

Contents

1 Preliminaries	1
1.1 Introduction	1
1.2 What is a vector bundle?	4
1.3 What is a connection?	9
1.4 The curvature of a connection	16
1.5 Characteristic classes	19
1.6 The Thom form	24
1.7 The universal bundle	27
1.8 Classification of connections	34
1.9 Hodge theory	40
2 Spin geometry on four-manifolds	45
2.1 Euclidean geometry and the spin groups	45
2.2 What is a spin structure?	49
2.3 Almost complex and spin^c structures	53
2.4 Clifford algebras	54
2.5 The spin connection	58
2.6 The Dirac operator	63
2.7 The Atiyah-Singer Index Theorem	67
3 Global analysis of the Seiberg-Witten equations	73
3.1 The Seiberg-Witten equations	73
3.2 The moduli space	75
3.3 Compactness of the moduli space	79
3.4 Transversality	82
3.5 The intersection form	91
3.6 Donaldson's Theorem	97
3.7 Seiberg-Witten invariants	98
3.8 Dirac operators on Kähler surfaces	101
3.9 Invariants of Kähler surfaces	110

Bibliography	117
Index	120
