

Contents

	Preface	7
1.	Introduction	11
2.	Light and photo-oxidative degradation	13
2.1	Light	13
2.1.1	Photophysical processes	15
2.2	Photochemical degradation processes	16
3.	Stabilization options	18
3.1	UV-absorbent pigments	19
3.2	UV absorbers	20
3.2.1	UV absorber groups	21
3.2.2	Mode of action of UV absorbers	25
3.2.2.1	Phenolic UV absorbers	25
3.2.2.2	Non-phenolic UV absorbers	27
3.2.3	Examples of UV absorbers	28
3.3	Free-radical scavengers	32
3.3.1	Antioxidants	33
3.3.2	Sterically hindered amines	34
3.3.2.1	Mode of action of HALS	38
3.4	Quenchers	42
3.5	Peroxide decomposing agents	43
4.	Stabilization of paints	45
4.1	Automotive paints	46
4.2	Light stabilization of automotive paints	49
4.2.1	Two-coat finishes	49
4.2.2	Special demands made on UV absorbers in paints	52
4.2.2.1	Solubility and compatibility of UV absorbers	53
4.2.2.2	Volatility of UV absorbers	54
4.2.2.3	Effect of UV absorbers on paint colour	56
4.2.2.4	Unwelcome side reactions	57
4.2.2.5	UV absorbers and photoinitiators	60
4.2.3	Demands made on HALS in paints	64
4.2.3.1	Solubility and compatibility of HALS	64
4.2.3.2	Volatility of HALS	66

4.2.3.3	Effect of HALS on paint colour	66
4.2.3.4	Unwelcome side reactions	67
4.2.3.5	Effect of substitution on the piperidine nitrogen atom on the formation of nitroxyl radicals.	70
4.2.4	Weathering results for two-coat finishes.	72
4.2.4.1	Weathering tests	72
4.2.4.2	Results for solvent-based clear varnishes	78
4.2.4.3	Results for waterborne clear varnishes	91
4.2.4.4	Results for clear powder coatings.	96
4.2.4.5	Results for UV-curing clear varnishes	99
4.2.4.6	Effect of additional basecoat stabilization	106
4.2.5	Weathering results for one-coat finishes.	109
4.2.6	Stability of light stabilizers	116
4.2.6.1	Photochemical stability of UV absorbers	116
4.2.6.2	Long-term stability of HALS	122
4.3	Stabilization of industrial paints	124
4.3.1	Stabilization of paints for metal substrates.	125
4.3.2	Stabilization of clear wood varnishes	128
5.	Bibliography	132
	Index	142
