

CONTENTS

INTRODUCTION

1. Historical background.....	1
2. Poincaré algebra on the light cone	1
3. Vacuum structure on the light cone	3
4. Signature of nonperturbative effects (in LCFT).....	4
5. Chiral symmetry breaking	7
6. Gauge theories on the light-cone	10

CHAPTER I: Effective Hamiltonian and Renormalization Group (*Convenor: R. Perry*)

LECTURE 1

Renormalization of Hamiltonians

by Stanislaw D. Glazek

1. Introduction.....	17
2. Model.....	18
3. Fock space method.....	21

LECTURE 2

Spin Glasses and the Renormalization Group

by G. Parisi

1. Spin glasses.....	25
2. Gauge invariance	26
3. The replica method	28
4. Renormalization group results	31

LECTURE 3

Hamiltonian Flow in Condensed Matter Physics

by F. Wegner

1. Introduction.....	33
2. Flow equations.....	34
3. n -orbital model.....	35
4. Elimination of the electron-phonon coupling	39
5. Concluding remarks	41

CHAPTER II: Quantization of Constrained Systems (Convenor: M. Marinov)

LECTURE 4

Coherent State and Constrained Systems

by John R. Klauder

1. Introduction.....	45
2. Path integral realization	50

LECTURE 5

Unified Description and Canonical Reduction to Dirac's Observables of the Four Interactions

by L. Lusanna

1. Systems with constraints.....	53
2. Noncovariant generalized Coulomb Gauges.....	55
3. Wigner-covariant rest-frame instant form.....	56
4. Ultraviolet cutoff	59
5. Tetrad gravity.....	61

LECTURE 6

Time Evolution in General Gauge Theories

by R. Marnellius

1. Introduction.....	63
2. Standard BFV-BRST	63
3. Operator quantization on inner product spaces	65
4. Example: QED	68

CHAPTER III: Results in 3 + 1 Dimensions (Convenor: H.C. Pauli)

LECTURE 7

Developing Transport Theory to Study the Chiral Phase Transition

by S.P. Klevansky, A. Ogura, P. Rehberg and J. Hüfner

1. Introduction.....	73
2. General transport theory for fermions.....	74
3. Approximation schemes: application to the NJL model.....	75
4. Discussion.....	78

LECTURE 8**On Deriving the Effective Interaction from the QCD Lagrangian**

by H.C. Pauli

1. The structure of the Hamiltonian	81
2. The method of iterated resolvents.....	84
3. Discussion and perspectives	87

LECTURE 9**Front form QED_{3+1} : The Spin-Multiplet Structure of the Positronium Spectrum at Strong Coupling**

by U. Trittman

1. Introduction.....	89
2. Method.....	90
3. Results.....	93
4. Conclusions.....	94

LECTURE 10**Spectral Fluctuations of the QCD Dirac Operator**

by J. Verbaarschot

1. Introduction.....	97
2. The dirac spectrum.....	98
3. Spectral universality	99
4. Chiral random matrix theory.....	99
5. Lattice QCD results	100
6. Chiral random matrix theory at $\mu \neq 0$	102
7. Conclusions.....	103

CHAPTER IV: New Developments (*Convenor: S. Dalley*)**LECTURE 11**

Collinear QCD Models.....	107
----------------------------------	------------

by S. Dalley

LECTURE 12**A New Lattice Formulation of the Continuum**

by Y. Pang and H. Ren

1. Introduction.....	115
2. Spurious lattice fermion solutions	116

XIV

3. Lump functions.....	119
4. Noncompact lattice QCD.....	120

LECTURE 13

Colour-Dielectric Gauge Theory on a Transverse Lattice.....	123
---	-----

by V. Van de Sande and S. Dalley

CHAPTER V: Light Cone Quantization Under Scrutiny (Convenor: J. Zinn-Justin)

LECTURE 14

Light Front Treatment of Nuclei and Deep Inelastic Scattering

by G.A. Miller

1. Introduction.....	133
2. Discussion.....	133
3. Nuclear calculation	134
4. Nuclear plus momentum distributions	137
5. Summary and assessment	138

LECTURE 15

Light-cone string

by A. Neveu

1. Introduction.....	141
2. Light-cone strings	141

LECTURE 16

Quantum Field Theory in Singular Limits

by Moshe Moshe

1. Introduction.....	147
2. Singular limits of $O(N)$ symmetric models.....	148
3. Discussion.....	153

CHAPTER VI: Gauge Theories and Topological Issues (Convenor: Y. Frishman)

LECTURE 17

On the Transition from Confinement to Screening in Large N Gauge Theory.....

157

by J. Boorstein and V. Kutasov

LECTURE 18**More on Screening and Confinements in 2D QCD**

by J. Sonnenchein

1. Introduction.....	167
2. Review of bosonization in QCD_2	169
3. Equations of motion of QCD_2 in the presence of external currents	170
4. Solutions of the equations without external quarks	171
5. The energy-momentum tensor and the spectrum of non-abelian solution..	172
6. Solutions of the equations with external currents	172
7. Bosonized external currents.....	173
8. Large N_f expansion	175
9. Massive QCD_2	177
10. Supersymmetric Yang-Mills.....	177

LECTURE 19**Intermediate Volumes and the Role of Instantons**

by Pierre van Baal

1. Introduction.....	179
2. The role of instantons	180
3. Boundary conditions in field space.....	180
4. Gauge fields on the three-sphere.....	182
5. Conclusion	185

LECTURE 20**Renormalization in the Coulomb Gauge**

by D. Zwanziger

1. Introduction.....	187
2. Confinement and the Gribov problem	188
3. The problem of Coulomb-Gauge renormalization and its solution.....	189

LECTURE 21**Stable Knotlike Solitons**

by Antti J. Niemi

1. Introduction.....	195
2. A Hamiltonian for knots	196
3. Numerical simulations	198

CHAPTER VII: Structure Functions. Theory and Experiments (*Convenor: P. Chiappetta*)

LECTURE 22

Theoretical Uncertainties in the Determination of α_s from Hadronic Event Observables: the Impact of Nonperturbative Effects	203
by V.M. Braun	

LECTURE 23

Phenomenology of Renormalons in Inclusive Processes	209
by L. Mankiewicz	

LECTURE 24

Power Term in QCD Hard Processes and Running Coupling	
by Giuseppe Marchesini	
1. Introduction.....	213
2. Dispersive method and power corrections	214
3. Lattice calculation and power terms	216

LECTURE 25

Highlights on Deep Inelastic Scattering at HERA	
by C. Royon	
1. Introduction.....	219
2. Measurement of the proton structure function	219
3. Diffraction at Hera	221
4. High Q^2 events	223

LECTURE 26

α_s: From DIS to LEP	
by W.J. Stirling	
1. Introduction.....	225
2. α_s from LEP and SLD.....	229
3. α_s from deep inelastic scattering.....	231
4. Summary.....	235

LECTURE 27**On Small- s Resummations for the Evolution of Deep-Inelastic Structure Functions**

by J. Blümlein and A. Vogt

1. Introduction.....	237
2. Resummation of dominant terms for $X \rightarrow 0$	239
3. Conclusions.....	240

CHAPTER VIII: Phenomenological Applications*(Convenor: G. McCartor)***LECTURE 28****The Light-Cone Fock State Expansion and QCD Phenomenology**

by Stanley J. Brodsky

1. Introduction.....	245
2. Applications of light-cone methods to QCD phenomenology	248

LECTURE 29**The Analog of t'Hooft Pions with Adjoint Fermions**

by Stephen S. Pinsky

1. Introduction.....	253
2. SU(N) Yang-Mills coupled to adjoint fermions: definitions	254
3. The light-cone Hamiltonian	256
4. Exact solutions	257
5. Conclusions.....	258

LECTURE 30**Physical Coupling Schemes and QCD Exclusive Processes** 261

by David G. Robertson

CHAPTER IX: Condensates**and Chiral Symmetry Breaking** *(Convenor: S. Pinsky)***LECTURE 31****A 3+1 Dimensional LF Model with Spontaneous χ SB**

by M. Burkardt and H. El-Khozondar

1. Introduction.....	271
2. A 3+1 - dimensional toy model	272

XVIII

3. Dyson-Schwinger solution of the model.....	273
4. LF solution of the model.....	274
5. Implications for renormalization.....	275

LECTURE 32

Chiral Symmetry and Light-Cone Wave Functions

by T. Heinzl

1. Introduction.....	277
2. $D = 1+1$: 't Hooft and Schwinger model	278
3. $D = 3+1$: perspectives	281

LECTURE 33

QCD at Finite Extension.....	285
------------------------------	-----

by F. Lenz and M. Thies

LECTURE 34

Technicalities of the Zero Modes in the Light-Cone Representation

by G. McCartor

1. Introduction.....	293
2. Schwinger model	294
3. QED $3+1$	297
4. Adjoint $SU(2)$ in $1+1$	298

LECTURE 35

Zero Mode and Symmetry Breaking on the Light Front

by Koichi Yamawaki

1. Introduction.....	301
2. Zero mode problem in the continuum theory.....	302
3. Nambu-goldstone boson on the light front	304
4. The sigma model.....	306
