

Contents

1. Introduction. By S. Geller	1
2. Some Theoretical Aspects of Solid Electrolytes. By H. Sato (With 18 Figures)	3
2.1 Sublattice Disorder	3
2.2 Ionic Motion in Fast Ionic Conductors	9
2.3 Cooperative Motion of Ions	15
2.4 Ionic Diffusion and Conduction in Disordered Systems	21
2.4.1 The Path Probability Method	23
The State Variables	23
The Path Variables	25
The Path Probability	25
Stationary State Condition	26
2.4.2 β' -Alumina	27
The Tracer Diffusion Coefficient	27
Ionic Conductivity	31
2.4.3 β -Alumina	31
References	37
3. Halogenide Solid Electrolytes. By S. Geller (With 8 Figures)	41
3.1 AgI-Based Solid Electrolytes	41
3.1.1 Crystal Structures	41
Rubidium Silver Iodide, RbAg_4I_5	41
Tetramethylammonium Silver Iodide, $[(\text{CH}_3)_4\text{N}]_2\text{Ag}_{13}\text{I}_{15}$	45
The Pyridinium Iodide-Silver Iodide System	46
Silver Iodide Tetratungstate, $\text{Ag}_{26}\text{I}_{18}\text{W}_4\text{O}_{16}$	50
α -Silver Iodide, α -AgI	52
Silver Sulfide Halogenides, Ag_3SI and Ag_3SBr	53
α -Silver Mercuric Iodide, α - Ag_2HgI_4	54
3.1.2 Miscellaneous Compounds Based on AgI	55
3.1.3 Relation of Conductivity to Structure	56
3.1.4 Other Results on RbAg_4I_5 and KAg_4I_5	59
3.2 Solid Electrolytes Involving the Cu^+ Ion	61
3.3 Solid Electrolytes with Fluorite Structure	61

3.4 Other Halogenide Solid Electrolytes	64
3.5 Final Note	64
References	64
 4. Applications of Halogenide Solid Electrolytes. By B.B. Owens, J. E. Oxley, and A. F. Sammells (With 17 Figures)	67
4.1 Materials	67
4.1.1 Silver Ion Conducting Solid Electrolytes	67
4.1.2 Copper Ion Conducting Solid Electrolytes	67
4.1.3 Lithium Ion Conducting Solid Electrolytes	68
4.1.4 Halide Ion Conductors	69
4.2 Electrochemical Devices	71
4.2.1 Electrode Reactions	72
4.2.2 Device Concepts	75
4.3 Primary Batteries	76
4.3.1 Silver-Iodine Solid State Batteries	76
Electrolyte Properties	77
Electrodes	78
Cell Performance	79
Storage Characteristics	82
Atmospheric Degradation	82
Silver Recrystallization	83
Electrolyte Disproportionation	83
Iodine Corrosion	83
Iodine-Silver Self Discharge	84
4.3.2 Lithium-Metal Salt Solid State Batteries	92
4.3.3 Lithium-Halogen Solid Electrolyte Batteries	93
4.4 Electrochemical Capacitors	96
4.4.1 Capacitor Characteristics	97
4.4.2 Cycleability	99
4.4.3 Applications	99
4.5 Solid Electrolyte Rechargeable Batteries	100
4.6 Solid Electrolyte Coulometers (Timers)	101
References	103
 5. The β-Aluminas. By J. H. Kennedy (With 13 Figures)	105
5.1 Chemical Properties of β -Alumina	105
5.1.1 Formation and Fabrication	105
5.1.2 Reactivity	108
5.2 Structure of β -Alumina	110
5.2.1 X-Ray Diffraction	110
5.2.2 Neutron Diffraction	114

5.2.3 Neutron and X-Ray Diffuse Scattering	115
5.2.4 Nuclear Magnetic Resonance	115
5.2.5 Infrared and Raman Spectroscopy	116
5.2.6 Electron Microscopy	117
5.3 Conductivity and Diffusion in β -Alumina	118
5.3.1 Ion Exchange Properties	118
5.3.2 Tracer Diffusion Measurements	119
5.3.3 Conductivity of Single Crystal β -Alumina	120
5.3.4 Conductivity of Polycrystalline β -Alumina	123
5.3.5 Conductivity of Spinel Block Doped β -Alumina	126
5.3.6 Electronic Conductivity in β -Alumina	128
5.3.7 Conduction Mechanism in β -Alumina	129
5.4 Applications of β -Alumina	131
5.4.1 Sodium-Sulfur Battery	131
5.4.2 Other High Temperature Batteries Utilizing β -Alumina	134
5.4.3 Low Temperature Batteries Utilizing β -Alumina	135
5.4.4 Miscellaneous Applications of β -Alumina	135
References	137
 6. Oxide Solid Electrolytes. By W. L. Worrell (With 13 Figures)	143
6.1 Structural Characteristics and Phase Relationships	143
6.2 Defects and Conduction Mechanisms in Fluorite-Type Oxides	145
6.2.1 Defects in Predominately Ionic Solids	145
6.2.2 Defect Equilibria and Conduction Mechanisms in ThO_2	147
6.3 Ionic Conduction in Oxide Solid Solutions	150
6.3.1 $\text{ThO}_2(\text{Y}_2\text{O}_3)$ Solid Solutions	150
6.3.2 Oxygen Diffusion and Ionic Conduction	152
6.3.3 Effects of Composition	152
6.3.4 Effects of Temperature and Oxygen Pressure	154
6.4 Applications of Oxide Solid Electrolytes	156
6.4.1 High-Temperature Research	156
Equilibrium or Thermodynamic Investigations	156
Kinetic Studies	160
6.4.2 Oxygen Probes or Sensors	163
6.4.3 High-Temperature Fuel Cells	164
References	166
 7. Electrochemistry of Mixed Ionic-Electronic Conductors	
By L. Heyne (With 16 Figures)	169
7.1 Thermodynamics of Electronic and Ionic Charge Carriers	170
7.1.1 Carrier Concentrations	171
7.1.2 Disorder and Conductivity Types	173

7.1.3 Graphical Representations, Conductivity Domain Boundaries	176
Electronic Transport Numbers of Electrolytes	177
Domain Boundaries	179
Three-Dimensional Representations	181
7.1.4 Requirements for Low Electronic Transport Number	184
7.1.5 Mixed Conductors with High Electronic Conductivity	185
7.2 Charge Carrier Flow in Mixed Conductors	189
7.2.1 Single Particle Equations	190
7.2.2 Simultaneous Diffusion of Several Types of Charge Carriers, emf of Galvanic Cells	191
7.2.3 Material Transport, Chemical Diffusion	193
The Wagner Treatment	194
7.2.4 Relation between Chemical and Ambipolar Diffusion	197
7.2.5 Influence of Electronic Trapping	199
7.3 Experimental Methods to Separate Ionic and Electronic Conductivity Parameters	202
7.3.1 emf Method of Transport Number Determination	202
7.3.2 Determination of Small Electronic Transport Numbers	204
7.3.3 The Permeation Technique (Static)	206
7.3.4 The Polarized Cell Technique (Static)	207
7.3.5 The Polarized Cell Technique (Dynamic)	210
7.3.6 The Permeation Technique (Dynamic)	214
List of Symbols	217
References	219
 Additional References with Titles	 223
