

CONTENTS

Acknowledgements	ix
0 Introduction	1
0.1 What is noninteraction?	2
0.2 Noninteraction with stability: a two-decade history	4
0.3 Scanning the contents	6
1 Some background material from differential geometry and stability	10
2 A review of noninteracting control with stability for linear systems	16
2.1 Problem formulation	16
2.2 Noninteracting control with stability via static feedback	21
2.2.1 Invariant dynamics in noninteracting control via static feedback ...	21
2.2.2 Necessary and sufficient conditions	23
2.3 Noninteracting control with stability via dynamic feedback	24
3 Noninteracting control with local stability for nonlinear systems: basic principles	30
3.1 The class of admissible feedback laws	30
3.2 Problem formulation	36
3.3 Noninteracting control with local stability via static feedback	40
3.3.1 Invariant dynamics in noninteracting control via static feedback ...	42
3.3.2 Necessary and sufficient conditions	48
3.4 Noninteracting control with local stability via dynamic feedback	50
3.4.1 Invariant dynamics in noninteracting control via dynamic feedback .	51
3.4.2 Necessary and sufficient conditions: an intermediate result	58
3.4.3 Efficient noninteracting control with stability	81
3.4.4 Necessary and sufficient conditions	84
3.4.5 Some examples	90

4 Noninteracting control with global stability for nonlinear systems: basic principles	95
4.1 Problem formulation	95
4.2 Some facts about parallel transport of vector fields along leaves of a constant dimensional and involutive distribution	96
4.3 Noninteracting control with global stability via static feedback	99
4.4 Noninteracting control with global stability via dynamic feedback	101
4.5 Noninteracting control with stability on compact sets	114
5 Noninteracting control with local stability for nonlinear systems: the general case	117
5.1 Noninteracting control with local stability via static feedback	118
5.1.1 Regular solutions and invariant dynamics induced by a regular solution	118
5.1.2 Necessary and sufficient conditions	129
5.2 Noninteracting control with local stability via dynamic feedback	132
5.2.1 Invariant dynamics induced by a regular solution	132
5.2.2 Necessary and sufficient conditions for a class of systems	140
5.2.3 The case of block-partitioned outputs	154
6 Issues in noninteracting control via output-feedback	158
6.1 Noninteracting control via static output-feedback	161
6.2 Noninteracting control via dynamic output-feedback: examples and coun- terexamples	165
Bibliography	172
Index	179
