Introduction	V
---------------------------	---

Preface	VII
----------------------	-----

Fundamental Concepts of Ion-Beam Processing

<i>R.S. Averback, P. Bellon</i>	1
1 Introduction: Basic Mechanisms of Ion-Solid Interactions	1
1.1 Electronic Excitation	2
1.2 Nuclear Collisions	3
1.3 Thermal Spikes	5
1.4 Radiation-Enhanced Diffusion	8
1.5 Primary Recoil Spectrum	9
2 Irradiation-Induced Stresses and Surface Effects	11
2.1 Defect Accumulation	12
2.2 Collective Behavior: Irradiation-Induced Viscous Flow	13
3 Phase Transformations	15
3.1 Order-Disorder Alloys: Cu ₃ Au	15
3.2 Phase-Separating Alloys: AgCu	18
3.3 Amorphization	20
4 Phase Transformations: Effective Temperature Model	22
4.1 Phase Decomposition	23
4.2 Order-Disorder	24
4.3 Beyond the Effective Temperature Criterion	24
5 Conclusions	25
References	26

Precipitate and Microstructural Stability in Alloys Subjected to Sustained Irradiation

<i>P. Bellon</i>	29
1 Introduction	29
2 Elementary Processes in Metallic Alloys Subjected to Irradiation ..	30
3 Precipitate Evolution in Irradiated Alloys	33

3.1	Experimental Observations	33
3.2	Models with Unidirectional Ballistic Mixing	35
3.3	Models Including Full Account of Forced Mixing	38
4	Order-Disorder Transformations	43
5	Radiation-Induced Segregation and Precipitation	44
6	Defect Clustering and Related Microstructural Evolutions	45
7	Conclusion	47
	References	48

Spontaneous Patterning of Surfaces by Low-Energy Ion Beams

<i>Eric Chason, Wai Lun Chan</i>	53
1 Introduction	53
2 Varieties of Ion-Induced Pattern Formation	55
3 Competing Kinetic Mechanisms and the Linear Instability Model ..	60
3.1 BH Instability Model	60
3.2 Diffusional Roughening and the ES Instability	65
3.3 Other Regimes of Patterning – Beyond the Instability Model ..	66
References	68

Ion-Beam-Induced Amorphization and Epitaxial Crystallization of Silicon

<i>J.S. Williams, G. de M. Azevedo, H. Bernas, F. Fortuna</i>	73
1 Introduction	73
2 Overview of Ion-Beam-Induced Amorphization	76
2.1 The Effect of Temperature on Defect Accumulation	76
2.2 Preferential Amorphization at Surfaces and Defect Bands	78
2.3 Mechanisms of Amorphization: The Role of Defects	79
2.4 Layer-by-Layer Amorphization	82
3 Overview of Ion-Beam-Induced Epitaxial Crystallization:	
Experiment and Modeling	83
3.1 IBIEC Temperature Dependence	83
3.2 IBIEC Observations and Dependencies	84
3.3 Ion-Cascade Effects on IBIEC: The Role of Atomic	
Displacements and Mobile Defects	89
3.4 IBIEC Models	97
3.5 Interface Evolution	98
4 IBIEC and Silicide Precipitation	104
4.1 Precipitate Distribution	105
4.2 Phase Composition, Structure and Orientation	105
5 Conclusion	106
References	107

Voids and Nanocavities in Silicon

<i>J.S. Williams, J. Wong-Leung</i>	113
1 Introduction	113
2 Formation of Nanocavities and Voids by Ion Irradiation	115
2.1 Nanocavity Formation by H and He Irradiation	116
2.2 Irradiation-Induced Vacancy Excess and Void Formation	119
3 Interaction of Impurities with Nanocavities	121
3.1 Interactions at Low Levels of Metal Contamination	122
3.2 Interactions at High Metal Concentration Levels	125
3.3 Mechanisms for Metal Trapping and Precipitation at Cavities	128
4 Trapping and Precipitation at So-Called $R_p/2$ Defects	132
5 Stability Under Subsequent Irradiation	135
5.1 Interaction of Defects with Voids and Nanocavities	136
5.2 Preferential Amorphization	138
5.3 Shrinkage and Removal of Open-Volume Defects During Amorphization	141
6 Conclusions	143
References	143

Damage Formation and Evolution in Ion-Implanted Crystalline Si

<i>Sebania Libertino, Antonino La Magna</i>	147
1 Introduction	147
2 Point-Like Defects Formation and Evolution	154
2.1 Point Defect Properties	156
2.2 Point-Defect Generation: Electron Irradiation vs. Ion Implantation and Role of Impurities	162
2.3 Room Temperature Diffusion of Point-Like Defects	168
3 Evolution from Point to Secondary Defects	172
4 Formation and Annihilation of I Clusters and Extended Defects	181
4.1 Evolution from Secondary Defects to Interstitial Clusters	181
4.2 Interstitial Cluster Formation and Dissociation	185
4.3 Interstitial Cluster Characterization	187
4.4 Extended Defect Characterization	192
4.5 Transition from Defect Clusters to Extended Defects	194
4.6 Simulation of Defect Evolution	198
5 Conclusion	202
References	204

Point Defect Kinetics and Extended-Defect Formation during Millisecond Processing of Ion-Implanted Silicon

<i>K. Gable, K.S. Jones</i>	213
Conclusions	223
References	224

Magnetic Properties and Ion Beams: Why and How

<i>T. Devolder, H. Bernas</i>	227
1 Introduction	227
2 Magnetic Anisotropy in Ultrathin Films	228
3 Controlling Thin-Film Magnetic Anisotropy by Ion Irradiation . . .	230
3.1 The Strategy	230
3.2 Modeling Ballistic Recoil-Induced Structural Modifications . .	231
3.3 Experimental Measurements of Structural Modifications . . .	233
3.4 Experimental Variation of the Magnetic Anisotropy (Magnetic Properties)	236
3.5 Relation Between Structural and Magnetic Anisotropies . . .	237
3.6 Magnetic Reversal Properties Under Irradiation	239
3.7 A Magnetic Anisotropy Phase Diagram	243
3.8 Summary	245
4 Magnetization Reversal in Irradiation-Fabricated Nano-Structures .	246
5 Ion Beam-Induced Ordering of Intermetallic Alloys	248
6 A Word on Control of Exchange-Bias Systems via Ion Irradiation . .	250
References	250

Structure and Properties of Nanoparticles Formed by Ion Implantation

<i>A. Meldrum, R. Lopez, R.H. Magruder, L.A. Boatner, C.W. White</i> . . .	255
1 Introduction	255
2 Nanoparticle Synthesis	257
3 Microstructures	260
4 Optoelectronic Properties	263
4.1 Nonlinear Optical Materials	263
4.2 Light-Emitting Materials	267
4.3 Magnetic Materials	272
4.4 Smart Nanocomposites	276
5 Controlling Nanocrystal Size, Spacing, and Location	279
6 Conclusion	280
References	281

Metal Nanoclusters for Optical Properties

<i>Giovanni Mattei, Paolo Mazzoldi, Harry Bernas</i>	287
1 Introduction	287
2 Optical Properties of Metal Nanoclusters	288
3 Metal-Nanoparticle Synthesis by Ion Implantation	292
3.1 The Issue of Size Distribution	292
3.2 Ion Implantation for Plasmonic Nanostructures	294
3.3 Nucleation and Growth of Metal Nanoparticles	294
3.4 Linear (LO) and Nonlinear Optical (NLO) Properties	301
4 Core-Satellite for Nonlinear Optical Properties	303

5	Plasmonic Nanostructures	305
6	Conclusions	309
	References	310

Ion Beams in the Geological Sciences

<i>A. Meldrum, D.J. Cherniak</i>	317
1 Introduction	317
2 Diffusion	318
2.1 Applications	318
2.2 Experiments	322
3 Alteration Processes	325
4 Radiation Effects in Minerals	330
5 Conclusion	340
References	341

Ion-Beam Modification of Polymer Surfaces for Biological Applications

<i>G. Marletta</i>	345
1 Introduction	345
2 Surface Properties Drive Biological System Interactions	347
2.1 Role of Surface Free Energy (SFE)	348
2.2 Surface Termination	350
2.3 Electronic Structure and Electrical Properties of Surfaces	351
3 Ion Beams and Surface Properties	351
3.1 Ion-Dose-Dependent Chemistry	352
3.2 Beam-Induced Modification of Surface Properties Relevant to Biological Interactions	354
4 Biological Response of Ion-Beam Modified Polymer Surfaces	362
5 Conclusions	365
References	365
