

Table of Contents

A Policy Model for Secure Information Flow	1
<i>Adedayo O. Adetoye and Atta Badii</i>	
A General Framework for Nondeterministic, Probabilistic, and Stochastic Noninterference	18
<i>Alessandro Aldini and Marco Bernardo</i>	
Validating Security Protocols under the General Attacker	34
<i>Wihem Arsaç, Giampaolo Bella, Xavier Chantry, and Luca Compagna</i>	
Usage Automata	52
<i>Massimo Bartoletti</i>	
Static Detection of Logic Flaws in Service-Oriented Applications	70
<i>Chiara Bodei, Linda Brodo, and Roberto Bruni</i>	
Improving the Semantics of Imperfect Security	88
<i>Niklas Broberg and David Sands</i>	
Analysing PKCS#11 Key Management APIs with Unbounded Fresh Data	92
<i>Sibylle Fröschle and Graham Steel</i>	
Transformations between Cryptographic Protocols	107
<i>Joshua D. Guttman</i>	
Formal Validation of OFEPSP+ with AVISPA	124
<i>Jorge L. Hernandez-Ardieta, Ana I. Gonzalez-Tablas, and Benjamin Ramos</i>	
On the Automated Correction of Protocols with Improper Message Encoding	138
<i>Dieter Hutter and Raúl Monroy</i>	
Finite Models in FOL-Based Crypto-Protocol Verification	155
<i>Jan Jürjens and Tjark Weber</i>	
Towards a Type System for Security APIs	173
<i>Gavin Keighren, David Aspinall, and Graham Steel</i>	
Separating Trace Mapping and Reactive Simulatability Soundness: The Case of Adaptive Corruption	193
<i>Laurent Mazaré and Bogdan Warinschi</i>	

How Many Election Officials Does It Take to Change an Election?	211
<i>P.Y.A. Ryan</i>	

Author Index	223
