|                                                                       |     |
|-----------------------------------------------------------------------|-----|
| <b>1. Introduction</b>                                                | 1   |
| 1.1 Basic Models of Distributed Active Systems                        | 3   |
| 1.2 Engineering and Control of Active Systems                         | 9   |
| <b>2. Bistable Media</b>                                              | 15  |
| 2.1 One-Component Models of Bistable Media                            | 15  |
| 2.2 Trigger Waves                                                     | 19  |
| 2.3 General Properties of Patterns<br>in One-Component Bistable Media | 24  |
| 2.4 Waves of Transition from an Unstable State                        | 30  |
| <b>3. Excitable Media</b>                                             | 33  |
| 3.1 Travelling Pulses                                                 | 33  |
| 3.2 Cellular Automaton Models                                         | 42  |
| 3.3 Spiral Waves                                                      | 50  |
| 3.4 Front Kinematics                                                  | 58  |
| 3.5 Resonance, Drift, and Meandering of Spiral Waves                  | 66  |
| 3.6 Wave Patterns in Three Dimensions                                 | 76  |
| <b>4. Oscillatory Media</b>                                           | 85  |
| 4.1 Phase Dynamics                                                    | 85  |
| 4.2 Plane Waves                                                       | 89  |
| 4.3 Pacemakers                                                        | 92  |
| 4.4 Spiral Waves                                                      | 95  |
| <b>5. Active Media with Long-Range Inhibition</b>                     | 105 |
| 5.1 Integral Negative Feedback                                        | 105 |
| 5.2 Activator-Inhibitor Systems                                       | 109 |
| 5.3 Interfaces and Strata                                             | 112 |
| 5.4 Spikes                                                            | 116 |
| 5.5 Instabilities of Localized Structures                             | 120 |
| 5.6 Turing Patterns                                                   | 127 |

|                                                        |     |
|--------------------------------------------------------|-----|
| <b>6. Neural Networks</b>                              | 137 |
| 6.1 Automata, Spins, and Neurons                       | 137 |
| 6.2 Associative Memories                               | 142 |
| 6.3 Complex Combinatorial Optimization                 | 152 |
| 6.4 The Perceptron                                     | 158 |
| 6.5 Back Propagation of Errors                         | 162 |
| 6.6 The Boltzmann Machine                              | 166 |
| 6.7 Storage of Temporal Sequences                      | 171 |
| 6.8 Networks with Mediators                            | 176 |
| <b>7. Reproductive Networks</b>                        | 180 |
| 7.1 Competition and Cooperation of Reproductive Agents | 180 |
| 7.2 Selection                                          | 184 |
| 7.3 Coexistence and Multistability                     | 188 |
| 7.4 Waves of Reproduction                              | 192 |
| 7.5 Evolution and Information Processing               | 196 |
| <b>References</b>                                      | 203 |
| <b>Subject Index</b>                                   | 211 |
