Prologue	1
The Author's Dilemma	2
1 Information: Abstraction or Reality?	5
Introduction.....	5
Can Information Exist Outside the Human Brain?	7
Can Information be Processed Outside the Human Brain?.....	8
Forms of Human Information and its Communication	9
Biological Information Systems	12
Inorganic Information Systems.....	13
Non-human Information Processing	15
Some Epistemological Considerations.....	17
2 Information Physics: An Introduction	21
The Reality of Information.....	21
The Heart of the Concept	25
Information: The Hidden Dimension.....	28
3 Information and Entropy: The Mathematical Relationship	33
Information and Organisation	33
The Second Law of Thermodynamics	34
The Boltzmann/Schrödinger Equation	37
Information as an Inverse Exponential Function of Entropy	38
The Constant c	40
4 Measuring the Information Changes of Altered Physical States	43
Measuring the Information Content of a Crystal.....	43

Proteins as Information Systems	46
The Denaturation of Trypsin	48
Concluding Remarks	50
5 Information and Entropy: Further	
Implications	53
Introduction.....	53
Information and Entropy as Viewed by the Communications Engineers	54
Positive Entropy	57
Negative Entropy	59
Information Magnitudes	68
The Evolution of the Universe	70
6 Some Further Considerations About the	
Interrelationship Between Information and	
Energy	73
Introduction.....	73
Pure Energy: Heat, the Antithesis of Information	74
The Information Content of Energy	75
Motion, Distance and Time	76
Information and Potential Energy	81
The Interconversion of Energy and Information	84
Information Machines	85
Structural vs Kinetic Information	87
Transformations Between Kinetic and Structural Information	91
7 Information and Work	93
Introduction.....	93
The Relationship Between Work and Information	94
Energy Transducers.....	96
Work in Biological Systems	99
Reassessing the Work Equations	100
Measuring the Information Content of Electrical Work	104
8 Summary and Concluding Remarks	107
Introduction.....	107
The Basic Propositions	107

Historical Perspective	109
Why Has Information Been Overlooked?	111
The Need for Models and Theories	111
The Relevance of Information Physics for a General Theory of Information	112
Some Concluding Thoughts	115
Appendixes	119
A. Speculations on Electromagnetic Radiation and Particles of Information	121
B. Further Speculations: Implications for Atomic Structure	133
C. A Smaller Universe	141
D. Other Universes?	147
Subject Index	153
