Introduction	1
Acknowledgements	13
Chapter 1. Background on Differential Geometry	14
1.1. Fibre Bundles and Connections	14
1.2. Riemannian Manifolds	32
1.3. Superspaces	38
1.4. Superconnections	43
1.5. Characteristic Classes	46
1.6. The Euler and Thom Classes	51
Bibliographic Notes	61
Chapter 2. Asymptotic Expansion of the Heat Kernel	63
2.1. Differential Operators	64
2.2. The Heat Kernel on Euclidean Space	72
2.3. Heat Kernels	74
2.4. Construction of the Heat Kernel	77
2.5. The Formal Solution	81
2.6. The Trace of the Heat Kernel	87
2.7. Heat Kernels Depending on a Parameter	98
Bibliographic Notes	101
Chapter 3. Clifford Modules and Dirac Operators	102
3.1. The Clifford Algebra	103
3.2. Spinors	109
3.3. Dirac Operators	113
3.4. Index of Dirac Operators	122
3.5. The Lichnerowicz Formula	126
3.6. Some Examples of Clifford Modules	127
The De Rham Operator	128
The Signature Operator	131
The Dirac Operator on a Spin-Manifold	134
The $\bar{\partial}$ -Operator on a Kähler Manifold	135
Bibliographic Notes	141

Chapter 4. Index Density of Dirac Operators	143
4.1. The Local Index Theorem	143
The Gauss-Bonnet-Chern Theorem	148
The Hirzebruch Signature Theorem	150
The Index Theorem for the Dirac Operator	151
The Riemann-Roch-Hirzebruch Theorem	151
4.2. Mehler's Formula	153
4.3. Calculation of the Index Density	157
Bibliographic Notes	165
Chapter 5. The Exponential Map and the Index Density	167
5.1. Jacobian of the Exponential Map on Principal Bundles	168
5.2. The Heat Kernel of a Principal Bundle	172
5.3. Calculus with Grassmann and Clifford Variables	178
5.4. The Index of Dirac Operators	181
Bibliographic Notes	184
Chapter 6. The Equivariant Index Theorem	185
6.1. The Equivariant Index of Dirac Operators	186
6.2. The Atiyah-Bott Fixed Point Formula	187
6.3. Asymptotic Expansion of the Equivariant Heat Kernel	191
6.4. The Local Equivariant Index Theorem	194
6.5. Geodesic Distance on a Principal Bundle	198
6.6. The heat kernel of an equivariant vector bundle	200
6.7. Proof of Proposition 6.13	204
Bibliographic Notes	206
Chapter 7. Equivariant Differential Forms	207
7.1. Equivariant Characteristic Classes	208
7.2. The Localization Formula	215
7.3. Bott's Formulas for Characteristic Numbers	224
7.4. Exact Stationary Phase Approximation	226
7.5. The Fourier Transform of Coadjoint Orbits	228
7.6. Equivariant Cohomology and Families	234
7.7. The Bott Class	241
Bibliographic Notes	246
Chapter 8. The Kirillov Formula for the Equivariant Index	248
8.1. The Kirillov Formula	249
8.2. The Weyl and Kirillov Character Formulas	253
8.3. The Heat Kernel Proof of the Kirillov Formula	258
Bibliographic Notes	267

Chapter 9. The Index Bundle	268
9.1. The Index Bundle in Finite Dimensions	270
9.2. The Index Bundle of a Family of Dirac Operators	278
9.3. The Chern Character of the Index Bundle	282
9.4. The Equivariant Index and the Index Bundle	293
9.5. The Case of Varying Dimension	295
9.6. The Zeta-Function of a Laplacian	300
9.7. The Determinant Line Bundle	304
Appendix. More on Heat Kernels	310
Bibliographic Notes	315
Chapter 10. The Family Index Theorem	317
10.1. Riemannian Fibre Bundles	320
10.2. Clifford Modules on Fibre Bundles	325
10.3. The Bismut Superconnection	332
10.4. The Family Index Density	336
10.5. The Transgression Formula	345
10.6. The Curvature of the Determinant Line Bundle	348
10.7. The Kirillov Formula and Bismut's Index Theorem	351
Bibliographic Notes	355
Bibliography	356
List of Notations	361
Index	365
