

Table of Contents

- 1. Introduction** 1
 - 1.1 Stochastic Analogs of Classical Differential Equations 1
 - 1.2 Filtering Problems 2
 - 1.3 Stochastic Approach to Deterministic Boundary Value Problems 2
 - 1.4 Optimal Stopping 3
 - 1.5 Stochastic Control 4
 - 1.6 Mathematical Finance 4
- 2. Some Mathematical Preliminaries** 7
 - 2.1 Probability Spaces, Random Variables and Stochastic Processes 7
 - 2.2 An Important Example: Brownian Motion 11
 - Exercises 14
- 3. Ito Integrals** 21
 - 3.1 Construction of the Ito Integral 21
 - 3.2 Some Properties of the Ito Integral 30
 - 3.3 Extensions of the Ito Integral 34
 - Exercises 37
- 4. The Ito Formula and the Martingale Representation Theorem** 43
 - 4.1 The 1-dimensional Ito Formula 43
 - 4.2 The Multi-dimensional Ito Formula 48
 - 4.3 The Martingale Representation Theorem 49
 - Exercises 54
- 5. Stochastic Differential Equations** 61
 - 5.1 Examples and Some Solution Methods 61
 - 5.2 An Existence and Uniqueness Result 66
 - 5.3 Weak and Strong Solutions 70
 - Exercises 72

6. The Filtering Problem	79
6.1 Introduction	79
6.2 The 1-Dimensional Linear Filtering Problem	81
6.3 The Multidimensional Linear Filtering Problem	100
Exercises	101
7. Diffusions: Basic Properties	107
7.1 The Markov Property	107
7.2 The Strong Markov Property	110
7.3 The Generator of an Ito Diffusion	115
7.4 The Dynkin Formula	118
7.5 The Characteristic Operator	120
Exercises	122
8. Other Topics in Diffusion Theory	131
8.1 Kolmogorov's Backward Equation. The Resolvent	131
8.2 The Feynman-Kac Formula. Killing	135
8.3 The Martingale Problem	138
8.4 When is an Ito Process a Diffusion?	140
8.5 Random Time Change	146
8.6 The Girsanov Theorem	152
Exercises	158
9. Applications to Boundary Value Problems	167
9.1 The Combined Dirichlet-Poisson Problem. Uniqueness	167
9.2 The Dirichlet Problem. Regular Points	169
9.3 The Poisson Problem	181
Exercises	188
10. Application to Optimal Stopping	195
10.1 The Time-Homogeneous Case	195
10.2 The Time-Inhomogeneous Case	207
10.3 Optimal Stopping Problems Involving an Integral	212
10.4 Connection with Variational Inequalities	214
Exercises	218
11. Application to Stochastic Control	225
11.1 Statement of the Problem	225
11.2 The Hamilton-Jacobi-Bellman Equation	227
11.3 Stochastic Control Problems with Terminal Conditions	240
Exercises	242

12. Application to Mathematical Finance	249
12.1 Market, Portfolio and Arbitrage	249
12.2 Attainability and Completeness	258
12.3 Option Pricing	266
Exercises	284
Appendix A: Normal Random Variables	289
Appendix B: Conditional Expectation	293
Appendix C: Uniform Integrability and Martingale	
Convergence	295
Appendix D: An Approximation Result	299
Solutions and Additional Hints to Some of the Exercises	303
References	311
List of Frequently Used Notation and Symbols	317
Index	321
