1 History of Robotic Surgery in Urology

András Hoznek

1.1	Introduction	1
1.2	Background	1
1.3	Endourology	2
1.3.1	Transurethral Prostate Resection	2
1.4	Ablatherm	2
1.5	Prostate Biopsy	2
1.6	Percutaneous Renal Access	3
1.7	Laparoscopic Surgery	3
1.7.1	Robotic Camera Holders	3
1.7.2	Master-Slave Systems	4
1.7.2.1	Clinical Experience with Master-Slave Systems in Urological Laparoscopy	5
1.8	Radical Prostatectomy	6
1.9	Radical Cystectomy and Urinary Diversion	6
1.10	Pyeloplasty	6
1.11	Live Donor Nephrectomy	7
1.12	Future of Robotic Surgery	7

2 Surgical Anatomy of the Prostate for Radical Prostatectomy

Arnauld Villers and Thierry Piechaud

2.1	Introduction	11
2.2	Pelvic Fasciae, Parietal and Visceral, and Their Surgical Importance	11
2.2.1	Parietal Fasciae	12
2.2.2	Visceral Fasciae	12
2.2.3	Fascial Surgical Dissection	14
2.2.4	Nerve-sparing Technique	15
2.3	Proximal Bladder Neck Sphincter and Detrusor Apron	16
2.3.1	Urethral Stump (Sphincteric Urethra) Preservation	16
2.3.2	Prostatic Capsule	16
2.3.3	Rectourethralis	17

3 Robotic Radical Prostatectomy: Extraperitoneal Approach

Hubert John

3.1	Introduction	19
3.2	Extraperitoneal Approach: Step by Step	19
3.3	Discussion	23
3.3.1	Patient Positioning	23
3.3.2	Trocar Placement	24
3.3.3	Operative Time	24
3.3.4	Avoiding the Intraperitoneal Cavity	25
3.4	Conclusion	26

4 Robotic Radical Prostatectomy: Transperitoneal Access

Charles-Henry Rochat and Jean Sauvain

4.1	Introduction	29
4.2	Steps of the Transperitoneal Access	30
4.2.1	Preparation	30
4.2.2	Installation of the Patient	31
4.2.3	Access to the Pelvis and Incision of the Anterior Peritoneum	31

5 Pelvic Lymphadenectomy for Localized Prostate Cancer and Robotic-assisted Radical Prostatectomy

Oliver W. Hakenberg and Manfred P. Wirth

5.1	Arguments for and Against Routine Pelvic Lymphadenectomy	37
5.2	Morbidity of Pelvic Lymphadenectomy	37
5.3	Extent of Pelvic Lymphadenectomy	38
5.4	Location of Node-positive Disease and Lymphatic Drainage	39
5.5	Purpose of Lymphadenectomy	40
5.6	Influence of Lymphadenectomy on Outcome in RP	41
5.7	The Likelihood of Nodal Disease Based on the Use of Nomograms	42
5.8	PLND or no PLND?	43
5.9	Pelvic Lymphadenectomy in Conventional Laparoscopic and Robot-assisted Radical Prostatectomy	44
5.10	Use of PLND in Robot-assisted Radical Prostatectomy	44
5.11	Technique of PLND in Robotic Radical Prostatectomy	45
5.12	Conclusion	47

6 Bladder Neck Dissection During Robotic-assisted Laparoscopic Radical Prostatectomy

Thierry Piechaud and Filippo Annino

6.1	Introduction	51
6.2	Anatomy of the Bladder Neck	51
6.3	Anatomical–Surgical Correlations	52
6.3.1	Median Lobe	52
6.3.2	Previous TURP	53
6.4	Functional and Oncological Principles of Bladder Neck Preservation	53
6.5	Surgical Technique of Bladder Neck-sparing Dissection During Robotic-assisted Prostatectomy	54
6.5.1	Median Lobe	59
6.5.2	Previous TURP	60
6.5.3	Wide Resection of the Bladder Neck	61
6.5.4	Indications and Choice of Technique	61
6.6	Bordeaux Series	61
6.7	Conclusion	62

7 Nerve-sparing Techniques for Laparoscopic and Robot-assisted Radical Prostatectomy

Ketul K. Shah, Mario F. Chammas Jr.,

Kenneth J. Palmer, Rahul Thaly, Vipul R. Patel

7.1	Introduction	65
7.2	Neurovascular Anatomy	65
7.3	Neurovascular Bundles	66
7.4	Nerve-sparing Techniques and Results	66
7.4.1	Athermal Approaches to Nerve Sparing	67
7.4.2	Seminal Vesicle Tip Preservation to Improve Potency	67
7.5	Categorization of Approaches to Nerve-sparing Robotic Prostatectomy	67
7.5.1	Nerve Sparing in Robotic-assisted Laparoscopic Prostatectomy ...	68
7.5.1.1	The Henry Ford Technique: the Veil of Aphrodite	68
7.5.1.2	The Ohio State Technique: Athermal Early Retrograde NVB Release During Antegrade Prostatectomy	69
7.5.1.3	UC Irvine: Antegrade Clamp and Suture Technique	72
7.5.1.4	University of Chicago: Antegrade Thermal Clipless Approach	73
7.5.2	Nerve Sparing in Laparoscopic Radical Prostatectomy	74
7.5.2.1	Cleveland Clinic: Clamp-and-Suture Technique with Ultrasound Guidance	74
7.5.2.2	Heilbronn Technique	75
7.6	Discussion	75
7.7	Conclusion	76

8 Vattikuti Institute Prostatectomy: Veil of Aphrodite Nerve-sparing Technique

Alok Shrivastava, James O. Peabody, Mani Menon

8.1	Introduction	81
8.2	Indications and Patient Selection	82
8.3	Setup	82
8.3.1	Operating Room	82
8.3.2	The Surgical Team	83
8.3.3	Instruments	83
8.3.3.1	Robotic Instruments	83
8.3.3.2	Laparoscopic Instruments	83
8.3.3.3	Sutures	83
8.4	Technique of VIP	84
8.4.1	Specific Patient Preparation	84
8.4.2	Patient Positioning and Port Placement	85
8.4.3	Development of the Extraperitoneal Space	85
8.4.4	Lymph Node Dissection	86
8.4.5	Bladder Neck Transection	86
8.5	Nerve-sparing Technique: the "Veil of Aphrodite"	93
8.5.1	Exposure of Prostatic Apex and Control of Dorsal Venous Complex	96
8.5.2	Urethrovesical Anastomosis	96
8.5.3	Retrieval of Specimen and Completion of Surgery	99
8.5.4	Postoperative Care	99
8.6	Crossing Over the Learning Curve	99
8.6.1	Structured Program	100
8.6.2	Setup	100
8.6.3	Patient Selection	100

9 Robotic Assisted Radical Prostatectomy: the Apical Dissection

*Xavier Cathelineau, Jamison Jaffe, Eric Barret,
François Rozet, Guy Vallancien*

9.1	Introduction	103
9.2	Preparation of the Apex	103
9.3	Dorsal Venous Complex	106
9.4	Completion of the Neurovascular Bundles	107
9.5	Urethral Transection and Division of the Rectourethralis	107

10 Vesicourethral Anastomosis

Jean Joseph

10.1	Introduction	109
10.2	Semicontinuous Suturing	109
10.3	Continuous Suturing	111

10.4	Interrupted Suturing	112
10.5	Complications	113
10.5.1	Intraoperative	113
10.5.2	Postoperative	114
10.6	Conclusion	116

11 Outcome Measures After Robot-assisted Laparoscopic Prostatectomy

Esequiel Rodriguez, Douglas W. Skarecky, Thomas E. Ahlering

11.1	Introduction	117
11.2	Operative Results	118
11.2.1	Operative Time	118
11.2.2	Blood Loss and Transfusions	118
11.2.3	Peri-operative Complications	126
11.2.4	Convalescence	126
11.3	Oncological Control	127
11.3.1	Surgical Margins and PSA Recurrence	127
11.4	Quality of Life	129
11.4.1	Continence	129
11.4.2	Potency	130
11.5	Conclusion	132

12 Urinary Incontinence After Robotic-assisted Laparoscopic Radical Prostatectomy

Kevin G. Chan and Timothy G. Wilson

12.1	Introduction	137
12.2	Incidence of Urinary Incontinence Following Radical Prostatectomy	137
12.3	Mechanism of Urinary Incontinence Following Radical Prostatectomy	139
12.4	Risk Factors for Urinary Incontinence Following Radical Prostatectomy	140
12.5	Evaluation for Urinary Incontinence Following Radical Prostatectomy	141
12.6	Management of Urinary Incontinence Following Radical Prostatectomy	142
12.6.1	Detrusor Overactivity	142
12.6.2	Urethrovessical Anastamotic Strictures	142
12.6.3	Post-prostatectomy Stress Urinary Incontinence	143
12.6.3.1	Behavioral Therapy	143
12.6.3.2	Medical Therapy	144
12.6.3.3	Transurethral Injection Therapy	144
12.6.3.4	Male Slings	145
12.6.3.5	Artificial Urinary Sphincter	146
12.7	Conclusion	148

13 Erectile Function After Robotic Prostatectomy: Anatomical Aspects and Treatment

Juan I. Martinez-Salamanca and Ashutosh Tewari

13.1	Introduction	153
13.2	Incidence	153
13.3	Pathophysiology	154
13.4	Anatomical Foundations About Nerve-sparing Surgery	155
13.4.1	Tri-zonal Concept for the Nerve-sparing Robotic Prostatectomy	155
13.4.1.1	Proximal Neurovascular Plate	156
13.4.1.2	Predominant Neurovascular Bundles	157
13.4.1.3	Accessory Distal Neural Pathways	158
13.4.2	The Distribution and Functional Classification of the Autonomic Ganglion Cells	159
13.4.2.1	Distribution	159
13.4.2.2	The Functional Classification	161
13.5	Robotic Surgical Techniques (Modifications) to Preserve Sexual Function	161
13.5.1	Athermal Robotic Technique (Cornell University)	161
13.5.1.1	Bladder Neck Transection	161
13.5.1.2	Seminal Vesicle and Vas Dissection	162
13.5.1.3	Incision of Denonvillier's Fascia and Posterior Dissection to the Apex	162
13.5.1.4	Lateral Pedicle Control	162
13.5.1.5	Release of Neurovascular Bundles	162
13.5.1.6	Apical Dissection, DVP Ligation and Urethral Transection	164
13.5.2	"Veil of Aphrodite" Nerve Sparing	164
13.5.3	"Cautery-Free" Neurovascular Bundle Preservation	165
13.5.4	"Modified Clipless Antegrade Nerve Preservation"	165
13.6	Robotic Series: Sexual Outcomes	166
13.6.1	Weill Medical College (Cornell University) Experience	166
13.7	Erectile Dysfunction After Radical Prostatectomy: Treatment Strategies	167
13.7.1	Evaluation	167
13.7.2	Questionnaire-based Assessment	167
13.8	Clinical Assessment of Patient with ED After Radical Prostatectomy	168
13.8.1	Nocturnal Penile Tumescence Testing	168
13.8.2	Duplex Doppler Assessment	168
13.8.3	Dynamic Infusion Caverosometry and Caverosography	169
13.9	Treatment	169
13.9.1	Phosphodiesterase-5 inhibitors	169
13.9.1.1	Sildenafil	169
13.9.1.2	Vardenafil	170
13.9.1.3	Tadalafil	170
13.9.2	Intracavernosal Injections	170
13.9.3	Vacuum Constriction Devices	171
13.9.4	Combination Therapy	172
13.10	Treatment Protocol for the Patient with ED After RP	172

14 Robotic Pyeloplasty*L. Henning Olsen and Yazan F. Rahwashdeh*

14.1	Introduction	177
14.2	The Retroperitoneal Approach	178
14.2.1	Patient Preparation and Positioning	178
14.2.2	Retroperitoneal Access and Port Placement	179
14.2.3	Docking of the Surgical Cart and Placement of Instruments	180
14.2.4	The Procedure	180
14.3	The Transperitoneal Approach	182
14.3.1	Patient Preparation and Positioning	182
14.3.2	Transperitoneal Access and Port Placement	183
14.3.3	Docking of the Surgical Cart and Placement of Instruments	183
14.3.4	The Procedure	183
14.4	Follow-up	184
14.5	Surgical Outcome	184
14.5.1	Operative Time	184
14.5.2	Success Rates	186
14.5.3	Complications	186
14.6	Conclusion	186

15 Robot-assisted Radical Cystectomy*Khurshid A. Guru, Martin N. Jonsson, Peter Wiklund*

15.1	Introduction	189
15.2	Patient Selection	190
15.3	Preoperative Preparation	190
15.3.1	Equipment	190
15.4	Port Placement	191
15.5	Identification and Dissection of Ureters	192
15.6	Male Cystectomy	192
15.6.1	Posterior Dissection	192
15.6.2	Lateral Dissection of the Bladder	192
15.6.3	Nerve-sparing Dissection	193
15.6.4	Apical Dissection	194
15.7	Female Cystectomy	194
15.7.1	Technique Where Four Robotic Arms Are Used	194
15.7.2	Control and Positioning of Uterus	194
15.7.3	Control of Vascular Pedicle	194
15.7.4	Vaginal Dissection	195
15.7.5	Mobilization of Bladder and Dissection of Urethra	195
15.7.6	Reconstruction of the Vaginal Wall	196
15.8	Pelvic Lymph Node Dissection	196
15.9	Robot-assisted Urinary Diversion	198
15.9.1	Robot-assisted Ileal Conduit Intracorporeal Technique	198
15.9.2	Robot-assisted Orthotopic Neobladder, Intracorporeal Technique	198
15.10	Discussion	200

16 Robotic Kidney Surgery*Jorn H. Witt*

16.1	Introduction	203
16.2	Patient Evaluation and Preparation	203
16.3	General Considerations for Robotic Kidney Surgery	204
16.4	Surgical Approaches	205
16.4.1	Transperitoneal Approach	206
16.4.1.1	Patient Positioning and Port Placement	206
16.4.1.2	Left-side Kidney Preparation	207
16.4.1.3	Dissection and Securing of the Renal Hilum	208
16.4.1.4	Right-side Kidney Preparation	209
16.4.2	Retroperitoneal Approach	209
16.4.2.1	Patient Positioning and Port Placement	209
16.4.2.2	Kidney Preparation	210
16.5	Nephrectomy	210
16.5.1	Simple Nephrectomy	210
16.5.2	Donor Nephrectomy	211
16.5.3	Radical Nephrectomy	212
16.6	Nephron-sparing Procedures	212
16.7	Nephroureterectomy	214
16.8	Other Procedures	215
16.9	Postoperative Management	216
16.10	Complications and Management	216
16.11	Future Perspectives	217

17 Robotic Adrenal Surgery*Elias Hyams and Michael D. Stifelman*

17.1	Introduction	223
17.2	Indications	224
17.3	Operative Technique	226
17.3.1	Right Robotic Adrenalectomy	226
17.3.2	Left Adrenalectomy	228
17.4	Results	232
17.5	Considerations	235
17.6	Conclusion	236

18 Robotic Antireflux Surgery in Children*Piet Callewaert*

18.1	Introduction	239
18.2	Conventional Laparoscopic Techniques in the Treatment of VUR	240
18.3	Robotically Assisted Techniques	241
18.3.1	General Considerations	241

18.3.2	Intravesical Technique	241
18.3.2.1	Overview	241
18.3.2.2	Detailed Description of Technique	241
18.3.2.2.1	Patient Positioning	241
18.3.2.2.2	Port Placement	242
18.3.2.2.3	Sequence of Surgical Steps	242
18.3.2.2.4	Port-site Closure	243
18.3.2.2.5	Postoperative Management	244
18.3.2.2.6	Results and First Impressions	245
18.3.3	Extravesical Technique	246
18.3.3.1	Overview	246
18.3.3.2	Detailed Description of Technique	246
18.3.3.2.1	Patient Positioning	246
18.3.3.2.2	Port Placement	246
18.3.3.2.3	Sequence of Surgical Steps	247
18.3.3.2.4	Postoperative Management	248
18.3.3.2.5	Results and First Impressions	248
18.4	Discussion and Conclusion	249

19 Economic Aspects of Starting a Da Vinci Robotic Surgery Program

Roland Peplinski and Ryan Rhodes

19.1	Introduction	253
19.2	Description of the Technology	253
19.3	Hospital Resources: Broad Economic Impact	254
19.3.1	Market Share Growth and Maximizing Efficiency	254
19.3.2	Clinical Validation	256
19.3.2.1	Urology Procedures	256
19.3.2.2	Cardiothoracic Procedures	256
19.3.2.3	Gynecological Procedures	257
19.3.2.4	General/Pediatric Surgery Procedures	257
19.3.2.5	Universal Patient Benefits	258
19.3.3	Business Model	258
19.3.4	Market Analysis	259
19.3.5	Cost Analysis	259

Subject Index	263
