Preface — VII

Preface to the Second Edition — IX

How to Use the Book — XI

List of QR Codes — XIII

1 Introduction — 1

2 Solid-State Physics Foundation — 3

2.1 Schrödinger Equation — 3

2.1.1 Schrödinger Equation in 1D — 3

2.1.2 The Particle-in-the-Box — 4

2.2 Free Electrons in Various Dimensions — 5

2.2.1 From 3D to 2D Systems — 6

2.2.2 From 2D to 1D Systems — 7

2.2.3 From 1D to 0D Systems — 9

2.3 Electrons in Solids—Bravais Lattice, Wigner–Seitz Cell, Brillouin Zone and Related Concepts — 10

2.3.1 Reciprocal Space — 12

2.3.2 The Brillouin Zone — 13

2.4 Tight-Binding Calculation of Band Structures — 14

2.4.1 Discrete Schrödinger Equation — 15

2.4.2 Linear Combination of Atomic Orbitals — 17

2.4.3 Periodic Potentials—Tight-Binding in 1D — 19

2.4.4 Tight-Binding in 2D(3D) — 24

2.4.5 Overlap Integrals and Direction Cosines — 26

2.4.6 Recipe for General Tight-Binding Method — 29

2.4.7 Complex Band Structure — 32

2.4.8 Band Structure at Surfaces — 33

2.5 Effective Mass Approximation — 35

2.5.1 Effective Mass Tensor — 37

2.5.2 Energy-Dependent Effective Mass — 38

2.6 Bulk Materials — 40

2.6.1 Silicon—Crystal Structure and Material Properties — 40

2.6.2 Tight-Binding Calculation of Silicon — 42

2.6.3 Band Structure of Silicon — 44

2.7 The Surface of Bulk Crystals — 46

2.8 Two-Dimensional Materials — 47

2.8.1	Monolayer Graphene —	47
2.8.2	Bilayer Graphene —	50
2.8.3	Transition Metal Dichalcogenides —	53
2.8.4	Other Two-Dimensional Materials —	56
2.8.5	Graphene Nanoribbons —	56
2.9	Carbon Nanotubes —	58
2.10	The Fermi Distribution Function —	65
2.10.1	The Fermi Distribution for Holes —	67
2.10.2	Fermi Distribution Function for Dopants —	68
2.11	Density of States and Carrier Density —	71
2.11.1	Density of States —	72
2.11.2	Density of States in the Case of Anisotropic Effective Masses —	75
2.11.3	Fermi Integrals —	76
2.12	Density of States Beyond the Parabolic Dispersion —	78
2.12.1	Density of States of an Arbitrary Band Structure —	78
2.12.2	Disorder and Band-Tailing —	78
2.12.3	Density of States at Surfaces —	80
2.12.4	Density of States of Graphene —	81
2.12.5	Density of States of Carbon Nanotubes —	82
2.13	Current Flow —	84
2.13.1	Quasiclassical Approach —	84
2.13.2	Landauer Formalism —	87
2.13.3	Multimode Transport —	90
3	Semiconductor Fabrication —	93
3.1	Wafer Cleaning —	93
3.1.1	Solvents —	93
3.1.2	Piranha Cleaning Solution —	94
3.1.3	RCA Clean —	95
3.2	Oxidation of Silicon —	98
3.2.1	Thermal Oxidation —	99
3.2.2	Local and Geometry-Dependent Oxidation of Silicon —	102
3.2.3	Chemical Oxidation of Silicon —	103
3.3	Rapid Thermal Nitridation —	104
3.4	Wafer Bonding —	105
3.5	Lithography —	107
3.5.1	Resist Coating —	107
3.5.2	Optical Lithography —	108
3.5.3	Electron-Beam Lithography —	118
3.5.4	Spacer Patterning —	124
3.6	Wet Chemical Etching —	127
3.6.1	Etching of Oxides —	127

3.6.2	Etching of Silicon Nitride —	129
3.6.3	(Digital) Etching of Silicon —	129
3.6.4	Anisotropic Silicon Etching —	130
3.7	Dry Etching —	134
3.7.1	Reactive Ion Etching —	134
3.7.2	Inductively Coupled Plasma Etching —	136
3.7.3	Tuning the Anisotropy of Dry Etching —	137
3.7.4	Selectivity of Dry Etching —	138
3.7.5	Plasma Etching —	139
3.7.6	Sequential Etch Process I—Atomic Layer Etching —	140
3.7.7	Sequential Etch Process II—Bosch Process —	141
3.7.8	Issues of Dry Etching—Mask Erosion and Overpolymerization —	143
3.7.9	Issues of Dry Etching—ARDE, Microloading, Trenching, Grassing —	144
3.8	Thin Film Deposition —	145
3.8.1	Physical Vapor Deposition—Electron-Beam Evaporation —	147
3.8.2	Physical Vapor Deposition—Sputter Deposition —	149
3.8.3	Chemical Vapor Deposition—Low Pressure CVD —	153
3.8.4	Chemical Vapor Deposition—Plasma-Enhanced CVD —	156
3.9	Damascene Process —	156
3.10	Ion Implantation and Activation —	160
3.11	Silicidation —	161
3.11.1	Nickel Silicidation —	162
3.11.2	Dopant Segregation During Nickel Silicidation —	163
3.12	Hydrogen Annealing —	165
3.13	Low-Dimensional Semiconductors —	166
3.13.1	Top-Down Fabrication of Nanowires —	167
3.13.2	Growth of Nanowires —	169
3.13.3	2D Materials—Exfoliation and Visibility on Substrates —	170
3.13.4	2D Materials Transfer—PVA/PMMA Method —	172
4	Basic Ingredients for Nanoelectronics Devices —	176
4.1	Doping of Semiconductors —	176
4.1.1	Degenerate Doping Concentration —	179
4.2	P-N Junctions —	181
4.3	Doping at the Nanoscale —	184
4.3.1	Hydrogen Model for Activation of Dopants —	184
4.3.2	Deactivation of Dopants in Nanoscale Structures —	187
4.4	NESSIAS as an Alternative to Impurity Doping —	190
4.5	Metal-Oxide-Semiconductor Capacitor —	193
4.5.1	Depletion Capacitance —	196
4.5.2	Interface-States Capacitance —	197
4.5.3	Density-of-States or Quantum Capacitance —	198

4.5.4	Accumulation Capacitance —	202
4.5.5	Gate Dielectrics with High Dielectric Constant —	203
4.6	Metal-Semiconductor Contacts —	206
4.6.1	Fermi Level Pinning —	208
4.6.2	MS Contacts to Highly Doped Semiconductors —	212
4.6.3	Fermi-Level Depinning with Ultrathin Insulators —	214
4.6.4	Transfer Length of Contacts —	217
4.7	Heterostructures —	218
5	Metal-Oxide-Semiconductor Field-Effect Transistors —	219
5.1	Operation Principles—Gradual Channel Approximation —	219
5.2	Nanoscale Transistors with Ballistic Transport—From 1D to 2D to Bulk MOSFETs —	222
5.2.1	Dependence on Terminal Voltages—Top-of-the-Barrier Model —	225
5.2.2	Off-State —	229
5.2.3	On-State—Output Characteristics —	231
5.2.4	On-State—Transfer Characteristics —	234
5.3	Impact of Scattering —	234
5.4	Optimizing the Performance of MOSFETs —	235
5.5	A Simple Model for the Electrostatics —	237
5.6	Scaling and the Appearance of Short-Channel Effects —	239
5.7	Screening Lengths in Nanoscale FETs —	242
5.8	Ultrathin-Body Field-Effect Transistors —	243
5.8.1	Single-Gate Ultrathin-Body SOI-MOSFETs —	244
5.8.2	Double-Gate FinFETs —	246
5.8.3	Multigate Nanosheet and Nanowire FETs —	247
5.9	Ultimate Scaling of MOSFETs —	249
5.9.1	Classical and Quantum Capacitance Limits —	249
5.9.2	Reducing Parasitic Capacitances with Nanowire Bundles —	251
5.9.3	Tunneling Through the Gate Dielectric —	254
5.9.4	Direct Source-To-Drain Tunneling —	255
6	Device Simulation —	258
6.1	Poisson's Equation in 1D Devices —	258
6.1.1	Finite Difference Discretization —	258
6.1.2	Conformal Mapping —	263
6.2	Nonequilibrium Green's Function Formalism in Single-Band 1D-FETs —	266
6.2.1	The Green's Function —	266
6.2.2	Discretization of the Green's Function —	269
6.2.3	Including Contacts —	271
6.2.4	Carrier Density in Nonequilibrium —	274
6.2.5	Self-Consistency —	276

6.2.6	Current Flow — 279
6.3	Extensions of the 1D NEGF — 280
6.3.1	Scattering with Buettiker Probes — 280
6.3.2	Gate Leakage with Buettiker Contacts — 283
6.3.3	Multimode Transport with Independent 1D Subbands — 285
6.3.4	Including Conduction and Valence Bands—Energy-Dependent Effective Mass — 286
6.3.5	Including Conduction and Valence Bands—1D Simulation with Two-Band Tight-Binding Calculation — 287
6.4	Simulations of Devices in Higher Dimensions — 290
6.4.1	Poisson Equation — 291
6.4.2	NEGF Devices in 2D/3D — 293
7	Metal-Source-Drain Field-Effect Transistors — 295
7.1	Operating Principles of SB-MOSFETs — 297
7.1.1	Ultrathin-Body SB-MOSFETs — 301
7.1.2	Output Characteristics — 311
7.2	Schottky-Barrier Lowering with Dopant Segregation During Silicidation — 315
7.2.1	Measurements and Discussion — 318
7.2.2	Temperature Dependence — 319
7.3	Interface Engineering with Depinning Layers — 321
7.3.1	Metal Source/Drain Device Using Interface Engineering — 322
7.3.2	Horizontal Metal-Insulator Contacts — 323
7.4	Reconfigurable Devices — 324
7.4.1	Program-Gate at Drain versus Program-Gate at Source — 326
8	Carbon Nanotube Field-Effect Transistors — 331
8.1	Carbon Nanotube FETs as SB-MOSFETs — 331
8.1.1	Impact of the Device Geometry — 331
8.1.2	Multimode Transport in CNTFETs — 333
8.1.3	Contact Formation to CNTs — 338
8.1.4	Reconfigurable CNTFETs — 344
8.2	Conventional CNTFET Devices — 348
9	Steep Slope Transistors — 351
9.1	Band-to-Band Tunnel Field-Effect Transistors — 352
9.1.1	Operating Principles of TFETs—Off-State — 353
9.1.2	Operating Principles of TFETs—On-State — 360
9.1.3	TFET Optimization — 366
9.2	Alternative Steep-Slope Transistor Concepts — 377
9.2.1	TFETs with Line-Tunneling — 378

9.2.2	Energy-Filtering Devices —	380
9.2.3	Impact Ionization Field-Effect Transistors —	382
9.2.4	FETs with Feedback Mechanism —	385
9.2.5	Negative Capacitance FETs —	387
9.2.6	Field-Effect Controlled Modulation of the Band Gap —	388
10	Device Based on Two-Dimensional Materials —	391
10.1	Graphene FETs —	391
10.1.1	Graphene FETs—Contacts —	393
10.1.2	Graphene Nanoribbon FETs —	397
10.1.3	Bilayer Graphene —	399
10.2	Transition Metal Dichalcogenides —	400
10.2.1	Reconfigurable TMDC-FETs with Triple-Gate Structures —	402
10.3	Van der Waals Heterostructures —	406
11	Cryogenic Electronics —	408
11.1	MOSFETs at Cryogenic Temperatures —	408
11.1.1	Switching Behavior of Cryogenic MOSFETs —	409
11.2	Optimizing the Switching of Cryogenic MOSFETs—Improved Screening —	415
11.2.1	Suppression of Band-Tailing with Effective Oxide Scaling —	415
11.2.2	Suppression of Band-Tailing with λ_{ch} -Reduction —	418
11.3	Optimizing the Switching of Cryogenic MOSFETs—Reduction of Disorder —	419
11.3.1	Suppression of Disorder with Ultrathin SiN Layers —	419
11.3.2	Suppression of Disorder in All-2D Bilayer Graphene Devices —	421
11.4	Scalability of Cryogenic MOSFETs —	422
11.5	Dopants in Cryogenic MOSFETs —	426
11.5.1	Dopants in Source/Drain in Nanoscale Cryogenic FETs —	427
11.5.2	Dopants in the Channel of Nanoscale Cryogenic FETs —	428
A	Color Map for 2D Materials —	431
	Bibliography —	433
	Index —	447
