported Cases	209
Conclusions	210
10 Peripheral Nerve and Muscle Disease in HIV Infection	
<i>G.N. Fuller and J.M. Jacobs</i>	215
Introduction	215
Classification	215
Seroconversion	216
HIV-Seropositive	216
Inflammatory Neuropathies	216
VII Nerve Palsy	218
ARC and AIDS	218
Subclinical	218
Mononeuritis Multiplex	218
Cranial Neuropathies	221
Polyradiculopathies	221
Distal Symmetrical Peripheral Neuropathies	222
Toxic Neuropathy	228
Incidental and Isolated Case Reports	229
Autonomic Neuropathies	229
Tuboreticular Inclusions	229
Myopathies	229
Polymyositis	229
Non-inflammatory Myopathy	230
Nemaline Rod Myopathy	230
Type II Muscle Fibre Atrophy	230
Zidovudine-Induced Myopathy	231
11 Role of the Macrophage in HIV Encephalitis	
<i>M.M. Esiri</i>	235
Mononuclear Phagocytes of the Nervous System: Macrophages and Microglia	235
Changes in the Mononuclear Phagocyte Population of the CNS in HIV Infection and AIDS	240
Infection of Mononuclear Phagocytes of the Nervous System in HIV Infection and AIDS	242
Evidence for Infection of Other CNS Cell Types by HIV	243
Comparison of HIV with Other Lentiviruses: Inflicted Damage to the CNS	244
Pathogenesis of CNS Damage by HIV and its Relation to Mononuclear Phagocyte Infection: Possibilities and Remaining Uncertainties	244
Summary	246
12 Immunohistochemical and In Situ Hybridization Study of HIV Encephalitis	
<i>C.A. Wiley</i>	251
Introduction	251
Visualization of HIV in the Nervous System	252
Electron Microscopy	252
Immunocytochemistry	252
In Situ Hybridization	252
Polymerase Chain Reaction	253

Potential Mechanisms of HIV-Associated Neurological Diseases	253
Indirect Causes of CNS Damage	253
Direct Viral Causes of CNS Damage	254
Conclusions	255
Unanswered Questions	255
 13 Overview of HIV in the Nervous System	
<i>P.G.E. Kennedy</i>	259
General Considerations Concerning Neurological Involvement	259
Pathology and Pathogenesis	261
Neuropsychological and Neurophysiological Assessment in HIV Infection ..	262
Paediatric AIDS	263
Treatment Considerations	263
Animal Models for HIV Infection	264
 Subject Index	267
