

Contents

1. Brownian Motion	1
1.1 Brownian Motion as a Stochastic Process	2
1.2 The Central Limit Theorem and Brownian Motion	8
1.3 The Langevin Equation and Harmonic Analysis	14
1.4 Gaussian Processes	22
1.5 Brownian Motion Modeled by a Gaussian Process	27
1.6 The Fluctuation-Dissipation Theorem	31
2. Physical Processes as Stochastic Processes	40
2.1 Random Frequency Modulation	40
2.2 Brownian Motion Revisited	48
2.3 Markovian Processes	55
2.4 Fokker-Planck Equation	62
2.5 Contraction of Information. Projected Processes	69
2.6 Derivation of Master Equations	77
2.7 Brownian Motion of a Quantal System	84
2.8 Boltzmann Equation	90
2.9 Generalized Langevin Equation and the Damping Theory	97
3. Relaxation and Resonance Absorption	109
3.1 Linear Irreversible Processes	109
3.1.1 Mechanical and Thermal Forces vs Displacements and Currents	110
3.1.2 Linear Relations	110
3.1.3 Response to a Pulsed Force	112
3.1.4 Relaxation Phenomena	114
3.2 Complex Admittance	115
3.2.1 Harmonic (Fourier) Analysis	116
3.2.2 Energy Dissipation	117
3.3 Debye Relaxation	120
3.3.1 Dielectric Relaxation	120
3.3.2 Response Functions with Exponential Damping	121
3.3.3 Solution of Polar Molecules	123
3.4 Resonance Absorption	125
3.4.1 Van Vleck-Weisskopf-Fröhlich Type Resonance Absorption	126

3.4.2 Nuclear Magnetic Resonance	128
3.4.3 Failure at High Frequencies	131
3.5 Wave Number-Dependent Complex Admittance	131
3.5.1 Non-Markovian Nonlocal Linear Relations	132
3.5.2 Complex Admittance for the Diffusion Phenomenon	134
3.6 Dispersion Relations	136
3.6.1 Proof of the Dispersion Relations	136
3.6.2 Dispersion Relations and Causality	138
3.6.3 Analytical Continuation into the Complex Plane	138
3.7 Sum Rules and Interpolation Formulas	139
3.7.1 Moment Sum Rules	140
3.7.2 Non-Markovian Law of Diffusion	143
 4. Statistical Mechanics of Linear Response	 146
4.1 Static Response to External Force	146
4.1.1 Static Admittance and the Canonical Correlation	147
4.2 Dynamic Response to External Force	150
4.2.1 The Response Function and the Poisson Bracket	150
4.2.2 Kubo Formula	154
4.2.3 Initial Values of the Response Function and Its Derivatives	158
4.3 Symmetry and the Dispersion Relations	158
4.3.1 Spectral Function and Its Symmetry	158
4.3.2 Symmetry in the Current Response	162
4.3.3 Symmetry in the Displacement Response	163
4.3.4 Proof of the Dispersion Relations	164
4.4 Fluctuation and Dissipation Theorem	167
4.4.1 Symmetrized Correlation	167
4.4.2 The Equivalence Between the Symmetrized Correlation Function and the Response or the Relaxation Function	168
4.4.3 Fluctuation-Dissipation Theorem	170
4.5 Density Response, Conduction and Diffusion	171
4.5.1 Density and Current in Response to the External Field	171
4.5.2 Relaxation of the Density Response and the Density Fluctuation	174
4.5.3 Shielding of the External Potential	176
4.5.4 Resistivity Formula	178
4.5.5 Dielectric Shielding and Electric Conductivity	179
4.5.6 Kramers-Kronig Relations and the Sum Rules	181
4.6 Response to Thermal Internal Forces	183
4.6.1 Onsager's Postulate	184
4.6.2 Fluctuation of Macrovariables as Brownian Motion	185
4.6.3 A General Formulation of Onsager's Postulate	187
4.6.4 Nonequilibrium Density Matrix	190

4.7	Some Remarks on the Linear-Response Theory	196
4.7.1	The Kinetic Method Versus the Linear-Response Theory	196
4.7.2	Van Kampen's Objection	198
4.7.3	Spurious Singularities at the Zero Value of the External Field	199
4.7.4	Singularities at $k = 0, \omega = 0$	200
5.	Quantum Field Theoretical Methods in Statistical Mechanics	203
5.1	Double-Time Green's Functions	203
5.1.1	Retarded Green's Functions	204
5.1.2	Advanced Green's Functions	206
5.2	Chain of Equations of Motion and the Decoupling Approximation	207
5.2.1	Chain of Equations of Motion	208
5.2.2	Complex Dielectric Function of a Plasma in a Decoupling Approximation	210
5.3	Relation to the Kinetic Equation	216
5.3.1	Klimontovich Operator	216
5.3.2	Self-Consistent Field Approximation	217
5.3.3	Plasma Oscillation	220
5.4	Single-Particle Green's Function and the Causal Green's Function	222
5.4.1	Single-Particle Green's Functions	222
5.4.2	Single-Particle Green's Functions for Free Particles	224
5.4.3	Causal Green's Functions	225
5.5	Basic Formula for Perturbational Expansion	226
5.5.1	Perturbational Expansion of the Equilibrium Density Matrix	227
5.5.2	Perturbational Expansion of the Thermodynamic Potential	228
5.6	Temperature Green's Function	229
5.6.1	Temperature Green's Functions (Matsubara-Green's Functions)	229
5.6.2	Fourier Analysis of the Temperature Green's Function	230
5.6.3	Single-Particle Temperature Green's Function for Noninteracting Particles	232
5.6.4	Abrikosov-Gor'kov-Dzyaloshinskii-Fradkin Theorem	233
5.7	Diagram Technique	235
5.7.1	Bloch-De Dominicis Theorem	235
5.7.2	Perturbational Expansion of $\langle \mathcal{P}(\beta) \rangle_0$	238
5.7.3	Correspondence with Feynman Diagrams	240
5.7.4	Matsubara Formula	242
5.8	Dyson Equation	244
5.8.1	Single-Particle Temperature Green's Function	244

XVI Contents

5.8.2 Graphical Summation	246
5.8.3 Feynman Rules	248
5.9 Relationship Between the Thermodynamic Potential and the Temperature Green's Function	253
5.10 Special Case of the Two-Particle Green's Function	255
5.10.1 Two-Particle Green's Function of Zeroth-Order for a Plasma	257
5.10.2 Polarization Operator	258
5.10.3 Electric Charge Density Green's Function	260
General Bibliography of Textbooks	265
References	266
Subject Index	271
