

Contents

1	Introduction	1
1.1	What is Artificial Intelligence?	1
1.2	The role of Logic in Artificial Intelligence	2
1.3	Logic and computational complexity	6
1.4	The subject of this book	9
1.5	Previous studies	10
1.6	A closer look at the subject of this book	14
1.6.1	Language restriction	14
1.6.2	Theory approximation	15
1.6.3	Linking the two techniques	16
1.7	Possible critics	16
1.8	Who may be interested in reading this book?	18
1.8.1	Prerequisites	18
1.9	Structure of the book	18
1.10	Terminology and preliminary notions	19
1.10.1	Propositional logic	19
1.10.2	First-order predicate logic	20
1.10.3	Complexity classes	22
1.10.4	Polynomial fragments of propositional logic	25

2	Language restriction: Complexity of minimal reasoning	27
2.1	Why non-monotonic reasoning?	28
2.2	Minimal models, circumscription and closed world reasoning . . .	29
2.2.1	Minimal models and circumscription	29
2.2.2	Minimal models and closed world reasoning	31
2.3	Complexity of closed world reasoning	39
2.3.1	Goal of the research and related results	39
2.3.2	Results	39
2.4	Complexity of minimal model checking	46
2.4.1	Goal of the research and related results	46
2.4.2	Results	47
2.5	Complexity of finding a minimal model	49
2.5.1	Goal of the research and related results	49
2.5.2	Results	50
2.6	Circumscription in first-order formulae	52
2.6.1	Goal of the research and related results	52
2.6.2	Results	53
2.7	Applications of tractable minimal reasoning to practical reasoning	54
2.7.1	Non-monotonic inheritance	55
2.7.1.1	Syntax	55
2.7.1.2	Semantics	57
2.7.1.3	Computational analysis	60
2.7.2	Model-based diagnosis	62
2.7.3	Other applications	64
3	Approximation of a logical theory	67
3.1	Logic-based methods for approximation: existing techniques . .	68
3.1.1	Levesque's limited inference	68
3.1.2	Selman and Kautz's Horn knowledge compilation	70
3.1.3	Comparison between the two approaches	71
3.2	Guidelines of a new method for approximation	72
3.3	Approximation of propositional logic	75
3.3.1	Semantics	75
3.3.2	Computational aspects	78
3.3.3	Discussion and examples	80
3.4	Approximate reasoning and non-omniscient agents	83
3.4.1	Syntax and semantics	84
3.4.2	Properties and applications	85
3.5	Approximation of concept description languages	89
3.5.1	Concept Languages	90
3.5.2	First-order generalization of <i>S</i> -interpretations	92
3.5.3	Approximation of <i>ALC</i>	95
3.5.4	Approximation of <i>ALL</i>	100
3.6	Approximation of non-monotonic logics	103
3.6.1	Approximation of default logic	104
3.6.1.1	Preliminaries	104

3.6.1.2	Approximation method	105
3.6.2	Approximation of circumscription	111
3.6.2.1	Preliminaries	111
3.6.2.2	Approximation method	112
3.7	Approximation of propositional modal logics	115
3.7.1	Semantics	115
3.7.2	Properties	118
4	Using complexity results for evaluating approximation techniques	123
4.1	Horn compilation: semantical and computational aspects	123
4.2	Horn GLBs	125
4.2.1	From GLBs to minimal models	125
4.2.2	From minimal models to GLBs	126
4.2.3	Semantical consequences	126
4.3	Horn LUB	128
4.3.1	Horn UBs with a limited number of clauses	128
4.3.2	Dealing with the LUB implicitly	130
4.3.3	Comments on the computational results	130
4.3.4	A semantical remark	131
4.4	Discussion	131
5	Conclusions	133
5.1	Comments on the results obtained	133
5.2	Open problems	135
5.2.1	Complexity of minimal reasoning	136
5.2.2	Approximation of a logical theory	137
A	Appendix to Chapter 2	141
A.1	Appendix to Section 2.3	141
A.1.1	Preliminaries	141
A.1.2	Upper bounds and algorithms for CWR	142
A.1.2.1	Upper bounds of CWR	142
A.1.2.2	Algorithms for computing circumscription	146
A.1.3	CWA	149
A.1.4	GCWA	151
A.1.4.1	Intractable cases	151
A.1.4.2	Tractable cases	152
A.1.5	EGCWA	153
A.1.5.1	Intractable cases	153
A.1.5.2	Tractable cases	154
A.1.6	CCWA	154
A.1.6.1	Intractable cases	155
A.1.6.2	Tractable cases	156
A.1.7	ECWA	158
A.1.7.1	Intractable cases	159

A.1.7.2	Tractable cases	166
A.1.8	Inference of new positive clauses	172
A.2	Appendix to Section 2.4	174
A.2.1	Intractable cases	174
A.2.2	Tractable cases	177
A.3	Appendix to Section 2.5	178
A.3.1	Preliminaries	178
A.3.2	Intractable cases	179
A.3.3	Tractable cases	182
A.4	Appendix to Section 2.6	184
A.4.1	The reduction	184
A.4.2	Example	188
A.5	Appendix to Section 2.7	189
A.5.1	Appendix to Section 2.7.1	189
A.5.1.1	Semantics of NINs	189
A.5.1.2	Intractable cases	191
A.5.1.3	Tractable cases	193
A.5.2	Appendix to Section 2.7.2	194
B	Appendix to Chapter 3	197
B.1	Appendix to Section 3.3	197
B.1.1	Proofs of theorems	197
B.1.2	Reducing S -entailment to S -unsatisfiability	199
B.1.3	Algorithms for testing S -satisfiability	202
B.1.3.1	Resolution and Enumeration	203
B.1.3.2	The algorithm	205
B.2	Appendix to Section 3.4	207
B.3	Appendix to Section 3.5	211
B.3.1	Preliminaries	211
B.3.2	Appendix to Section 3.5.3	212
B.3.3	Appendix to Section 3.5.4	214
B.4	Appendix to Section 3.6	215
B.4.1	Appendix to Section 3.6.1	215
B.4.2	Appendix to Section 3.6.2	217
B.5	Appendix to Section 3.7	218
C	Appendix to Chapter 4	221
C.1	Appendix to Section 4.2	221
C.2	Appendix to Section 4.3	223
	Bibliography	227
	Index	241
