Preface to the Second Edition	vii
Foreword to the First Edition	ix
From the Introduction to the First Edition	xi
Acknowledgements	xv
 I Bernhard Riemann	 1
Chapter 1 Beginnings	3
Chapter 2 Doctoral Dissertation	11
Chapter 3 <i>Privatdozent</i> at Göttingen	23
Chapter 4 Riemann and Dirichlet	43
Chapter 5 Full Professor in Göttingen	63
Chapter 6 Last Years	75
Chapter 7 Posthumous Fate	77
 Bibliography to Part I	 83
 II Topological Themes in Contemporary Physics	 85
Chapter 8 Introduction	89
Chapter 9 Topological Structures	95
Chapter 10 The Connectivity of a Manifold and Quantization of Magnetic Flux	107
Chapter 11 Systems with Spontaneous Symmetry Breaking	109
Chapter 12 Topology and Liquid Crystals	113
Chapter 13 Theory of Gauge Fields	127
Chapter 14 Topological Particles	145
14.1 Instantons, or Pseudo-Particles	149

Chapter 15	Soliton Particles	157
Chapter 16	Knots, Links, and Physics	167
	16.1 Von Neumann Algebras	168
	16.1.1 The Dimension of a Factor	169
	16.2 The Theory of Braids	171
	16.2.1 The Group of Braids	172
	16.2.2 The Skein Relations	174
	16.3 Condensed Matter Theory	176
	16.3.1 Example 1	177
	16.3.2 Example 2	179
	16.3.3 Magnetohydrodynamics	179
Chapter 17	What Next?	183
	17.1 The Quantum Hall Effect	184
	17.2 Quasicrystals	185
	17.3 Membranes	188
Chapter 18	A Brief Historical Survey	191
	Bibliography to Part II	195
	Index	199
