CHAPTER 1

Photochemical Hole Burning and Photooptical Properties of Doped Dye Molecules in Linear Polymers

K. Horie and S. Machida	1
1.1 Introduction	1
1.2 Photochemical Hole Burning of Dye/Polymer Systems	5
1.2.1 Hole Burning Mechanisms	5
1.2.2 High-Temperature Hole Burning and Thermal Stability of Holes	8
1.2.3 Photon-Gated Hole Burning Systems	12
1.2.4 Required Properties for PHB Materials for Practical Application	16
1.2.5 Electric-Field Readout and Holographic Detection	17
1.2.6 Single Molecule Spectroscopy	21
1.3 Photon Echo of Dye/Polymer Systems	22
1.3.1 Principle of Photon Echo	22
1.3.2 Kinds of Photon Echo Materials	25
1.4 Photoinduced Refractive Index Change and Birefringence of Dye/Polymer Systems	27
1.4.1 Photooptical Effects Induced by Photochromic Reactions	27
1.4.2 Optical Phase Conjugation Using Saturable Absorber Dyes ...	30
1.4.3 Photorefractive Effect of Photoconducting Electro-Optic Polymers	33
1.5 References	34

CHAPTER 2

Comb-Shaped Polymers with Mesogenic Side Groups as Electro- and Photooptical Active Media

V.P. Shibaev, S.G. Kostromin, and S.A. Ivanov	37
2.1 Introduction	37
2.2 Specific Features of the Molecular Structure of Functionalized Comb-Shaped Liquid-Crystalline Polymers .	38
2.3 Comb-Shaped Dye-Containing Polymers with Mesogenic Side Groups	43
2.4 Electrooptical Behavior of Liquid-Crystalline Compounds ...	58

2.4.1	Low-Molar-Mass Liquid Crystals in Electric Fields (Field Effects)	58
2.4.2	Electrooptical Effects in Comb-Shaped Liquid-Crystalline Polymers	60
2.5	Thermooptical Recording of Information on Films of Comb-Shaped Liquid-Crystalline Polymers	71
2.6	Photooptical Effects in Comb-Shaped Polymers	79
2.6.1	General Consideration	79
2.6.2	Origin of Photoinduced Optical Anisotropy	80
2.6.3	Kinetic Regularities of Photoinduced Processes	90
2.7	Summary and Outlook	106
2.8	References	107

CHAPTER 3

Cyclic Liquid-Crystalline Siloxanes as Optical Recording Materials

F.H. Kreuzer, Ch. Bräuchle, A. Miller, and A. Petri	111
3.1 Introduction	111
3.2 Cyclic Liquid-Crystalline Siloxanes	112
3.2.1 General Synthetic Aspects	112
3.2.2 Synthesis	114
3.2.2.1 Synthesis of Siloxanes	114
3.2.2.2 Connection of Mesogens to the Siloxane by Hydrosilylation . .	114
3.2.3 Synthesis of Crosslinkable Materials	115
3.3 Optical Recording with Cyclic Liquid-Crystalline Siloxanes . . .	116
3.3.1 Permanent Recording	116
3.3.1.1 Photopolymerization	116
3.3.1.2 Photobleaching	118
3.3.1.2.1 In the Presence of Benzophenone	118
3.3.1.2.2 In the Presence of Carbon Black	120
3.3.2 Reversible Recording	121
3.3.2.1 Reversible Thermal Recording	121
3.3.2.2 Recording by <i>cis-trans</i> Isomerization	121
3.3.2.2.1 Materials	122
3.3.2.2.2 Determination of Holographic Material Parameters	122
3.3.2.2.3 Writing with Polarized Light	124
3.3.2.2.4 Writing with Unpolarized Light	129
3.3.2.2.5 Erasing	133
3.3.2.2.6 Sensitivity	133
3.3.2.2.7 Resolution	134
3.3.2.3 Recording of SHG-Patterns	134
3.4 References	136

CHAPTER 4

Photoregulation of Liquid Crystal Alignment**by Photochromic Molecules and Polymeric Thin Films**

K. Ichimura	138	
4.1	Introduction	138
4.2	Alignment Regulation by Surface-Modified Silica	140
4.2.1	Surface Modification of Silica and Cell Fabrication	140
4.2.2	Factors Affecting Alignment Regulation	142
4.2.2.1	Structure of Azobenzene Derivatives	142
4.2.2.2	Photochromic Units Other than Azobenzene Derivatives	145
4.2.2.3	Surface Photochromic Reaction and Alignment Alteration	148
4.2.2.4	Properties of Photoresponsive Liquid Crystal Cells	150
4.3	Alignment Regulation by Polymer Thin Films	151
4.3.1	Surface-Modified Polymer Thin Films	151
4.3.2	Spin-Coated Polymer Thin Films	152
4.3.3	Polymeric Langmuir-Blodgett (LB) Membranes	155
4.4	Surface-Assisted Azimuthal Alignment Regulation	158
4.4.1	Photoinduced Molecular Reorientation	158
4.4.2	Polymer Thin Films Doped with Dichroic Dyes	160
4.4.3	Photocrosslinkable Polymers	161
4.4.4	Azobenzene Molecular Layers	
	Exposed to Polarized UV Light	162
4.4.5	Surface Azobenzenes Exposed to Polarized Visible Light	163
4.4.6	Spiropyran as a Command Molecule	166
4.4.7	Photochromic Polymer Layer	167
4.5	Future Aspects	169
4.6	References	170

CHAPTER 5

Electric Field Poling of Nonlinear Optical Side Chain Polymers

C.P.J.M. van der Vorst and S.J. Picken	173
5.1 Introduction: Context and Scope	173
5.2 The Electrooptical Effect in Optically Nonlinear Materials	174
5.2.1 Organic Materials	174
5.2.2 Poled Polymers	175
5.3 Theoretical Models for the Calculation of Order Parameters	177
5.3.1 General Consideration	177
5.3.2 Isotropic Model Versus Ising Model: Enhancement of Polar Order by Axial Order	179
5.3.3 Liquid-Crystalline Axial Order	180
5.3.4 Singer-Kuzyk-Sohn (SKS) Model for Mixed Rod Systems	181
5.3.5 Maier-Saupe-van der Vorst-Picken (MSVP) Model for Single Rod Systems	182
5.3.6 Influence from Dipole-Dipole Interaction	188
5.3.7 Ising Models Including Dipolar Interaction	191

5.3.8	Introduction of Pair Formation into MSVP Model	193
5.3.9	Theoretical Model of Wang (1993) Including Pair Correlation	194
5.3.10	Model of Wu (1991) to Describe Transient Phenomena	194
5.3.11	Other Models	194
5.4	Measurements of the Electrooptical Effect in Polymer Samples.	196
5.4.1	Measurements During Poling	196
5.4.2	Electro-Optic Measuring Methods	196
5.5	Comparison of Experimental Results with Theory.	198
5.5.1	General Consideration.	198
5.5.2	Dilute Liquid-Crystalline Systems.	199
5.5.3	Concentrated Isotropic Systems	200
5.5.4	Concentrated Liquid-Crystalline Systems	203
5.5.5	Other Relevant Experiments	208
5.6	Summary	208
5.7	References	209
