|                                                                          |     |
|--------------------------------------------------------------------------|-----|
| <b>Introduction</b> .....                                                | 1   |
| <br><b>Semantics</b>                                                     |     |
| An Argumentation Theoretic Semantics Based on Non-Refutable Falsity .... | 3   |
| <i>J.J. Alferes and L.M. Pereira</i>                                     |     |
| From Disjunctive Programs to Abduction .....                             | 23  |
| <i>V. Lifschitz and H. Turner</i>                                        |     |
| Semantics of Normal and Disjunctive Logic Programs:                      |     |
| A Unifying Framework .....                                               | 43  |
| <i>T.C. Przymusiński</i>                                                 |     |
| Every Normal Program has a Nearly-Stable Model .....                     | 68  |
| <i>C. Witteveen</i>                                                      |     |
| Logic Programming with Assumption Denial .....                           | 85  |
| <i>J.-H. You and L.Y. Yuan</i>                                           |     |
| <br><b>Computation</b>                                                   |     |
| A Resolution-based Procedure for Default Theories with Extensions .....  | 101 |
| <i>M.D. Barback and J. Lobo</i>                                          |     |
| A General Approach to Bottom-Up Computation of                           |     |
| Disjunctive Semantics .....                                              | 127 |
| <i>S. Brass and J. Dix</i>                                               |     |
| Static Semantics as Program Transformation and                           |     |
| Well-founded Computation .....                                           | 156 |
| <i>S. Costantini and G.A. Lanzarone</i>                                  |     |
| Magic Computation for Well-founded Semantics .....                       | 181 |
| <i>L. Degerstedt and U. Nilsson</i>                                      |     |
| Computing Stable and Partial Stable Models                               |     |
| of Extended Disjunctive Logic Programs .....                             | 205 |
| <i>C. Ruiz and J. Minker</i>                                             |     |
