Contents

I Introduction: The "Internationalization" of Mathematics and the Interests Therein of Scientists and Philanthropists 1

1. The Notion of Internationalization as Used in this Book and the Unity of the International and National Dimensions of Science and Mathematics 2
2. The Political and Ideological Dimension of "Internationalization" and Tentative Remarks About the More General Notion of "Modernization" 7
3. "Patriotic Political Posturing" of German Scientists After World War I and the Exemplary Degree of Internationalization of German Science: An Example for Possible Conflicts Between Scientific and Political Interests 13
4. American Philanthropic Foundations and Their Interest in International Science and Mathematics Between the Two World Wars 16
5. The Intersection Between the Interests of Mathematicians and of the Foundations, and the Main Goals of this Book 20

II The Political and Economic Conditions for International Scientific Collaboration After World War I and the Situation in Mathematics .. 27

1. Wickliffe Rose, the Beginnings of the INTERNATIONAL EDUCATION BOARD and the Central Role of the Fellowship Program 27
2. Rose's Trip to Europe (1923/24) and the Political and Economic Conditions for International Scientific Collaboration (Especially "Migrations") After World War I 30
3. Rose's Trip to Europe, the Place of Physics and Mathematics in His Plan and the Peculiar Situation of German Mathematics 35
4. Emergency Help Following Rose's Trip to Europe: Support for Mathematical Publications and the Exceptional Founding of a New Journal: The *Journal of the London Mathematical Society* 38
5. International Comparisons in Mathematics on the Eve of Birkhoff's Trip to Europe 42

Bibliografische Informationen
http://d-nb.info/960708456

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

6. Birkhoff as the Leading American Mathematician, His Trip to Europe in 1926, and His Conclusions on the Problem of Mathematical Communication 46
7. Changed Assessments Following Birkhoff's Trip to Europe of the Relative Standing of International Mathematical Centres 50
8. Summary and Conclusions 55

III General Ideological and Political Positions Underlying the IEB's Activities 57
1. Augustus Trowbridge's Appointment as Head of the IEB Office in Paris (1925) 57
2. The Relation Between "Saving" and "Developing" Scientific Cultures, and Between "Advanced" and "Backward" Countries 61
3. Anti-Semitism as an Example for Political Resentments 63
4. The "Excellence" and "Best Science" Policy of the IEB and Its Inherent Conflict With Support for "Backward Countries". First Examples from the IEB Fellowship Program for Mathematicians 65
5. Limits for the Transfer to Europe of the American (Sociological) Ideal of Cooperative Work in the Sciences 70
6. Further American Ideals and Requirements of Communication (Decentralization, Oral Communication, Matching Funds, Large-Scale Grants) 71
7. Summary and Conclusions 74

IV The Practice of the Fellowship Programs of IEB (1923–1928) and RF (After 1928), and the Particular Situation of Mathematics 77
Preliminary Remarks 77
1. Criteria for the Selection of Fellows, Problems of Meeting the Criteria, and Exceptions Made 79
2. Details and Examples 81
3. The Restricted Power of the Advisors: Counselling, Tactics, and Dependence on the Philanthropists' Values 92
4. The Fellowship List, Some Related Statistics and First Conclusions, Especially With Respect to the Rise of American Mathematics 96
5. Reflections on and Impressions of the Cognitive Dimension of the Fellowship Programs 106
6. Selected Social Problems of (Scientific) Mathematical Communication in the 1920s and 1930s, Particularly in France, as Revealed in the Sources on Fellowships 119

7. The Rise of Soviet-Russian Mathematics and Problems of Response on the Part of Rockefeller Philanthropy: Especially Besicovitch, Lusin, and Kolmogorov 125
8. The Dominance of National (American) Interests in the IEB/RF Policies 133
9. Excursus: The Guggenheim Fellowship Program Since 1926 138
10. Summary and Conclusions 139

V **The Institute Projects in Europe 1926–1928: Göttingen, Paris, a Project Turned Down in Djursholm, and an Excursus on the Institute for Advanced Study in Princeton** 143
Introduction 143
1. The IEB Erects a New Mathematics Institute in Göttingen 144
1.1. Trowbridge's Visit to Göttingen in October 1925 145
1.2. The Visit of Trowbridge and Birkhoff to Göttingen (July 1926) .. 148
1.3. The Fate of the Institute and Its Director Courant Under Nazi Rule 155
2. The Foundation of the Institut Henri Poincaré in Paris 156
2.1 The Beginnings of the Institute, the Initial Role of Mathematical Physics, and the Gradual Realization of Trowbridge's Memo of May 1926 157
2.2. Introducing the Name 'Henri Poincaré' and Opening the Institute in November 1928 161
2.3. The INSTITUT HENRI POINCARÉ as an Element of Further Institutional Development in French Mathematics 166
2.4. The INSTITUT HENRI POINCARÉ Discloses its "International Potentialities" and Adds to the Cognitive Dimension in French Mathematics: The Role of Stochastics and the International Lecture Program in the 1930s 169
2.5. The INSTITUT HENRI POINCARÉ Released From Rockefeller Influence and Protection Until the Early Post-War Years 176
3. The Mathematical Institute in Djursholm (Sweden): A Case of Rockefeller Help Refused 178
4. Excursus: The Foundation of the School of Mathematics of the Institute for Advanced Study (Princeton) Around 1932 and Its Relation to the Rockefeller Projects 180
5. Summary and Conclusions 184

VI The Emergency Program of the RF After 1933 and Changing Attitudes of the RF Vis-À-Vis Mathematics Before the War: Mathematics Caught Between New Scientific Orientations and Catastrophic Political Developments 187

Introduction: The Peculiar Situation in Mathematics, Especially the Role of Warren Weaver 187

1. The Seizure of Power by the Nazis in Germany, Consequences for Mathematics, Reactions by Rockefeller Philanthropy, and the Impact on the Regular Program in Europe 190
2. The Rockefeller Emergency Programs and Mathematics 192
3. Support for Interdisciplinary Research and Bordering Subjects of Mathematics and Taking "Responsibility" for General European Values 206
4. Summary and Conclusions 214

VII Epilogue 217

Notes 221

Appendices 245

1. Proposal by the Physicists of Göttingen for Support From the IEB 1924 245
2. A Memo by English Mathematician G.H.Hardy Asking for Support for a New Journal 1924 247
3. Nikolaj Lusin's Application for a IEB Fellowship, March 27, 1926 ... 250
4. Paul Montel (1944) on the Origin of Plans for the Institut Henri Poincaré in May 1926 251
5. A Memorandum by Augustus Trowbridge (IEB) on a Meeting With Émile Borel Concerning Plans for the Foundation of an Institute for Mathematics and Mathematical Physics in Paris (May 1926) 253
6. Report by A. Trowbridge on His trip to Göttingen July 2 Through July 4, 1926 256
7. G.D. Birkhoff's Report to the IEB of September 1926 Concerning His Trip to Europe 265
8. Richard Courant's Assessment of American Mathematics as of 1927 272
9. IEB-Fellow Heinz Hopf 1928 on the Exemplary Sports Facilities at American Universities 275

10. David Hilbert's Request (1933) to his Former American Doctoral Student Mason, then President of the Rockefeller Foundation, in Favour of Dismissed Richard Courant (July 1933) 276
11. Richard Courant (1933) on Support by Rockefeller Philanthropy for the Erection of the Mathematical Institute in Göttingen 1926–1929 ... 277
12. Correspondence Between Birkhoff, Borel, and Weaver (1937/38) on the Future Role of the Institut Henri Poincaré (Paris) 279
13. Hermann Weyl (1941) of Princeton to the Rockefeller-Sponsored New School for Social Research About Chances to Save the "Bourbaki Enterprise" 284
14. Richard Courant's Letter (1944) to the Office of War Information on the Rockefeller Contribution to Science and Mathematics 286
15. List of IEB/RF Fellows in Mathematics Until 1945 288
16. Guggenheim Fellows in Mathematics: Chronological List Until 1945 (Possibly Incomplete) 302
17. Dismissed Mathematicians From Europe Who Were Supported by the RF Emergency Fund 304
