SECTION I. Perspectives on Thirst

Chapter 1. Evolution of Physiological and Behavioural Mechanisms in Vertebrate Body Fluid Homeostasis

<i>J.T. Fitzsimons</i>	3
Body Fluid Homeostasis	3
Homeostatic Adaptations	4
Phylogeny of Homeostasis in Vertebrates	5
Fish	5
Amphibia	6
Reptiles	7
Birds	8
Mammals	8
Drinking as a Homeostatic Adaptation	9
Two Homeostatic Constants, Osmolality and Extracellular Volume, and the Two Thirsts Resulting When these Deviate from Normal	10
Drinking Behaviour in Submammalian Vertebrates	11
Drinking Behaviour in Mammals	13
Receptors for Thirst Induced by Cellular Dehydration	14
Receptors for Thirst Induced by Extracellular Dehydration	15
Hormones, Neurotransmitters and Other Humoral Factors in Drinking Behaviour	18
Conclusions	20

Chapter 2. Water: Distribution Between Compartments and its Relationship to Thirst

<i>D.J. Ramsay</i>	23
Introduction	23
Fluid Compartments	24
Extracellular and Intracellular Fluid Compartments	24
Interstitial and Plasma Compartments	25
The Hypothalamus and Thirst	26
Regulation of Plasma Osmolality	26

Dehydration Natriuresis	29
Reduction of Extracellular Fluid Volume	30
Interaction of Cellular and Extracellular Dehydration	31
Summary	32
Commentary	34
 Chapter 3. The Ontogeny of Drinking	
<i>W.G. Hall</i>	35
Issues in the Development of Drinking	35
The Ontogeny of Ingestive Responses to Dehydration	37
Infant Mammals are Highly Vulnerable to Fluid Loss, Yet... ..	37
Yet Suckling Behaviour is not Stimulated by Dehydration	38
If Drinking Doesn't Come from Suckling, Where Does it	
Come From?	40
Dehydration Modulates Early Oromotor Responses	41
Maturation of Responses to Dehydration Stimuli	41
The Normal Emergence of Drinking in Rodents	47
Weaning in Other Species	48
Opportunities of Ontogenetic Analysis: Behavioural and	
Neurobiological	49
Commentary	52
 Chapter 4. Influences on Human Fluid Consumption	
<i>D.A. Booth</i>	53
Scientific Study of Thirsty Behaviour	53
Sensations, Signals and Behavioural Neuroscience	54
Drinking Behaviour, Thirst Ratings and Fluid Volumes	54
Controls of Human Fluid Intake	55
Influences on Daily Water Intake	56
Temporal Pattern of Drinks	56
The Single Drink	57
Quantitating Causes of Drinking	57
Integration Among Discrete Influences on Drinking	58
An Outline Causal System of Thirst	60
Sensory Sensitivity of Drinking	61
The Tolerance Triangle	62
Somatic Sensitivity of Drinking	62
Social Sensitivity of Drinking	63
Individual Analysis of Sensory and Social Interactions	64
Thirst and Hunger	65
Fluid Foods not Affecting Eating	65
Commonalities of Hunger and Thirst	66
Origins of Influences on Human Fluid Consumption	66
Learned Preferences for Fluids	66
Learned Water-Specific Dietary Selection	66
Learned Control of Fluid Intake Volume	67
Is Control of Human Fluid Intake Entirely Acquired?	67
Summary	68
Commentary	70

SECTION II. Physiological Influences on Drinking

Chapter 5. Osmoreceptors for Thirst

<i>M.J. McKinley</i>	77
Osmoregulatory Responses	77
Cellular Dehydration and Thirst	77
Location of the Osmoreceptors	79
Osmoreceptors in the Brain	79
Sites in the CNS	80
Osmoreceptors and/or Sodium Sensors	84
Evidence for Sodium Receptors	84
Criticisms of the Sodium Receptor Hypothesis	85
Summary	87
Physiological Significance of Osmoreceptors	87
Commentary	91

Chapter 6. Volume Receptors and the Stimulation of Water Intake

<i>T.N. Thrasher</i>	93
Introduction	93
Integrated Responses to Acute Hypovolaemia	93
Restoration of ECF Volume	95
Evidence for Reflex Stimulation of Drinking	95
Receptors Mediating Reflex Effects on Drinking	97
Evidence for Ang II Stimulation of Drinking	99
Blockade of the Renin–Angiotensin System and Hypovolaemic Drinking	100
Effect of SFO Ablation	102
Effect of Nephrectomy on Hypovolaemic Drinking	102
Is Either the Reflex or the Ang II Stimulus to Drink Essential?	103
Dehydration as a Stimulus to Drinking	103
Contribution of Osmotic and Volaemic Factors to Dehydration-Induced Thirst	104
Does Ang II Contribute to Dehydration-Induced Drinking?	104
Atrial Natriuretic Peptides and Drinking	105
Concluding Remarks	105
Commentary	107

Chapter 7. Hormonal Inputs to Thirst

<i>E. Szczepanska-Sadowska</i>	110
Introduction	110
Hormones: Their Access to the Thirst System and Their Mechanism of Action	110
Hormones: General Comments	110
Access of the Blood-Borne Hormones to the Thirst System	111
Site and Mechanism of Action	112
Evidence Suggesting Involvement of a Hormone in the Control of Thirst	112
Renin–Angiotensin System (RAS)	113
Peripheral and Brain Renin–Angiotensin System	113

Site and Mechanism of Action	114
Regulatory Significance of Dipsogenic Properties of Ang II	115
Vasopressin	117
Effect of Peripheral and Central VP on Water Intake	118
Site and Mechanism of Action	120
Physiological and Pathophysiological Significance	121
Other Hormones	122
Atrial Natriuretic Peptide	122
Tachykinins (TCKs)	122
Oxytocin	123
Neuropeptide Y	123
Corticotropin Releasing Factor and Pro-opiomelanocortin	
Derived Peptides, Opioid Peptides	123
Other Peptide Hormones	124
Steroid Hormones	124
Thyroid Hormones	125
Summary	125

Chapter 8. Mineral Appetite: An Overview

<i>D. Denton</i>	131
Overview of Mineral Appetite	131
Species Differences	133
Sodium Appetite is Innate	134
The Mechanism of Evocation of Sodium Appetite: General	
Considerations	135
Experiments to Determine the Effect of Changes in Sodium	
Concentration of Brain ECF and Intracellular Fluid on Sodium	
Appetite and Thirst	136
Renin–Angiotensin System in the Brain	137
Commentary	145

SECTION III. Neural Pathways of Water Deficit Signals

Chapter 9. Central Projections of Osmotic and Hypovolaemic Signals in Homeostatic Thirst

<i>A.K. Johnson and G.L. Edwards</i>	149
Introduction	149
Mechanisms of Afferent Signalling in the Control of Drinking ...	150
The Distribution of Receptors and Nature of Afferent Signalling	
in the Monitoring of Body Fluid Status	150
The Interaction of the Facilitatory and Inhibitory Influences in	
Deprivation-Induced and Experimental Thirsts	151
Mechanisms of Central Integration and Thirst	152
Introduction	152
The Integrative Role of the SFO/AV3V	153
Hindbrain Mechanisms in the Control of Fluid and Electrolyte	
Balance	162
Summary and Conclusions	168

Chapter 10. Neurochemistry of the Circuitry Subservicing Thirst

<i>B.J. Oldfield</i>	176
Introduction	176
The Role of Angiotensin II in the Initiation of Thirst	178
Central Angiotensinergic Pathways	179
Central Production of Angiotensin II	179
Neural Circuits Containing Angiotensin II	181
Angiotensin Receptors and Their Involvement in the Circuitry of Thirst	182
Correlation of Angiotensin Receptors with Angiotensin-Containing Pathways	184
Other Peptides and Monoamines Involved in Thirst	184
Catecholamines – Lateral Hypothalamus	184
Acetylcholine	186
Prostaglandins	187
Tachykinins	187
Angiotensin Fragments	188
Summary	188

Chapter 11. Central Control of Water and Sodium Chloride Intake in Rats During Hypovolaemia

<i>E.M. Stricker</i>	194
Introduction	194
Hypovolaemia	194
Interaction of Neural and Endocrine Signals	196
Integrative Function of Paraventricular Nucleus	197
Osmotic Dehydration	198
Hypovolaemia	199
Stress	200
Other Elements in Central Neural Control	200
Summary and Conclusions	201
Commentary	203

Chapter 12. Rostro-Sagittal Brain: Site of Integration of Hydrational Signals in Body Fluid Regulation and Drinking

<i>S. Nicolaidis, M. El Ghissassi and S.N. Thornton</i>	207
Introduction	207
Evolution of Ideas	207
Integration of Neural and Humoral Hydrational Signals	208
Electrophysiological Findings on the Integrative Properties of Neurons	209
Convergent Systemic and Gustatory Projection of Sodium Chloride Versus Water Stimulations	209
Integration of Volaemic, Osmotic and Blood Pressure Signals	209
Neuronal Response to Angiotensin II Iontophoretic Application	210
Co-action of Angiotensin and Vasopressin on Neuronal Activity	210

Neuronal Response to Angiotensin and Na ⁺ Iontophoretic	
Application: Peculiarity of Neurons Lining the OCPLT	212
Evidence for an Undescribed Hollow System, the OCPLT	212
Delineation of the OCPLT; the Extent of the Hollow Organ	212
Other Anatomical Features of the OCPLT	215
Drinking and Renal Effects of Angiotensin II into the	
OCPLT	215
Discussion	216

SECTION IV. Neural Organization of Drinking Behaviour

Chapter 13. Sensory Detection of Water

<i>R. Norgren</i>	221
Introduction	221
Oral Sensory Cues	222
Touch	222
Temperature	222
Taste	223
Gastrointestinal Sensory Responses	225
Central Neural Pathways	226
Commentary	230

Chapter 14. Neostriatal Mechanisms Affecting Drinking

<i>T. Schallert</i>	232
Introduction	232
Background	232
Unilateral DA Deficiency and the Disengage Deficit	234
Striatal Unit Activity in Relation to Behaviour	234
Neurons Having a Disengage Function?	235
Neurons Having an "Ignore" Function?	235
Evidence Supporting the "Ignore" Interpretation	236
Preliminary Neural Model of Ignore and Disengage Functions	236
Conclusion	237
Commentary	239

Chapter 15. Drinking in Mammals: Functional Morphology, Orosensory Modulation and Motor Control

<i>H.P. Zeigler</i>	241
Introduction	241
Anatomy of the Oromotor Apparatus	242
Functional Morphology of Drinking Behaviour	243
Similarities and Differences in the Functional Morphology of	
Eating and Drinking	246
Orosensory Systems and the Initiation of Drinking	247
Topography of Drinking Behaviour and the Invariance	
Hypothesis	250
Orosensory Modulation of Drinking Response Topography	252
Conclusions	254

Chapter 16. Drinking: Hindbrain Sensorimotor Neural Organization

<i>J.B. Travers</i>	258
Introduction	258
Ingestive Responses in the Decerebrate	258
Brainstem Rhythm Generator	260
Reticular Formation Location	261
Licking versus Chewing	262
Swallowing	263
Nucleus of the Solitary Tract	263
Interneurons: Medullary Reticular Formation	265
Interneurons: Pons	265
Motor Nuclei	266
Central Representation of Intraoral Receptors	267
Nucleus of the Solitary Tract	267
Parabrachial Nuclei	269
Sensory Trigeminal Complex	269
Midbrain Projections	270
Conclusions	271

SECTION V. Behavioural Organization of Drinking

Chapter 17. Learning, Thirst and Drinking

<i>P.C. Holland</i>	279
Introduction	279
Overview of Learning	279
Kinds of Experience	280
Consequences of Experience: Measurement and "What is Learned?"	280
Associative Learning	281
Learning and the Stimulus Properties of Thirst	284
Thirst Cues as Elicitors of Behaviour	285
Thirst Cues as Reinforcers	286
Thirst Cues as Modulators	287
Learning and the Control of Drinking by Oral and External Cues	290
Recognition, Habituation, and Satiation	290
Conditioning	291
The Future	292

Chapter 18. Effects of Eating on Drinking

<i>F.S. Kraly</i>	296
Introduction	296
The Importance of Food-Related Drinking	296
Stimulus Properties of Food	298
Pregastric Properties	298
Gastric and Intestinal Properties	299
Summary	300
Dehydrational Consequences of Eating	300

Cellular Dehydration	301
Extracellular Dehydration and Angiotensin II	301
Summary	301
Interaction of Stimulus Properties of Food and Postprandial	
Dehydration	301
Learning Processes in Food-Related Drinking	303
Learning about Stimulus Properties of Food	303
Learning about Dehydrational Consequences of Eating	304
Neural Substrates	304
Parasympathetic	305
Sympathetic	305
Brain	306
Formulation	306
Commentary	312

Chapter 19. Inhibitory Controls of Drinking: Satiation of Thirst

<i>J.G. Verbalis</i>	313
Introduction	313
Parenteral Factors Inhibiting Fluid Ingestion	314
Osmolality	314
Extracellular Fluid Volume	316
Preabsorptive Factors Influencing Inhibition of Fluid	
Ingestion	317
Oropharyngeal Factors	317
Gastrointestinal Factors	319
Cognitive Factors	320
Integration: Transient Versus Sustained Inhibition of Drinking ...	322
Parallel Effects of Inhibitory Stimuli on Secretion of Hormones	
Involved in Body Fluid Homeostasis	324
Vasopressin	324
Renin–Angiotensin–Aldosterone	325
Atrial Natriuretic Peptide	326
Oxytocin	326
Relation of Central to Peripheral Secretion	326
Mechanisms of Drinking Inhibition During Thirst Satiation	327
Summary	328
Commentary	330

Chapter 20. Social Influences on Fluid Intake: Laboratory Experiments with Rats, Field Observations of Primates

<i>B.G. Galef, Jr</i>	335
Introduction	335
In the Laboratory	335
Effects of the Presence of Adult Rats at an Ingestion Site	335
Effects of Residual Olfactory Cues at an Ingestion Site	336
Flavour Cues in the Milk of Rat Dams	336
Olfactory Cues on the Breath of Rats	336
Socially Induced Aversions	337
Competitive Enhancement of Intake	337

Summary	337
In the Field	338
Examples of Locale-Specific Differences in Food Selection by Primates	338
Field Observations of Apparent Social Learning about Foods by Primates	338
In Conclusion	339
Commentary	341

SECTION VI. Determinants of Human Fluid Intake

Chapter 21. Bout Pattern Analysis of Ad Libitum Fluid Intake

<i>J.M. de Castro</i>	345
Introduction	345
Experimentation vs Observation	345
Models and Actual Intakes	345
Non-Homeostatic Drinking	346
Bout Pattern Analysis	346
Causal Analysis of Bout Patterns	347
The Diary Self-Report Technique	347
Patterns of Fluid Intake in Humans	348
Separating Food From Fluid Intake	348
Predictors of Fluid Intake	348
Human Fluid Intake Results	349
Patterns of Fluid Intake in Rats	349
Monitoring of Bout Patterns	349
Rat Fluid Intake Results	349
Bout Nutrient Compositions and Fluid Intake	350
Conclusions	352

Chapter 22. Individual and Cultural Factors in the Consumption of Beverages

<i>H. Tuorila</i>	354
Introduction	354
Trends in the Beverage Market	354
Cultural Variations	354
Consumption over Time	356
Sensory Quality of Beverages	357
Composition of Beverages	357
Serving Temperature	358
Consumer Choices Within Beverage Categories	358
Traditional and "New" Alternatives	358
Soft Drinks	358
Milk	359
Coffee	360
Context of Use	360
Consumption at Meals	360

Other Context Factors	361
Summary and Conclusions	361
Commentary	364

Chapter 23. Alcohol- and Caffeine-Beverage Consumption: Causes Other Than Water Deficit

<i>R.M. Gilbert</i>	365
The Meaning of Thirst	365
The Importance of Other Causes of Drinking	366
The Importance of Drug-Containing Beverages in Human Fluid Consumption	366
Ways to Cause Rats to Drink Large Amounts of Alcohol or Caffeine Solution	368
Breed Them for it	368
Rear in an Enriched Environment	368
Restrict the Food Supply	368
Space the Feeding	369
Sweeten the Fluid	369
Restrict Food, Space Feeding, and Sweeten Fluid – All Together	369
Incorporate Alcohol into a Liquid Diet	369
Induce Physical Dependence	370
Provide Superior Company	370
Administer Other Drugs	370
Conclusion	370
Causes Of Human Consumption of Drug-Containing Beverages	371
Alteration of Mood or Behaviour: The Role of Expectancy	371
Dependence and Craving	372
Role of Consumption of Other Drugs: Lifestyle Factors	372
Genetic Causes	373
Palatability	373
Schedule-Induced Drinking	374
Availability	374
Social and Societal Causes	375
Advertising and Other Marketing Methods	376
Conclusion	377
Concluding Remarks	377
Commentary	381

Chapter 24. Environmental and Sensory Modulation of Fluid Intake in Humans

<i>D. Engell and E. Hirsch</i>	382
Introduction	382
Water Availability	383
Unlimited Access to Water	383
Limitations on Water Availability	383
Water Temperature	386
Flavour and Beverage Variety	387
Summary	388

Chapter 25. Physiological Determinants of Fluid Intake in Humans

<i>B.J. Rolls</i>	391
Introduction	391
Cellular Stimuli for Drinking	391
Extracellular Thirst Stimuli	393
Rehydration	395
Ad Libitum Drinking	396
Conclusions	396
Commentary	398

SECTION VII. Variations in Human Fluid Intake

Chapter 26. Thirst and Fluid Intake in the Elderly

<i>P.A. Phillips, C.I. Johnston and L. Gray</i>	403
Introduction	403
Reduced Thirst with Age	403
Effect of Palatability	405
Possible Mechanisms of the Thirst Deficit	407
Satiety and Thirst in the Elderly	408
Conclusions	409
Commentary	411

Chapter 27. The Consequences of Exercise on Thirst and Fluid Intake

<i>J.E. Greenleaf</i>	412
Introduction	412
Fluid Deficits and Electrolyte Balance	412
Combined Stress Factors	413
Thresholds for Involuntary Dehydration	415
Sodium-Osmotic Hypothesis	415
Free Circulating Water	417
Physical Fitness	418
Gastrointestinal Factors	418
Body Temperature	418
Fluid Shifts	419
Summary	420

Chapter 28. Effects of Environmental Stresses and Privations on Thirst

<i>M.J. Fregly and N.E. Rowland</i>	422
Introduction	422
Dehydration-Induced Drinking	423
Effect of Certain Pharmacological Agents on Dehydration-Induced Drinking	425
Effect of Water Temperature on Dehydration-Induced Drinking	427
Heat-Induced Drinking	429

Effect of Certain Pharmacological Agents on Heat-Induced Drinking	430
Thermogenic (Post-Cold Exposure) Drinking	431
Effect of Exposure to Cold on Food and Water Intake	432
Effect of Certain Pharmacological Agents on Thermogenic Drinking	433
Effect of Water Temperature on Thermogenic Drinking	435
Post-Hypoxic Drinking	436
Effect of Certain Pharmacological Agents on Post-Hypoxic Drinking	438
Summary	439

Chapter 29. Effect of Changes in Reproductive Status on Fluid Intake and Thirst

<i>P.H. Baylis</i>	443
Introduction	443
Menstrual Cycle	444
Normal Individuals	444
Cyclical Oedema	446
Pregnancy	447
Lactation	449
Postmenopause	449
Summary	450
Commentary	452

Chapter 30. Disorders of Thirst in Man

<i>G.L. Robertson</i>	453
Introduction	453
Water Balance	453
Definition of Terms	453
Thirst Independent Influences on Fluid Intake	453
Measurement of Thirst	454
Physiology	454
Osmoregulation of Thirst	454
Relationship to Osmoregulation of Vasopressin	455
Hypothetical Model of Osmoregulatory System	456
Relation Between Thirst and Fluid Intake	458
Integration of Thirst and Antidiuretic Mechanisms	458
Pathophysiology	459
Hypodipsia	459
Polydipsia	464
Conclusions	474
Commentary	475

SECTION VIII. A Concluding View

Chapter 31. Thirst and Salt Intake: A Personal Review and Some Suggestions

<i>A.N. Epstein</i>	481
---------------------------	-----

Introduction	481
The Nature of Thirst in Mammals and Man	481
The Biological Diversity of Thirst	483
Biological Diversity Within Species	484
Development and Diversity	484
Sex Differences	485
The Several States of Thirst	485
Angiotensin as a Hormone of Thirst	486
Antidipsogens	488
The Neural Substrates of Thirst	489
Spontaneous or Freely Emitted Drinking Behaviour	490
The Ontogeny of Thirst, Especially in Mammals	491
Salt Intake	494
Salt Appetite	495
Additional Aspects of the Hormonal Synergy	496
Need-Free Salt Intake	496
Subject Index	503
