

Contents

1. Introduction	1
1.1 Overview of <i>CP</i> Violation Without Strangeness	1
1.2 The Neutron Electric Dipole Moment: Early History	2
1.3 Molecular Electric Dipole Moments and <i>CP</i> Violation	4
1.4 <i>T</i> -Odd Effects Without <i>CP</i> Violation	5
1.4.1 Can an Unstable Particle Have a Dipole Moment?	5
1.4.2 Spurious EDM Effect Due to Nuclear Anapole Moment	7
2. Kinematics of Discrete Symmetries	9
2.1 <i>CPT</i> Theorem: Intuitive Approach	9
2.2 <i>T</i> -Even and <i>T</i> -Odd Electromagnetic Multipole Moments	11
2.3 General Structure of Four-Fermion Operators	15
3. General Features of EDM Experiments	19
3.1 Interaction of an EDM with an Electric Field	19
3.1.1 Sensitivity Limit Due to the Uncertainty Principle	20
3.1.2 Ramsey's Method of Separated Oscillatory Fields	23
3.1.3 Linewidth and Sensitivity with Separated Oscillatory Fields	25
3.2 Ground State Optical Pumping and Detection of Atomic Polarization	25
3.2.1 Atomic Spin Magnetometers	27
3.3 Electric Fields and Coherence Times in Various Systems	31
3.3.1 Electric Fields in Vacuum	31
3.3.2 Electric Fields in Gases	33
3.3.3 Electric Fields in Liquids	33
3.3.4 Electric Fields in Solids	33
3.3.5 Coherence Times for Various Systems	34
3.4 Magnetic Field Control and Generation	35
3.4.1 Field Stability and Homogeneity Requirements	35
3.4.2 Magnetic Shields	36
3.4.3 Field Generation	40

3.5	Systematic Effects	42
3.5.1	Leakage Current Effects	43
3.5.2	Problems Related to Polarizability and Electric Quadrupole Moments	44
3.5.3	The $\mathbf{v} \times \mathbf{E}$ Problem	45
4.	The Search for the Neutron EDM	53
4.1	Properties of the Neutron	53
4.2	Interaction of Neutrons with Matter	55
4.2.1	Neutron Polarization	61
4.2.2	Production and Moderation of Neutrons	63
4.2.3	Transport of Cold Neutrons	64
4.3	Neutron Beam EDM Experiments	65
4.3.1	The Oak Ridge Experiment of 1950	65
4.3.2	The Oak Ridge Experiment of 1967	68
4.3.3	The Crystal Scattering Experiment of 1967	69
4.3.4	Pendellösung Fringes	73
4.3.5	Neutron Beam Experiments, 1968–1973	75
4.3.6	The Institut Laue-Langevin (ILL) Experiment of 1977	77
4.4	Ultracold Neutrons	77
4.4.1	Sources of Ultracold Neutrons	80
4.5	Neutron EDM Measurements with Stored Ultracold Neutrons	81
4.5.1	Present Limits for the Neutron EDM	81
4.5.2	Stored UCN EDM Experiment at the Institut Laue-Langevin	81
4.5.3	UCN EDM Experiment at the VVR-M Reactor, Petersburg Nuclear Physics Institute	88
4.5.4	The ^{199}Hg Comagnetometer UCN Experiment	91
4.6	The Future: Superfluid He Neutron EDM with a ^3He Comagnetometer	95
4.6.1	The Production of UCN in Superfluid ^4He	95
4.6.2	Superfluid ^4He Neutron EDM Search with a ^3He Comagnetometer	100
4.6.3	Dressed Spin Magnetometry	102
4.6.4	Analysis of the Dressed Spin System and Systematic Effects	104
4.7	Comparison of Experimental Techniques	105
5.	Theoretical Predictions for Neutron and Electron Dipole Moments	107
5.1	The CP -Violating θ Term in Quantum Chromodynamics	108
5.2	Predictions of the Standard Model for Dipole Moments	111

5.3	Spontaneous CP Violation in the Higgs Sector	112
5.4	Phenomenological Approach	116
6.	EDM Experiments	
	with Paramagnetic Atoms	119
6.1	The Shielding Problem	119
6.2	Enhancement of the Electron EDM in Paramagnetic Atoms	121
6.3	Overview of Paramagnetic Atom Experiments	122
6.4	The Cs EDM Experiment	124
6.5	The Tl EDM Experiment	126
6.6	Future Prospects for Improving the Electron EDM Limit	133
6.7	EDM Limits of Some Other Elementary Particles	135
6.7.1	The Proton	135
6.7.2	The Neutrino	135
6.7.3	The Muon	135
6.7.4	The Λ^0 Hyperon	136
6.7.5	The τ Lepton	136
7.	EDM Experiments with Diamagnetic Atoms	137
7.1	Shielding in the 1S_0 System	137
7.2	The ^{129}Xe EDM Experiment	139
7.3	The ^{199}Hg EDM Experiment	142
7.4	$^3\text{He} - ^{129}\text{Xe}$ Comparison	147
8.	Atomic Calculations	149
8.1	Wave Function of an Outer Electron at Short Distances	149
8.2	The Electron EDM in Paramagnetic Heavy Atoms	152
8.3	CP -Odd Electron–Nucleon Interaction	155
8.3.1	CP -Odd Mixing of Atomic Levels	156
8.3.2	Paramagnetic Atoms	157
8.3.3	Diamagnetic Atoms	159
8.3.4	Summary of the Constants $k_{1,2,3}$	162
8.4	Electron EDM in Diamagnetic Atoms	164
8.5	CP -Odd Nuclear Moments	167
8.5.1	The Schiff Moment	167
8.5.2	Magnetic Quadrupole Moment	172
9.	T Violation in Molecules	177
9.1	Enhancement of an Applied Field by a Polar Molecule	177
9.2	TlF Beam Experiments	179
9.3	What Have We Learned from the TlF Experiment?	183

9.4	Paramagnetic Molecules	185
9.5	What Will Be Gained from Experiments with Paramagnetic Molecules?	186
10.	<i>CP</i>-Odd Nuclear Forces	189
10.1	<i>CP</i> -Odd Mixing of Opposite-Parity Nuclear Levels	189
10.2	Nuclear Moments Induced by <i>T</i> - and <i>P</i> -Odd Potentials	192
10.3	Enhancement Mechanisms for <i>T</i> - and <i>P</i> -Odd Nuclear Multi- poles	195
10.4	Theoretical Predictions and Implications	198
11.	What Do We Really Know About <i>T</i>-Odd, but <i>P</i>-Even Interactions?	203
11.1	Long-Range Effects	203
11.2	TOPE Fermion–Fermion Interactions. One-Loop Approach	205
11.3	TOPE Fermion–Fermion Interactions. Two-Loop Approach	207
11.4	Conclusions on TOPE <i>eN</i> and <i>NN</i> Interactions	211
11.5	<i>T</i> -Odd β Decay Constants	213
