1. Introduction	1
------------------------------	----------

Part I. The Phase Structure of Quantum Field Systems

2. Formulation of the Method	9
2.1 Breaking Symmetry in Quantum Field Theory	9
2.2 Canonical Quantization and the S -matrix	15
2.3 The Renormalization Group	18
2.3.1 Renormalization Schemes	18
2.3.2 Renormalization Group Equations	19
2.4 Unitary Nonequivalent Representations of the Canonical Relations	21
2.4.1 An Infinite Number of Degrees of Freedom	22
2.4.2 Canonical Transformations	25
2.4.3 The Van Hove Model	28
2.4.4 Renormalization Group Transformations	28
2.5 The Oscillator Representation Method	30
3. The Phase Structure of the $(\varphi^2)^2$ Field Theory in R^{1+1} ..	33
3.1 The One-Component φ^4 Model	34
3.1.1 The Initial Representation for $G \ll 1$	34
3.1.2 The Canonical Transformation	34
3.1.3 The Phase Structure	36
3.2 The $O(N)$ -Invariant Model $(\varphi^2)^2$ in R^{1+1}	39
3.2.1 Initial Representation	40
3.2.2 The Canonical Transformation	40
3.2.3 The Phase Structure	42
4. The Phase Structure of the Three-Dimensional φ^4 Theory	45
4.1 The Hamiltonian φ^4 in R^{2+1}	45
4.2 The Canonical Transformations	47
4.3 The Symmetric Model	50
4.3.1 The BS-phase	51
4.3.2 The S-phases	52

4.4	The Model with SSB in the Initial Representation	53
4.4.1	The BS-phase	54
4.4.2	The S-phase	54
4.5	The $O(N)$ -Invariant Model in R^{2+1}	55
4.5.1	The Hamiltonian of the Model	55
4.5.2	The Canonical Transformation	56
4.5.3	The Phase Structure	60
4.6	Stability Under Change of the R-scheme in the Initial Representation	65
4.6.1	Subtraction at Zero External Momentum and Arbitrary "Mass" in Propagators	67
4.6.2	Dimensional Regularization and the Minimal Subtraction Scheme	68
4.6.3	Dimensional Regularization and Zero-Momentum Sub- traction	69
5.	The Four-Dimensional φ^4 Theory	71
5.1	The Hamiltonian $(\varphi^4)_4$ and Canonical Transformations	71
5.2	The Symmetric Phases	73
5.3	Dynamical Symmetry Breaking	77
5.4	The Asymptotically Free Model	78
5.5	A Correlation Between the Phase Structure and UV Divergences	79
6.	The φ^4 Theory at Finite Temperatures	81
6.1	The Two-Dimensional Model	81
6.1.1	The Hamiltonian at Zero Temperature	81
6.1.2	The Thermo Field Dynamics	83
6.1.3	The Symmetric Model	86
6.1.4	The Model with SSB in the Initial Representation	87
6.2	The Three-Dimensional Model φ^4 at Finite Temperatures ...	91
6.2.1	The Thermal Vacuum Representation	91
6.2.2	The Symmetric Model	93
6.2.3	The Case of SSB in the Initial Representation	96
6.3	The Systems in R^{1+1} and R^{2+1}	98
7.	The Two-Dimensional Yukawa Theory	99
7.1	The Hamiltonian and Renormalization	100
7.2	The Canonical Transformation	101
7.3	The Phase Structure	104
7.3.1	The Pure Yukawa Interaction	104
7.3.2	The Yukawa Model with Boson Self-Interaction	109
7.4	Comparison with Other Approaches	115
7.4.1	The Renormalized Formulation	116
7.4.2	The Regularized Formulation	118

Part II. The Gaussian Equivalent Representation of Functional Integrals in Quantum Physics

8. Path Integrals in Quantum Physics	127
8.1 Gaussian Path Integrals	127
8.2 A Short Historical Review on the Path Integration Method	131
8.3 The Feynman Path Integral Formalism in Quantum Mechanics	134
8.4 PIs as Solutions of Differential Equations	138
8.5 Path Integrals in Quantum Field Theory	142
9. The Gaussian Equivalent Representation of Functional Integrals	145
9.1 A General Description of the Method	145
9.2 The GER Method for Quantum Statistics	150
10. The Polaron Problem	157
10.1 Introduction	157
10.2 The Polaron Path Integral Formulated in d -dimensions	159
10.3 Application of the GER Method to the d -dimensional Polaron	161
10.4 Bounds for the Polaron Ground-State Energy in d Dimensions	162
10.5 Particular Case of Feynman's Estimation	165
10.6 Corrections to the Leading Term of the Energy	166
10.7 Scaling Relations	168
10.8 Numerical Results	169
10.8.1 The Weak Coupling Limit	170
10.8.2 The Strong Coupling Regime	174
10.8.3 The Intermediate Coupling Range	177
11. The Character of the Phase Transition in Two- and Three-Dimensional φ^4 Theory	179
11.1 A Statement of the Problem	179
11.2 The Renormalized Lagrangian of the $\varphi_{2,3}^4$ - Model	180
11.3 The Effective Potential in $\varphi_{2,3}^4$ - Theory	181
11.4 The Leading-Order Term of the EP as the "Cactus-type" Potential in φ_2^4	183
11.5 The Non-Gaussian Correction in φ_2^4	184
11.6 The Strong Coupling Regime in φ_3^4	187
12. Wave Propagation in Randomly Distributed Media	189
12.1 The Green Function of the Wave Equation	189
12.2 Calculation of the PI by the GER Method	192
12.3 The Green Function for Large Distances	195
