

TABLE OF CONTENTS

INVITED ADDRESSES

V. G. Cerf, D. D. Cowan, R. C. Mullin and R. G. Stanton*: A partial census of trivalent generalized Moore networks.	1
R. C. Mullin: A note on balanced weighing matrices.	28
H. Shank: The theory of left-right paths.	42
W. T. Tutte: The graph of the chromial of a graph.	55

CONTRIBUTED PAPERS

Alan Brace* and J. Brett: An alternative to the round robin tournament.	62
H. T. Clifford: Host-parasite relationships.	79
R. J. Collens and R. G. Stanton*: Computer assisted generation of difference blocks.	83
Elizabeth Cousins and W. D. Wallis*: Maximal sets of one-factors.	90
Annette J. Dobson: Comparing the shapes of trees.	95
Margaret Doherty: An amusing proof in fluctuation theory.	101
H. M. Finucan: "Combination of events" made easy.	105

VIII

Douglas D. Grant: Stability and operations on graphs.	116
Pauline Cain Hogarth: Decomposition of complete graphs into 6-stars and into 10-stars.	136
D. A. Holton* and K. C. Stacey: Some problems in permutation graphs.	143
Richard B. Lakein and Jennifer Seberry Wallis: On the matrices used to construct Baumert-Hall arrays.	156
Charles H. C. Little: A conjecture about circuits in planar graphs.	171
K. L. McAvaney: Stability and cacti.	176
Michael J. McLean* and Daniel B. Johnston: An algorithm for finding the shortest terminal strings which can be produced from non-terminals in context- free grammars.	180
Alan Rahilly: Some translation planes with elations which are not translations.	197
Leigh Roberts: All erections of a combinatorial geometry and their authomorphism groups.	210
Anne Penfold Street* and W. D. Wallis: Nested designs from sum-free sets.	214
G. Szekeres: Non-colourable trivalent graphs.	227
