Contents

1 Introduction 1

2 Preliminaries on convex analysis and vector optimization .. 9
2.1 Convex sets 9
2.1.1 Algebraic properties of convex sets 9
2.1.2 Topological properties of convex sets 14
2.2 Convex functions 19
2.2.1 Algebraic properties of convex functions 19
2.2.2 Topological properties of convex functions 25
2.3 Conjugate functions and subdifferentiability 30
2.3.1 Conjugate functions 30
2.3.2 Subdifferentiability 38
2.4 Minimal and maximal elements of sets 42
2.4.1 Minimality 42
2.4.2 Weak minimality 45
2.4.3 Proper minimality 46
2.4.4 Linear scalarization 54
2.5 Vector optimization problems 57

3 Conjugate duality in scalar optimization 63
3.1 Perturbation theory and dual problems 63
3.1.1 The general scalar optimization problem 63
3.1.2 Optimization problems having the composition with a linear continuous mapping in the objective function 66
3.1.3 Optimization problems with geometric and cone constraints 68
3.2 Regularity conditions and strong duality 73
3.2.1 Regularity conditions for the general scalar optimization problem 73

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

3.2.2 Regularity conditions for problems having the composition with a linear continuous mapping in the objective function 76
3.2.3 Regularity conditions for problems with geometric and cone constraints 80
3.3 Optimality conditions and saddle points 86
3.3.1 The general scalar optimization problem 86
3.3.2 Problems having the composition with a linear continuous mapping in the objective function 89
3.3.3 Problems with geometric and cone constraints 95
3.4 The composed convex optimization problem 100
3.4.1 A first dual problem to (P^{CC}) 100
3.4.2 A second dual problem to (P^{CC}) 105
3.5 Stable strong duality and formulae for conjugate functions and subdifferentials 109
3.5.1 Stable strong duality for the general scalar optimization problem 110
3.5.2 The composed convex optimization problem 111
3.5.3 Problems having the composition with a linear continuous mapping in the objective function 114
3.5.4 Problems with geometric and cone constraints 117

4 Conjugate vector duality via scalarization 123
4.1 Fenchel type vector duality 123
4.1.1 Duality with respect to properly efficient solutions 123
4.1.2 Duality with respect to weakly efficient solutions 130
4.2 Constrained vector optimization: a geometric approach 132
4.2.1 Duality with respect to properly efficient solutions 132
4.2.2 Duality with respect to weakly efficient solutions 137
4.3 Constrained vector optimization: a linear scalarization approach 139
4.3.1 A general approach for constructing a vector dual problem via linear scalarization 140
4.3.2 Vector dual problems to (PV^C) as particular instances of the general approach 144
4.3.3 The relations between the dual vector problems to (PV^C) 148
4.3.4 Duality with respect to weakly efficient solutions 153
4.4 Vector duality via a general scalarization 159
4.4.1 A general duality scheme with respect to a general scalarization 160
4.4.2 Linear scalarization 165
4.4.3 Maximum(-linear) scalarization 166
4.4.4 Set scalarization 168
4.4.5 (Semi)Norm scalarization 170
4.5 Linear vector duality 173

4.5.1 The duals introduced via linear scalarization 173
4.5.2 Linear vector duality with respect to weakly efficient solutions 176
4.5.3 Nakayama's geometric dual in the linear case 178

5 Conjugate duality for vector optimization problems with finite dimensional image spaces 181
5.1 Another Fenchel type vector dual problem 181
5.1.1 Duality with respect to properly efficient solutions 182
5.1.2 Comparisons to (DV^A) and (DV^A_{BK}) 192
5.1.3 Duality with respect to weakly efficient solutions 194
5.2 A family of Fenchel-Lagrange type vector duals 198
5.2.1 Duality with respect to properly efficient solutions 199
5.2.2 Duality with respect to weakly efficient solutions 209
5.2.3 Duality for linearly constrained vector optimization problems 212
5.3 Comparisons between different duals to (PVF^C) 218
5.4 Linear vector duality for problems with finite dimensional image spaces 227
5.4.1 Duality with respect to properly efficient solutions 227
5.4.2 Duality with respect to weakly efficient solutions 232
5.5 Classical linear vector duality in finite dimensional spaces 235
5.5.1 Duality with respect to efficient solutions 235
5.5.2 Duality with respect to weakly efficient solutions 244

6 Wolfe and Mond-Weir duality concepts 249
6.1 Classical scalar Wolfe and Mond-Weir duality 249
6.1.1 Scalar Wolfe and Mond-Weir duality: nondifferentiable case 249
6.1.2 Scalar Wolfe and Mond-Weir duality: differentiable case 251
6.1.3 Scalar Wolfe and Mond-Weir duality under generalized convexity hypotheses 254
6.2 Classical vector Wolfe and Mond-Weir duality 260
6.2.1 Vector Wolfe and Mond-Weir duality: nondifferentiable case 261
6.2.2 Vector Wolfe and Mond-Weir duality: differentiable case 264
6.2.3 Vector Wolfe and Mond-Weir duality with respect to weakly efficient solutions 269
6.3 Other Wolfe and Mond-Weir type duals and special cases 275
6.3.1 Scalar Wolfe and Mond-Weir duality without regularity conditions 276
6.3.2 Vector Wolfe and Mond-Weir duality without regularity conditions 280
6.3.3 Scalar Wolfe and Mond-Weir symmetric duality 283
6.3.4 Vector Wolfe and Mond-Weir symmetric duality 285

6.4 Wolfe and Mond-Weir fractional duality 290
6.4.1 Wolfe and Mond-Weir duality in scalar fractional programming 290
6.4.2 Wolfe and Mond-Weir duality in vector fractional programming 294
6.5 Generalized Wolfe and Mond-Weir duality: a perturbation approach 302
6.5.1 Wolfe type and Mond-Weir type duals for general scalar optimization problems 302
6.5.2 Wolfe type and Mond-Weir type duals for different scalar optimization problems 303
6.5.3 Wolfe type and Mond-Weir type duals for general vector optimization problems 306

7 Duality for set-valued optimization problems based on vector conjugacy 311
7.1 Conjugate duality based on efficient solutions 311
7.1.1 Conjugate maps and the subdifferential of set-valued maps 311
7.1.2 The perturbation approach for conjugate duality 319
7.1.3 A special approach - vector k-conjugacy and duality 330
7.2 The set-valued optimization problem with constraints 334
7.2.1 Duality based on general vector conjugacy 335
7.2.2 Duality based on vector k-conjugacy 342
7.2.3 Stability criteria 346
7.3 The set-valued optimization problem having the composition with a linear continuous mapping in the objective function 352
7.3.1 Fenchel set-valued duality 352
7.3.2 Set-valued gap maps for vector variational inequalities 356
7.4 Conjugate duality based on weakly efficient solutions 360
7.4.1 Basic notions, conjugate maps and subdifferentiability 360
7.4.2 The perturbation approach 366
7.5 Some particular instances of $(PSVG_w)$ 372
7.5.1 The set-valued optimization problem with constraints 372
7.5.2 The set-valued optimization problem having the composition with a linear continuous mapping in the objective map 377
7.5.3 Set-valued gap maps for set-valued equilibrium problems 379
