Introduction	1

1 Safety of Diagnostic Ultrasonic Equipment: The Relevance of Acoustic Output Information to the Clinical User

R.C. Preston

1.1 Introduction	5
1.2 The Relevance of Acoustic Output Information	6
1.2.1 What Is Acoustic Output Information?	6
1.2.2 What Is Acoustic Output Information Used For?	6
1.2.3 Why Should You Know the Acoustic Output Levels of Your Equipment?	6
1.2.4 Are Acoustic Output Levels Really that Important?	6
1.3 Acoustic Output Information	7
1.3.1 What Type of Acoustic Output Information Is Important?	7
1.3.2 What Type of Information Is Given?	8
1.3.3 Why Are Different Parameters Important?	8
1.3.4 How Can You Obtain Acoustic Output Information?	8
1.3.5 Are There Sources of Published Data on Acoustic Output?	9
1.4 Acoustic Fields and Output of Medical Ultrasonic Equipment	9
1.4.1 What Types of Ultrasonic Fields Are Generated?	9
1.4.2 What Type of Field Is Generated by Diagnostic Imaging Equipment?	9

1.4.3	What Type of Field Is Generated by Doppler Equipment?	10
1.4.4	What Type of Field Is Generated by Physiotherapy Equipment?	10
1.4.5	What Type of Field Is Generated by a Lithotripter?	11
1.4.6	What Are the Acoustic Output Levels of Different Equipment?	11
1.5	Standards and Regulations	11
1.5.1	What Is Being Done Internationally About Acoustic Output and Safety?	11
1.5.2	What Is Being Done Nationally About Acoustic Output and Safety?	12
1.6	The Impact on the Clinician	13
1.6.1	What Should You Be Doing?	13
1.6.2	What Are the Consequences of High Power/Intensities?	14
1.6.3	What Modes Produce the Highest Power/Intensities?	14
1.6.4	What Intensity Levels Are Acceptable?	14
1.6.5	What Can You Do to Minimise Exposure of Patients to High Power/Intensities?	15
1.6.6	What Are the Consequences of High Acoustic Pressures?	15
1.6.7	What Modes Produce the Highest Pressures?	16
1.6.8	What Pressure Levels Are Acceptable?	16
1.6.9	What Can You Do to Minimise Exposure to High Acoustic Pressures?	16
1.6.10	What Should You Do to Keep Up to Date?	16
1.6.11	What Should You Do if You Have the Opportunity of Buying New Equipment?	17
1.7	Conclusions	17
1.8	Recommended Additional Reading Material	17
1.9	References	18

2 Fundamentals of Ultrasonic Propagation

R.C. Chivers

2.1	Introduction	19
2.2	Ultrasonic Wave Propagation	19
2.2.1	Types of Wave	19
2.2.2	Wave Parameters	20
2.2.3	Linear Wave Propagation	21
2.2.4	Mechanics of Echo Production	24
2.2.5	Attenuation	26
2.3	Transduction	27
2.3.1	Piezoelectric Materials	27
2.3.2	Transducer Construction	28
2.4	Ideal Fields	29
2.4.1	Sinusoidal Time Excitation	29

2.4.2	Axial Distribution Near Field	29
2.4.3	Far Field	31
2.4.4	Rectangular Sources	31
2.4.5	General Time Excitation	32
2.4.6	Focusing	32
2.5	Nonlinear Propagation	33
2.6	Recommended Additional Reading Material	33

3 Overview of Measurement Techniques

B. Zeqiri

3.1	Introduction	35
3.2	Key Acoustical and Other Field Parameters	35
3.3	Acoustic Pressure	37
3.3.1	Pulse-echo Technique Using a Small Target	37
3.3.2	Piezoelectric Hydrophones	37
3.3.3	Optical Techniques	38
3.4	Acoustic Displacement	40
3.4.1	Optical Interferometry	40
3.4.2	The Capacitance Probe	41
3.5	Radiation Force	41
3.5.1	Large Target – The Radiation Force Balance	41
3.5.2	Small Target – The Suspended Sphere Radiometer	42
3.5.3	Surface Levitation	44
3.6	Temperature Rise	45
3.6.1	Calorimetry	45
3.6.2	Thermal Probes	45
3.7	Summary of Quantitative Measurement Techniques	47
3.8	Assessment of Measurement Uncertainty	50
3.9	Measurement Traceability	51
3.10	Qualitative Techniques	53
3.11	References	55

4 Hydrophones

S.P. Robinson

4.1	Introduction	57
4.2	Types of Hydrophone	58
4.2.1	Ceramic Hydrophones	58
4.2.2	Pvdf Needle-Probe Hydrophones	60
4.2.3	Pvdf Membrane Hydrophones	60
4.2.4	Multielement Hydrophones – NPL Ultrasound Beam Calibrator	63
4.3	Using a Hydrophone	64
4.3.1	Water	64
4.3.2	Mounting and Alignment	66
4.3.3	Shielding	66
4.3.4	Reflections	66
4.3.5	Active Element Size	67

4.3.6	Temperature	67
4.3.7	Bandwidth Limitations	68
4.3.8	Calibration	69
4.3.9	Hydrophone and Amplifier Impedance	70
4.3.10	Which Hydrophone to Choose?	71
4.4	References	72

5 Ultrasonic Power Balances

F. Davidson

5.1	Introduction	75
5.2	The Radiation Force Balance	76
5.3	Choosing a Configuration and Target	77
5.3.1	Reflecting Targets	78
5.3.2	Absorbing Targets	79
5.4	Examples of Radiation Force Balances	80
5.4.1	General	80
5.4.2	The NPL Radiation Force Balance	80
5.4.3	A Commercial Portable Power Balance	82
5.4.4	The Tethered Float Radiometer	82
5.5	Measurement Considerations	84
5.5.1	Propagating Medium and Attenuation	84
5.5.2	Streaming and Convection Currents	85
5.5.3	Cavitation	86
5.5.4	Thermal Drifts	86
5.5.5	Coping With Scanning Systems	86
5.6	Summary of Important Points to Note During Measurements	88
5.7	References	89

6 Hydrophone-Based Measurements on a Specific Acoustic Pulse Part 1: Field Characterisation

R.C. Preston

6.1	Introduction	91
6.2	The Acoustic Pulse Waveform	91
6.3	Pressure Parameters	92
6.4	Derivation of Intensity from Pressure Measurements ...	95
6.5	Intensity Parameters	96
6.6	Spatial-peak Parameters	98
6.7	Beam-Shape Information	98
6.8	Spatial-Average Parameters	100
6.9	Power Parameters	100
6.10	Output Beam Intensity	101
6.11	Locating Maxima in Fields	101
6.12	Concept of <i>in-situ</i> or Derated Levels	102
6.13	References	105

7 Measurements on a Specific Acoustic Pulse Part 2:**Measurements***D.R. Bacon*

7.1	Introduction	107
7.2	The Measurement System	107
7.2.1	System Bandwidth	108
7.2.2	Spatial Resolution	109
7.2.3	Digital Acquisition Systems	113
7.2.4	Analogue Acquisition Systems	114
7.3	Spatial-Peak Measurements	115
7.3.1	Finding the Acoustic Axis	116
7.3.2	Finding the Measurement Plane	116
7.3.3	Calculation of Acoustic Parameters	116
7.4	Spatial-Average Measurements	119
7.4.1	Deciding on the Scan Parameters	120
7.4.2	Practical Details	121
7.5	Continuous-Wave Systems	121
7.5.1	CW Doppler Systems	122
7.5.2	Physiotherapy Equipment	123
7.6	Accuracy Assessment	124
7.7	Recommended Additional Reading Material	127
7.8	References	128

8 Real-Time Scanning Systems Part 1: Modes of Operation*A. Shaw*

8.1	Introduction	129
8.2	Principles of Operation	130
8.2.1	Imaging	130
8.2.2	Doppler	133
8.3	Pulse Characteristics	133
8.3.1	Imaging	133
8.3.2	Pulsed Doppler	134
8.3.3	Duplex	135
8.3.4	CW Doppler	136
8.4	Pulse Patterns	136
8.4.1	Discrete Modes	137
8.4.2	Combined Modes	138
8.4.3	Multiple Focal Zones	140
8.4.4	Repeated Lines	141
8.5	Scanner Settings	142
8.5.1	Imaging	142
8.5.2	Pulsed Doppler	143
8.5.3	Duplex	143
8.5.4	CW Doppler	143
8.6	Discussion	143
8.7	Recommended Further Reading Material	144

9 Real-Time Scanning Systems Part 2: Measurements

R.C. Preston

9.1 Introduction	145
9.2 Measurement Systems	145
9.2.1 Test-tank Arrangements	145
9.2.2 Mechanical Clamping of the Transducer	146
9.2.3 Bubbles	147
9.2.4 Measurement Methods Without an Electrical Trigger	147
9.2.5 Electrical Trigger	148
9.3 Making Measurements	150
9.3.1 Locking on to Repetitive Scan Lines	150
9.3.2 Modes of Operation – Special Problems	151
9.3.3 Scan Format	152
9.3.4 Variation Between Scan Lines	153
9.3.5 Multiple Focal Zones and Multiple Firing	154
9.3.6 Overlap Factor in Determining I_{spta}	155
9.3.7 Asymmetrical Beam Shapes	157
9.3.8 Total Power	158
9.3.9 Corrections	158
9.4 Measurement Uncertainties	160
9.5 References	160

Glossary: Definitions Relevant to Ultrasonic Field
