

Table of Contents

1. Introduction	15
1.1 Why write another book about image processing?	15
1.2 Possibilities and limitations	17
1.3 Types of inspection tasks	19
1.4 Structure of image processing systems	20
1.4.1 Hardware setup	20
1.4.2 Signal flow in the process environment	23
1.4.3 Signal flow within an image processing system	26
1.5 Solution approach	27
1.6 Introductory example	29
1.6.1 Character recognition	30
1.6.2 Thread depth	33
1.6.3 Presence verification	35
1.7 From here	36
2. Overview: Image Preprocessing	39
2.1 Gray scale transformations	40
2.1.1 Look-up tables	40
2.1.2 Linear gray level scaling	42
2.1.3 Contrast enhancement	43
2.1.4 Histogram equalization	44
2.1.5 Local contrast enhancement	45
2.2 Image arithmetic	47
2.2.1 Image addition and averaging	47
2.2.2 Image subtraction	48
2.2.3 Minimum and maximum of two images	50
2.2.4 Shading correction	51
2.3 Linear filters	52
2.3.1 Local operations and neighborhoods	52
2.3.2 Principle of linear filters	53
2.3.3 Smoothing filter	56
2.3.4 Edge filters	61
2.4 Median filter	66
2.5 Morphological filters	67

2.6	Other non-linear filters	70
2.7	Global operations	71
2.8	Key terms	72
3.	Positioning	75
3.1	Position of an individual object	75
3.1.1	Positioning using the entire object	76
3.1.2	Positioning using an edge	78
3.2	Orientation of an individual object	81
3.2.1	Orientation computation using principal axis	81
3.2.2	Distance-versus-angle signature	84
3.3	Robot positioning	86
3.3.1	Setting of tasks	86
3.3.2	Image processing components	87
3.3.3	Position determination on one object	88
3.3.4	Orientation of an object configuration	89
3.3.5	Comments concerning position adjustment	90
3.4	Key terms	92
4.	Overview: Segmentation	95
4.1	Regions of interest	95
4.1.1	Regions and objects	95
4.2	Thresholding	96
4.2.1	Thresholds	97
4.2.2	Threshold determination from histogram analysis	98
4.2.3	Gray level histograms	99
4.2.4	Generalizations of thresholding	102
4.3	Contour tracing	104
4.3.1	Pixel connectedness	104
4.3.2	Generating object contours	106
4.3.3	Contour representation	107
4.4	Edge based methods	108
4.4.1	Edge probing in industrial image scenes	108
4.4.2	Edge detection with subpixel accuracy	109
4.5	Template matching	111
4.5.1	Basic operation	112
4.5.2	Optimizing template matching	115
4.5.3	Comments on template matching	119
4.6	Key terms	120
5.	Mark Identification	125
5.1	Bar code identification	125
5.1.1	Principle of gray-level-based bar code identification ...	126
5.1.2	Bar code symbologies	127
5.1.3	Examples of industrial bar code identification	129

5.1.4	Further information	132
5.2	Character recognition	132
5.2.1	Laser-etched characters on an IC	132
5.2.2	Basic configuration of the character recognition	133
5.2.3	Fundamental structure of a classifier application	136
5.2.4	Position adjustment on the IC	141
5.2.5	Improving character quality	145
5.2.6	Optimization in operation	148
5.3	Recognition of pin-marked digits on metal	149
5.3.1	Illumination	149
5.3.2	Preprocessing	150
5.3.3	Segmentation and classification	150
5.4	Block codes on rolls of film	152
5.5	Print quality inspection	156
5.5.1	Procedure	158
5.5.2	Print quality inspection in individual regions	159
5.5.3	Print quality inspection with automatic subdivision ...	160
5.6	Key terms	161
6.	Overview: Classification	165
6.1	What is classification?	165
6.2	Classification as function approximation	167
6.2.1	Machine learning	167
6.2.2	Statistical foundations	169
6.2.3	Constructing classifiers	170
6.3	Instance-based classifiers	172
6.3.1	Nearest neighbor classifier	172
6.3.2	RCE networks	174
6.3.3	Radial basis functions	175
6.3.4	Vector quantization	176
6.3.5	Template matching	177
6.3.6	Remarks on instance-based classifiers	177
6.4	Function-based classifiers	178
6.4.1	Polynomial classifier	178
6.4.2	Multilayer perceptron-type neural networks	179
6.4.3	Representation of other classifiers as neural networks .	182
6.5	Remarks on the application of neural networks	183
6.5.1	Composition of the training set	183
6.5.2	Feature scaling	183
6.5.3	Rejection	184
6.5.4	Arbitrariness	185
6.6	Key terms	186

7. Dimensional Checking	191
7.1 Gauging tasks	191
7.2 Simple gauging	192
7.2.1 Center point distance	193
7.2.2 Contour distances	196
7.2.3 Angle measurements	200
7.3 Shape checking on a punched part	201
7.3.1 Inspection task	201
7.3.2 Modeling contours by lines	202
7.3.3 Measuring the contour angle	205
7.4 Angle gauging on toothed belt	205
7.4.1 Illumination setup	206
7.4.2 Edge creation	208
7.5 Shape checking on injection-molded part	209
7.5.1 Computing radii	209
7.5.2 Remarks on model circle computation	211
7.6 High accuracy gauging on thread flange	213
7.6.1 Illumination and image capture	213
7.6.2 Subpixel-accurate gauging of the thread depth	214
7.7 Calibration	215
7.7.1 Calibration mode	217
7.7.2 Inspection-related calibration	217
7.8 Key terms	218
8. Overview: Image Acquisition and Illumination	221
8.1 Solid-state sensors	221
8.1.1 CCD sensor operation	222
8.1.2 Properties of CCD sensors	224
8.1.3 Image degradation	226
8.2 Standard video cameras	228
8.2.1 Basic structure	228
8.2.2 The video standard	230
8.2.3 Sampling of the line signal	232
8.2.4 Extensions of the video standard	235
8.2.5 Image quality	236
8.3 Other camera types	238
8.3.1 Progressive scan cameras	238
8.3.2 Asynchronous cameras	238
8.3.3 Digital cameras	239
8.3.4 Line-scan cameras	240
8.3.5 Additional camera properties	242
8.4 Transmission to the computer	243
8.4.1 Basic operation of a frame grabber	244
8.4.2 Frame grabbers for standard video cameras	246
8.4.3 Frame grabbers for other camera types	246

8.4.4	Direct digital transmission	248
8.5	Optical foundations	249
8.5.1	F-number	249
8.5.2	Thin lens imaging equation	251
8.5.3	Depth of field	255
8.5.4	Typical imaging situations	259
8.5.5	Aberrations	260
8.5.6	Lens selection	262
8.5.7	Special optical devices	264
8.6	Illumination technology	265
8.6.1	Light sources	266
8.6.2	Front lighting	267
8.6.3	Back Lighting	270
8.7	Key terms	272
9.	Presence Verification	279
9.1	Simple presence verification	279
9.1.1	Part geometry	280
9.1.2	Illumination	281
9.1.3	Position adjustment	282
9.1.4	Segmentation	284
9.1.5	Evaluation	285
9.1.6	Segmentation with template matching	286
9.2	Simple gauging for assembly verification	288
9.2.1	Illumination	288
9.2.2	Inspection criteria	289
9.2.3	Object creation and measurement computation	291
9.2.4	Position adjustment	292
9.3	Presence verification using classifiers	293
9.3.1	Illumination	293
9.3.2	Inspection of the caulking	297
9.3.3	Type verification of the flange	302
9.4	Contrast-free presence verification	306
9.5	Key terms	308
10.	Overview: Object Features	311
10.1	Basic geometrical features	311
10.1.1	Enclosing rectangle	311
10.1.2	Area and perimeter	312
10.1.3	Center of gravity	315
10.1.4	Axes and radii	316
10.2	Shape-descriptors	317
10.2.1	Curvature	317
10.2.2	Fiber features	320
10.2.3	Euler's number	321

10.2.4 Moments and Fourier descriptors	321
10.3 Gray level features	322
10.3.1 First-order statistics	322
10.3.2 Texture features	323
10.4 Key terms	324
11. Outlook: Visual Inspection Projects	327
A. Mathematical Notes	331
A.1 Backpropagation training	331
A.1.1 Neural networks – concept and history	331
A.1.2 Fundamentals	332
A.1.3 Backpropagation	333
A.2 Computation of the depth of field	336
A.2.1 Limit distances	336
A.2.2 Depth of field at infinite distance	339
A.2.3 Dependence of the depth of field on the focal length ..	340
B. The Companion CD	343
