## 1 Introduction to Neutron Techniques

<i>Götz Eckold and Helmut Schober</i> .....	1
1.1 Why Neutrons? .....	1
1.2 Neutron Sources .....	3
1.3 Techniques .....	5
1.3.1 Three Axis Spectrometers .....	6
1.3.2 Backscattering Spectrometers .....	7
1.3.3 Time-of-Flight Spectrometers .....	9
1.3.4 Fixed Wavelength Diffractometers .....	11
1.3.5 Time-of-Flight Diffractometers .....	12
1.3.6 SANS Instruments .....	12
1.3.7 Reflectometers .....	14
1.3.8 Spin-Echo Spectrometers .....	15
1.4 ... and What About Kinetics? .....	17
References .....	17

## 2 Studying the Hydration of Cement Systems in Real-time Using Quasielastic and Inelastic Neutron Scattering

<i>Vanessa K. Peterson</i> .....	19
2.1 Cement Research .....	19
2.1.1 Constituents and Hydration .....	20
2.1.2 Hydration Kinetics .....	21
2.1.3 Research Tools .....	22
2.2 Studying Hydrating Cement Using Quasielastic and Inelastic Neutron Scattering .....	23
2.2.1 Quasielastic Neutron Scattering of Hydrogen in Cement Systems .....	26
2.2.2 Models for QENS Data .....	26
2.2.3 Inelastic Neutron Scattering of Hydrogen in Cement Systems .....	40
2.2.4 Summary of QENS and INS methods .....	46

2.3 Time-Resolved Quasielastic and Inelastic Neutron Scattering.....	47
2.3.1 Time-evolution of Descriptive Parameters Derived from Quasielastic and Inelastic Neutron Scattering Data.....	47
2.3.2 Kinetic Models .....	57
2.3.3 The Kinetics of Cementitious Hydration using Quasi and Inelastic Neutron Scattering: Case Studies .....	65
2.4 Conclusions and Outlook .....	73
References .....	74

### 3 Kinetic Properties of Transformations Between Different Amorphous Ice Structures

*Michael Marek Koza, Thomas Hansen, Roland P. May,*

<i>Helmut Schober</i> .....	77
3.1 Introduction .....	78
3.2 Experimental .....	81
3.2.1 Sample Preparation and Experimental Procedure .....	81
3.2.2 Data Treatment .....	83
3.3 Results.....	83
3.3.1 Wide Angle Diffraction .....	83
3.3.2 Small Angle Signal .....	86
3.4 Discussion .....	89
3.5 Conclusions.....	96
References .....	97

### 4 Structure Evolution in Materials Studied by Time-Dependent Neutron Scattering

<i>N.H. van Dijk</i> .....	101
4.1 Introduction .....	101
4.2 Kinetics of Phase Transformations .....	102
4.3 Time-Resolved Neutron Scattering Techniques .....	103
4.3.1 Characteristics Neutron Scattering Techniques and Measurement Strategies .....	103
4.3.2 Comparison Neutron and Synchrotron Studies .....	105
4.4 Neutron and X-ray Studies During Solidification of Aluminium Alloys .....	106
4.4.1 Time Resolved Neutron Scattering Experiments .....	106
4.4.2 Time Resolved X-ray Scattering Experiments.....	109
4.5 3D Neutron Depolarization Studies .....	111
4.5.1 Time-Resolved Magnetic Domain Wall Movement .....	112
4.5.2 Time-Resolved Phase Transformation Kinetics in Steels.....	114
4.6 Spin-Echo Small-Angle Neutron Scattering .....	117
4.7 Conclusions and Prospects.....	120
References .....	121

## 5 Applications of In Situ Neutron Diffraction to Optimisation of Novel Materials Synthesis

<i>D.P. Riley, E.H. Kisi, E. Wu, T. Hansen, P. Henry</i> .....	123
5.1 Brief Review of In Situ Diffraction and MAX Phase Synthesis.....	124
5.1.1 Introduction to In Situ Diffraction .....	124
5.1.2 Review of MAX Phases.....	125
5.2 In situ Neutron Diffraction: Long Time Scales.....	127
5.2.1 $\text{Ti}_3\text{SiC}_2$ Reactive Sintering Synthesis Mechanism .....	127
5.2.2 $\text{Ti}_3\text{AlC}_2$ Reactive Sintering Synthesis Mechanism .....	129
5.2.3 $\text{Ti}_3\text{SiC}_2$ Synthesis Kinetics .....	130
5.3 In situ Neutron Diffraction: Short Time Scales .....	132
5.3.1 $\text{Ti}_3\text{SiC}_2$ SHS Synthesis Mechanism.....	132
5.3.2 In situ Diffraction Differential Thermal Analysis .....	134
5.4 Designer Processing Routes from In Situ Neutron Diffraction Analysis.....	135
5.4.1 Inter-Conversion of MAX Phases .....	135
5.4.2 Intercalation of the A Element into a Crystalline Precursor ...	136
5.4.3 Lessons Learned .....	139
5.5 Design of Future In Situ Diffraction Equipment .....	140
5.5.1 In Situ Diffraction Chamber Design (Institutional) .....	141
5.5.2 In Situ Reaction Chamber Design (User Inserts) .....	144
5.5.3 Assembled ISRC Design .....	145
References .....	147

## 6 Time-Resolved, Electric-Field-Induced Domain Switching and Strain in Ferroelectric Ceramics and Crystals

<i>Jacob L. Jones, Juan C. Nino, Abhijit Pramanick, and John E. Daniels</i> .....	149
6.1 Introduction .....	149
6.1.1 Piezoelectricity, Ferroelectricity, and Device Applications ....	149
6.1.2 Time-Resolved Neutron Scattering .....	152
6.1.3 Stroboscopic Techniques .....	153
6.2 Experimental .....	154
6.2.1 Materials Under Investigation .....	154
6.2.2 Instrumentation .....	155
6.3 Domain Wall Motion in Ferroelectric Ceramics .....	157
6.3.1 Application of Static Electric Fields .....	157
6.3.2 Application of Subcoercive, Periodic Electric Fields .....	159
6.4 Time-Resolved Studies of Lattice Strain in Ferroelectric Ceramics ..	161
6.5 Domain Switching and Strain in Ferroelectric Relaxor Single Crystals .....	164

6.6	Future Opportunities and Outlook for Time-Resolved Scattering of Ferroelectrics .....	169
6.6.1	Instrumentation Developments .....	170
6.6.2	Application to other Structures and Phenomena .....	171
6.6.3	Correlation Between Macroscopic Properties and Diffraction Measurements .....	172
	References .....	173
<b>7</b>	<b>Time-Resolved Phonons as a Microscopic Probe for Solid State Processes</b>	
	<i>Götz Eckold</i> .....	177
7.1	Introduction .....	177
7.2	Techniques .....	178
7.3	Kinetics Between Seconds and Years: Demixing Processes in Simple Systems .....	181
7.3.1	Basics of Demixing and Phase Diagrams of Silver-Alkali Halides .....	181
7.3.2	Experimental .....	184
7.3.3	Nucleation and Growth in KCl–NaCl Mixed Crystals .....	184
7.3.4	Spinodal Decomposition in AgCl–NaCl Mixed Crystals .....	184
7.3.5	The Intermediate Case: AgBr–NaBr .....	194
7.4	Kinetics in the Microsecond Regime: Phase Transitions in Ferroelectrics .....	203
7.4.1	Modulated Ferroelectrics and Softmode Transitions .....	203
7.4.2	Experimental .....	204
7.4.3	The Lock-in Transition in $K_2SeO_4$ .....	205
7.4.4	The Ferroelectric Phase in $SrTiO_3$ .....	207
7.5	Concluding Remarks and Future Prospects for Time-Resolved Inelastic Scattering .....	208
	References .....	210
<b>8</b>	<b>Small Angle Neutron Scattering as a Tool to Study Kinetics of Block Copolymer Micelles</b>	
	<i>Reidar Lund</i> .....	213
8.1	Introduction .....	213
8.2	Theoretical Background .....	216
8.2.1	Brief Introduction of Thermodynamics and Scaling Laws .....	216
8.2.2	Aniansson and Wall Mechanism .....	217
8.2.3	Scaling Theory – Halperin and Alexander .....	218
8.2.4	Other Theories .....	220
8.3	Experimental Background: Small Angle Neutron Scattering .....	221
8.3.1	Structure with SANS: Core-Shell Model .....	221
8.3.2	Equilibrium Kinetics and Time Resolved SANS .....	224

8.4 Results – Equilibrium Micellar Kinetics ..... 226  
 8.4.1 Low Molecular Weight Surfactant Micelles ..... 226  
 8.4.2 Block Copolymer Micelles ..... 227  
 8.4.3 Amphiphilic Diblock Copolymer Micelles  
 in Aqueous Solutions ..... 228  
 8.4.4 Diblock Copolymer Micelles in Organic Solvents ..... 233  
 8.4.5 Triblock Copolymer Micelles in Organic Solvents ..... 235  
 8.5 Concluding Remarks and Outlook ..... 236  
 References ..... 238

**9 Stroboscopic Small Angle Neutron Scattering Investigations  
of Microsecond Dynamics in Magnetic Nanomaterials**

*A. Wiedenmann, R. Gähler, R. P. May, U. Keiderling, K. Habicht,  
S. Prévost, M. Klokkenburg, B. Ern , and J. Kohlbrecher* ..... 241  
9.1 Introduction ..... 241  
9.2 Stroboscopic SANS Techniques ..... 242  
9.3 Experimental ..... 245  
9.4 Scattering Cross-Sections ..... 246  
9.5 Results ..... 248  
9.5.1 Relaxation of Magnetic Correlations Toward  
Equilibrium in Cobalt-FF ..... 248  
9.5.2 Response on Oscillating Field in Continuous  
Stroboscopic SANS ..... 252  
9.5.3 Response from Pulsed Stroboscopic Technique TISANE ..... 255  
9.5.4 Temperature and Frequency Dependence ..... 256  
9.5.5 Co-Precipitates in Solid CuCo Alloy ..... 260  
9.6 Discussion ..... 261  
9.7 Conclusion ..... 262  
References ..... 262  
**Index** ..... 265
