Part I: Single rigid body

	page
Chapter I: Heavy rigid body	1
A. General solution of the EULER and POISSON equations	1
§ 1. The EULER angles	1
1.1 Definition	1
1.2 The direction cosines of θx , θy , θz as functions of the EULER angles	2
1.3 The components of the angular velocity $\vec{\omega}$ as functions of the EULER angles	3
§ 2. The EULER and POISSON equations of motion	4
2.1 The dynamical equations of EULER	4
2.2 The POISSON kinematical equations	7
2.3 Finding of the first integrals	8
2.4 On the number of independent integrals	8
§ 3. Case of EULER and POINSOT	10
3.1 The first integrals	10
3.2 Symmetric notations for the constants I and h	12
3.3 Calculation of the instantaneous rotation	12
3.4 Calculation of the EULER angles	17
§ 4. Calculation of the POINSOT motion	18
4.1 Introductory remarks	18
4.2 The angular velocity components and the EULER angles	19
4.3 Proper rotation of the POINSOT motion	21
4.4 Precessional rotation of the POINSOT motion	23
4.5 Nutation of the POINSOT motion	24
4.6 Estimation of the validity of the above results	24
4.7 On some finite relations among the EULER angles	25
§ 5. Case of LAGRANGE and POISSON	25
5.1 The first integrals	25
5.2 Reduction of the EULER equations of motion	26
5.3 The sign of the precession	28
5.4 Upper and lower bounds for the apsidal angle	29
5.41 The spherical pendulum	33
5.5 Stability of a particular solution	36
5.6 Cases differing slightly from those of EULER and POINSOT, and LAGRANGE and POISSON	37

§ 6. Case of KOVALEVSKAYA	37
6.1 The first integrals	37
6.2 Introduction of the new variables s_1 and s_2	39
6.3 Transformation of the elliptic differential $dx/\sqrt{R(x)}$	41
6.4 Differential relations between s and x , and s and t	43
6.5 Expressions for p and q in terms of s_1 and s_2	47
6.6 Expressions for r , α , β and γ in terms of s_1 and s_2	49
6.7 Stability of a particular solution	51
6.8 Concluding remarks concerning the EULER and POISSON equations	52
§ 7. Existence of single-valued solutions	53
7.1 Introduction	53
7.2 Existence of algebraic integrals	54
7.3 LYAPUNOV's theorem	56
7.31 Arbitrary initial values	57
7.32 Real initial values	62
7.33 Real initial values with $\alpha_0^2 + \beta_0^2 + \gamma_0^2 = 1$	64
B. Particular solutions of the EULER and POISSON equations	65
§ 8. Particular cases of integrability	65
8.1 Introduction	65
8.2 Case of a loxodromic pendulum	66
8.3 Permanent rotations	66
8.31 The mass center cone and the mass center curve	67
8.32 Special cases $B = C$ and $A = B$	77
8.33 Stability of permanent rotations	78
8.34 Applications to particular cases of motion	90
8.4 Case of STEKLOV and BOBYLEV	92
8.5 Case of GORYACHEV and ČAPLYGIN	92
8.6 Other cases of GORYACHEV, STEKLOV and ČAPLYGIN	95
8.61 Second case of GORYACHEV	96
8.62 Second case of STEKLOV	96
8.63 Second case of ČAPLYGIN	97
8.7 Case of MERCALOV	98
8.8 Center of mass lies in the characteristic plane	98
8.9 Case of N. KOWALEWSKI	99
8.10 Cases of CORLISS and FIELD	102
8.11 Center of mass lies on one of the principal planes of inertia	108
8.12 Regular precessions about nonvertical axes	108
8.13 Case of Mrs. HARLAMOVA	116
8.14 Linear integrals	117
8.15 The principle of gyroscopic effect	120
8.16 Intrinsic equations of motion	120
8.17 Other cases of integrability	120
C. Application of LIE series to the EULER and POISSON equations	121
§ 9. LIE series and their application to the study of motion of a heavy rigid body about a fixed point	121
9.1 Definition of generalized LIE series	121

	Page
9.2 Convergence of generalized LIE series	122
9.3 Operations with generalized LIE series	127
9.4 First integrals of a system of ordinary differential equations . .	128
9.5 First integrals of canonical equations.	131
9.6 First integrals in the problem of motion of a heavy rigid body about a fixed point	132
 Chapter II: Self-excited rigid body	 136
§ 10. Self-excited symmetric rigid body	136
10.1 Introduction	136
10.2 The angular velocity of a rigid body subject to a time-independent self-excitement with a fixed direction in the body.	136
10.3 Formulas describing rotations	140
10.4 The angles of rotation of a rigid body subject to a time-independent self-excitement with a fixed direction in the body.	144
10.5 Self-excited symmetric rigid body in a viscous medium	146
10.51 Equations of motion	146
10.52 The angular velocity of a rigid body	147
10.53 Time-independent torque vector fixed in direction within the body	149
10.54 The asymptotic motion of the spin vector	153
 § 11. Self-excited asymmetric rigid body	 159
11.1 Torque vector fixed along the axis of either the largest or the small- est principal moment of inertia	159
11.11 Torque vector fixed along the largest principal axis . . .	160
11.111 A qualitative discussion of the motion	164
11.112 The motion of the spin vector in the unperturbed case	164
11.12 Torque vector fixed along the smallest principal axis . . .	169
11.2 Torque vector fixed along the middle principal axis	169
11.21 Equations of motion and their integration	169
11.22 A qualitative discussion of the motion of the spin vector $\vec{\omega}$ with respect to the moving trihedral in the unperturbed case	174
 § 12. Approximate solutions.	 178
12.1 Periodic solutions.	178
12.11 Periodic solutions in the case of a time-dependent torque vector fixed along the largest principal axis	180
12.12 Periodic solutions in the case of a time-dependent torque vector fixed along the middle principal axis.	182
12.2 Iterative solutions	183
 § 13. Regulation of rotations about fixed axes by self-excitements with fixed axes	 184
13.1 Time-independent rotations caused by time-independent self- excitement.	184
13.11 Stability of time-independent rotations	187
13.12 Stabilization of unstable time-independent rotations . . .	189

13.21 Time-dependent rotations about fixed axes caused by self-excitements with fixed axes	192
13.22 Time-dependent rotations about fixed axes caused by self-excitements with variable axes	194
Chapter III: Externally excited rigid body	194
§ 14. Symmetric rigid body subject to a periodic torque.	194
14.1 Statement of the problem.	194
14.11 Alternating field parallel to the constant field.	195
14.12 Alternating field orthogonal to the constant field	197
14.2 Symmetric rigid body subject to gravitation and an orthogonal sinusoidal periodic force	202
14.3 Other types of torques	206
 Part II: Several coupled rigid bodies 	
Chapter IV: Gyrostats	207
§ 15. Permanent axes of rotation of a heavy gyrost at about a fixed point	207
15.1 Equations of motion of a gyrost at	207
15.2 Permanent rotations of a gyrost at	208
15.3 Other systems for which permanent rotations are possible	213
15.4 The existence of first integrals	213
15.5 Regular precession of a gyrost at	214
15.6 Equations of motion in terms of non-EULERIAN angles	214
§ 16. Asymmetric body subject to a self-excitement in the equatorial plane	215
16.1 Equations of motion	215
16.2 Symmetric body	218
16.3 Asymmetric body	221
16.4 Gyroscopic function W	224
16.5 Nonstationary solutions for $\vec{\omega}$	226
16.6 Determination of the position relative to a fixed coordinate trihedral.	230
16.7 Permanent rotations	232
16.8 Motions corresponding to the stationary solutions of $\vec{\omega}$	236
Chapter V: Gyroscope in a Cardan suspension	239
§ 17. Aspects of the CARDAN suspension of gyroscopes.	239
17.1 Introduction	239
17.2 Statement of the problem.	240
17.3 Equations of motion and their first integrals	241
17.4 Solution in the case where the axis of the outer gimbal ring is vertical	244
17.5 Regular precessions	245
17.6 Stability in the case where the position of the axis of the outer gimbal ring is vertical	247

	page
17.7 Stability in the case where the position of the axis of the outer gimbal ring is inclined	250
17.8 Gyroscopes subject to various perturbing moments	254
17.9 Gyroscopes on elastic foundations and moving bases	255
17.10 Application to inertial guidance systems	255
Part III: Gyroscopes and artificial Earth satellites	
Chapter VI: Rigid body in a central Newtonian field of forces	256
§ 18. Motion of a rigid body with a fixed point in a central NEWTONIAN field of forces	256
18.1 Calculation of the force function	256
18.2 Calculation of the resultant force and moment	262
18.3 Equations of motion and their first integrals	265
18.4 Stability of rotation of a body fixed at its mass center	270
18.5 Stability of rotation in the case $A = B$ and $U = U(\gamma)$	274
18.6 Stability of permanent rotations	275
18.7 Motion and stability of a gyroscope in a CARDAN suspension	277
18.8 Gyrostat in a central NEWTONIAN force field	279
Chapter VII: Motion of an artificial Earth satellite about its mass center 279	
§ 19. The problem of separating the general motion of mutually attracting rigid bodies into translations of their mass centers and rotations about the latter	279
19.1 Resultant force and moment	280
19.2 Equations of motion	281
19.3 The first integrals	282
19.4 Separation of the system of differential equations of motion	284
19.5 Relative differential equations of motion	286
19.6 The two-body problem	287
19.7 Particular solutions	292
§ 20. Motion of an artificial Earth satellite	297
20.1 Introduction	297
20.2 Equations of motion	297
20.3 Integration of the equations of motion	300
Bibliography	312
Author Index	335
